>   The "emotional" aspect of "code testing" comes from Amateurs who get
>thier
>dander up from punk scum NON-licensees who deem it important to suggest THEY
>know what's better for Hams...Code or NO code.

Gratuitous use of pejoratives, even in strong arguments, defeats any "righteousness" of the licensed's opinions.

>   You go away for a few days making this forum tolerable to read (although
>WA8ULX has resurfaced, spamming the NG in your stead) and you return to do
>nothing but resume your campaign of lying and insinuation.

Incorrect on all accounts. My absence of three weeks is irelevant. WA8ULX is apparently a licensed radio amateur and not a part of Roll's message nor my comment to Roll's message. Please refrain from constant misdirection.

>   What a putz.

The word "putz" is a Yiddish colloquialism for 'asshole.' Whether written in Yiddish or American English it is still a pejorative that does nothing for Robeson's cause.

>   Only a lying scumbag like you DEMANDS his "rights" to express opinions
>in a public forum and then sweepingly dismisses as "irrelevant" the opinions
of

>others.

More use of gratuitous pejoratives, again doing nothing for Robeson's case, cause, or obsession.

I simply comment, do not "demand" anything except to try to argue a subject on the subject's merits, not trying to drop into some battle-to-the-death on gratuitious insult hurling.

>   You acknowledge this in no uncerain terms yet you repeatedly deny that
>the FCC has said these very things in other posts. Only when an assertion meets
>YOUR "Message Points" do you do so.

The FCC has stated in Report and Orders 90-53 and 99-412 that it does not consider morse code skill testing to be relevant to its task of regulating US amateur radio. I have written so in the past in this newsgroup several times and will continue to remind others of those public documents.

>   And again you prove how arrogant you are. Not that anyone here is
>surprised.

Incorrect. Robeson does not speak (indeed, cannot) for all readers of this newsgroup.

The code test retention-elimination argument is a volatile one with strong opinions on all sides. Use of personal insults not germane to the subject at hand is the "arrogance" demonstrated. Robeson has demonstrated that in countless displays of misology.

In article <20010609164930.21646.00001115@ng-fn1.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes:

>>Personal experiences do not constitute any reason
>>for retention of "long established" standards in a technically
>>oriented activity that is constantly advancing.
>
>   Sure they do. You yourself go to great lengths to impress us with YOUR
>experiences as if they were some sort of validation that YOUR opinion is
>"more worthy" than anyone elses.

Incorrect. I simply challenged Roll's assertion on requiring all
newcomers to meet "long established standards" of entry; i.e.,
the morse test.

Why should standards continue just because they have never
been removed?

In the beginning of US amateur radio (1912), amateurs and all
other radio services had only OOK CW mode, no bandplans,
hardly any separation of radio services via "bands." It made
sense then to require a test so that interference mitigation
could be done. 89 years later that is no longer true.

>>The USA is in a distinct minority of nations who have established
>>bandplans on HF to favor a minority of amateur licensees.
>
>   Most USA "band plans" were enacted in order to prevent the (then)
>majority of USA Hams from dominating the rest of the world.

What year was "then?" It is obvious that the USA does not
now (2001) have a majority in world amateur radio.

>   And that the United States should "protect" the rights/needs/desires is
>part and parcel of the Constitution of the United States. Have you ever read
>that document, Your Geezerness?

Irrelevant comment and pejorative. I was defending the Constitution
of the United States in military service before Robeson was born.
Gratuitous flag-waving and patriotic trumpeting by someone who
was released from military service (rather than serving a full term)
has no place in discussion of amateur radio testing regulations.

>>>Virtually to a man, the NCTA's insist that they have nothing against
>>>the *use* of CW -- but they strongly object to the only thing that ensures
>>>that CW can continue to be used by a significant portion of hams.
>
>>There is no logical basis, certainly no factual basis for this assertion.

>
>   If YOUR assertion was true Lennie, there would be NO need for almost
>every
>civil rights oriented piece of legislation in teh United States, nor such
>laws
>as the "Americans With Disabilities" act, now would there?

Again irrelevant. The subject of the American Disabilities Act was
not part of either Roll's message nor my comment to him.

Roll made an assertion, based solely on the majority of no-code test
advocates in this newsgroup and illogically connected to the assertion
as if he could predict the future.

>>The FCC decides the "final decision" based on input
>>from all.
>
>   Funny...iin another post you were saying the FCC makes "all" the
>decisions...So which is it, Your Putziness...?!?!

The only US civil radio regulatory agency is the FCC. They make
the final decisions on US civil radio regulations by codifying them
in Title 47, Code of Federal Regulations. Those final decisions are
made after a period of comment by citizens concerning applicable
radio services.

The word "putz" is a Yiddish colloquialism approximately equal
to the American colloquialism 'asshole.' Whether written in
Yiddish or American English, it is still a pejorative. That and an
attempt to mislabel my former occupation as "lower" than it was
is also irrelevant to the subject of the original thread.

After an absence of three weeks it is clear that Robeson is still
incapable of discussing any subject without use of puerile
attempts at insult that have nothing to do with discussions.

There's some dissatisfaction with QST, Ed, but not enough to keep me from
reading it! In fact, when the new format came out a couple/few years ago, I
really liked the look. No, the reason I don't read QST is the same reason I
don't get a chance to watch TV and haven't been able to read the first Harry
Potter book that I bought: I am usually gone from 6:30AM to anywhere between
8:30-11:00PM! When I get to be home, I optimize that time for myself,
hubby, my bird, my min-pin, my garden, and then collapse for sleep! :)

73,
Kim W5TIT

You must have taken the post the wrong way, in your usual manner Dave.  I
don't feel gypped at all with ARRL Membership--was just agreeing with Ed.
Fred Maia charges for his services, ARRL members probably pay some for its
services.  Hence, it all washes out.

Gypped?  If I felt gypped I wouldn't be a member!

Since when has asking for comments on a question been the same as
making a proposal? That question has some merits, especially the part
```

about the once only exam not ensuring a continuing standard. IF Amateurs were only permitted to use commercial equipment then the whole question would be perfectly valid as it works with nearly every other licence.

Yes, I know this is from a "national amateur organisation", but have a read of this for another prespective of the broader picture. No, the WIA isn't part of a "conspiracy". It is too poorly organised to even arrange sex in a brothel, let alone a conspiracy. This is an organisation that rejected having a fee-free Amateur Licence because it would "let in the riff-raff" - I don't think letting all and sundry in is part of its agenda.

Fortunately, I think we can resolve the examination issue to most people's satisfaction without resorting to your special negotiating style.

Mark.

Try it sometime, there are some really nice benefits. You retain the features of the 10 meter rig such as multi-mode capability, any additional filtering, speech processing, etc. Ten-Tec offers the affordable model 1210 and Down East Microwave offers a more expensive line, good stuff.

73 de Bert
KC2HMN

P.S. RCI just cane out with a 6 meter multi-mode rig similar to their RCI-2950 series. It's also "rumored" that RCI, along with RF Ltd., will offer multi-mode 2 meter rigs similar to their current 10 meter offerings. (RCI-2950DX & Magnum 257 respectively) No transverters needed.

Thanks Mark,

"Remember, there was a nifty little idea posted here not all that long ago. It proposed that the "disenfranchised" CBers take the ridiculously easy Technician exam, join The ARRL, and enjoy full voting privileges thereafter. So you see, when that ARRL elected "employee" receives an e-mail from that relatively new Tech, asking what their position is regarding 11 meters...he/she may want to think twice before spewing the usual anti-CBer line. Job security often outweighs strict charter loyalty."

Who was that joker that came up with this ridiculous idea anyway? The ARRL
issue a MOU with an organization "historically" tied to CB?...The ARRL praise a
CBer?...nah, never happen! No Mark, you take care and thanks.

Was listening on and off to the motley creux net on
3.860 (10:00 PM EST) the past few weeknights and they were bein
heavily QRM'ed by a tape player. Music, telephone ringing and
belching & other nonsense. There was some kind of a turf war going
on this spot a year or 2 ago, has it started afresh again?
References made to "frequency X", whatever that is. What gives?
Where's R.H.? This QRM nonsense got to stop before it starts
off like a snowball again!

Bruce, you seem bound and determined to piss of *everyone* here.

If you find Public Service work boring, don't do it.

If you don't find DX news interesting, don't read it (and certainly don't use the outgoing bureau). I was on the DX end of the pile for 13 years and don't recall working you on any band from anywhere.

The technical articles began around the time QST first appeared. Maybe you need to catch up on your reading.

The advertisements are the big marketing scheme. The product reviews tell us what goes on behind the panel.

I'm beginning to suspect that everything is a troll with you. If you are as dissatisfied as you let on, you'd have dropped out of amateur radio years ago.

When you indicate that you are losing money, that indicates some
dissatisfaction. When you compare Fred Maia's $6 charge to the League's
free service and say, "it washes out", that indicates some
dissatisfaction. No one would misunderstand if you'd write what you
mean to convey.

I'm happy that you're happy.

They nailed that guy to a cross after he corrected some problems and
voiced his opinion.  Maybe that's why not so many jump right in and
correct problems these days.

Dwight:

I'm tempted to say, "It's all attitude," but attitude does have a great deal to do with one's ability to learn the code. I had the exact same problem for the entire time of my life when I was also dead-set against the code testing requirements. I couldn't learn it, because I really didn't *want* to learn it! Then, one fine day, I decided that I wanted to be a ham more than I didn't want to learn the code, so I made the further decision to embrace the code, and determined to become a proficient CW operator. That was my epiphany.

My guess is that if you could truly drop ALL of your objections to the code, including any misgivings you have toward code testing --

no matter *why* you have them, and thoroughly give your mind over to the notion that *you* are going to become a proficient CW operator, you will achieve it with greater ease than you ever imagined. Just remember that now that the testing requirement maxxes out at a useless 5 WPM, all the motivation must come from within your own psyche. I know you can do it.

I'm convinced that is correct, based on the simple fact that so very
few persons learn Morse code to productive speeds without study for
testing. There will be a few, for now, but the abandonment of the test
in the general case will constitute the abandonment of radiotelegraphy
in total. In addition, the codehaters will in time demand conversion or
abandonment of the CW/data segments as voice mode congestion increases.

I'm convinced that is correct, based on the simple fact that so very few persons learn Morse code to productive speeds without study for testing. There will be a few, for now, but the abandonment of the test in the general case will constitute the abandonment of radiotelegraphy in total. In addition, the codehaters will in time demand conversion or abandonment of the CW/data segments as voice mode congestion increases. The FCC, clearly not wishing to be bothered, will do the very easiest thing - probably will discard all band mode segments permantntly to 'simplify' things.

ARE you kidding?? FCC has been divesting itself of direct
responsibility for the Amateur Radio Service for the past 20 years. NONE
of the testing responsibility has been retained, and now the license
structure has been trimmed as much as they thought feasable at all, all
the while virtually abandoning all except lip service to "a
fundamentally technical service". Where will it end? I'd hate to guess,
considering the latest news on 'license-free licensing" proposal just
landed in the news.

Evidently you never heard of the term "incrementalism". The more one knows, the better he can communicate. I can damn sure communicate basic information via CW using Q signals, prosigns and other universally known CW shortcuts, with another ham who knows no English, and I knowing none of his native tounge.

But only if he has a fair amount of training and experience in the use of radiotelegraphy. If he happens to have garnered a bit of English as the result of his efforts at international radiotelgraphy, so much the better for the breadth of the vocabulary we would have in common.

It is not at all surprising that you would not know any of this. CW bashers never do.

Doc Williamson isn't the underachiever, Cecil -- you are! Reason?
You have to use someone else as an excuse while whining about
something you don't like! If Dr. W. doesn't want to progress in
ham radio beyond Technician class, that's his choice, and I don't

see anyone here criticizing him for it. After all, he's not in here whining
about code testing, or anything else, for that matter. You would do
well to confine your remarks to your own thoughts, feelings, wishes,
desires, etc., as does everyone else.

Dwight:

Don't look now, but this debate has been raging for one reason and
one reason only -- the NCTA's desire to have the amateur radio
licensing requirements significantly reduced, or changed, by the
reduction/elimination of the Morse code testing requirement. The
notion that nobody is insisting on HF access without meeting the
significantly reduced licensing requirements is one of the lamest
ones I've seen here. Considering the source, I guess I shouldn't
be surprised!

>
>Those who know me well are laughing themselves silly, Bruce. :-)

Bruce/Ed:

I am somewhat of a "yes man" at work, myself -- for a very practical reason: I have a good job, and I want to keep it! And when my "bosses" ask me to do something, its always something completely within my job description, and totally "doable" -- so why should I say "No?" Keep in mind, certain of my co-workers *do* say "No" when asked to do their job -- but due to their seniority, the Union, and the fact that we are employees of an operating division of a state agency, they can't get their funky little butts summarily canned for doing so. I'm not like that, even though I could certainly get away with it, and that fact causes me to be treated better than some employees that are way ahead of me, seniority-wise.

Ed being a "yes man" at ARRL HQ is certainly not an indication of weak character on his part. My point in bringing up the subject is that his "politically correct" stance simply must be considered in the light of the fact that he is, in fact, an ARRL HQ staff member. As such, the nature of his "opinions" is entirely predictable, and therefore, don't carry as much weight as they would if they were in disagreement with "corporate" policy. And, unfortunately for Ed, the only way this can be disproved is for another ARRL current staff member to come into this newsgroup and claim that Restructuring is the worst thing to hit ham radio since TVI -- and THAT is something Ed knows about!

Not to be one to "whine" and not take some kind of action:

Subj: Offensive "Bio" on "QRZ"
Date: 6/10/01 10:27:37 AM Central Daylight Time
From: K4YZ
To: editor@qrz.com
CC: WA8ULX

Dear Sirs,

My name is Steve Robeson. My Amatuer call is K4YZ. I am writing to you today in regards to the "bio" posted by WA8ULX.

Mr. Beynon has chosen to post a comment in his "bio" that I believe is offensive and alienates a large segment of the Amatuer Radio community. Quoted from his page from this morning "One of the only Real Hams left, most of the new ones are CBplussers"

I ask you to please review this, consider it's negative impact on the Amatuer Radio community, and please consider editing it appropriately.

73

Steve Robeson, K4YZ

>Yes, but he acted and corrected the problem.

He used violent methods to eject the dovesellers and money changers. He later cursed a fig tree, and it withered up. He also criticized the actions of those in power. Those in power had him unfairly tried, tortured and executed.

The Book does not tell us what happened to the dovesellers and moneychangers, but it's a safe bet that they were soon back in business in the house of God.

>Unquote.

Fred's been doing this for years. Last time I renewed (1994) I got a letter in the mail from W5YI offering to do it for $5. That was back in Form 610 days, before ULS and all that.

One the one hand, Fred's doing a service by letting hams know their licenses are running out, and helping them through the paperwork. This helps keep the ham license numbers up by avoiding those "ooops"!! expirations. A ham who hasn't modified his/her license in a long time could easily get out of touch with the new system(s), too.

On the other hand, the info in the W5YI letter I got and the ads I've seen avoids mentioning that all one needs to do to renew is to get the correct form, fill it out and send it in. Or do it online.

I remember someone saying there was almost something Darwinian going on - if somebody couldn't figure out the renewal process, they deserve to pay the money.

Maybe - it all depends on the person being tested and the examiner.

To go back and correct/fill in during the "old days" meant you'd have to recognize when ~4 minutes had gone by, then consciously stop copying, ignore the code coming in and go back over the previous copy, looking for things that needed to be filled in or corrected. Pretty steep requirements! Compare that to having an additional minute or so AFTER the code has stopped to go back and fill in or correct one's copy. BIG difference.

I recall that in 1968 and 1970, we did not know what the code test copy would be like, other than that it would be plain English, not coded groups or some foreign language.

Note also that, in the bad old days, one needed 65 consecutive correct characters to get a General, Conditional, or Advanced license. Extra required 100 characters. The Tech had no HF/MF at all, and the Novice was a one-shot license whose ONLY HF privileges were CW.

End result: Going back and correcting/filling in during the test was pretty impractical then. Today, it's a non-issue.

Bill:

If my argument was uncompelling, it is because it didn't pander
to the desires of the lowest common denominator. If you think
there is virtue in doing so, then we'll never see eye-to-eye.

>The fact that YOU needed an afirmative action incentive
>to get you to whatever code level you are at does NOT
>justify the requirement either.

Nor is/was the requirement unjustified because YOU disagree
with my arguments. You can't take anything away from me,
Bill, so stop trying. You're only making yourself look just as
foolish as the usual envious NCTA'er.

Bill, well, it *is* my opinion, but I rather suspect that it is shared by
others as well, much to *your* chagrin!

>If such becomes true, it will because
>YOU and other devotees of CW use gave up on it.

I'm not "giving up" on CW -- I still know it, and still use it. I retain
my proficiency as a matter of personal desire and pride. I am
also spending increasingly more time on PSK31, which is
displacing a considerable amount of my CW operating. Is being
a technically-involved, well-balanced ham the same as "giving up"
on CW?

>Strange that
>all sorts of past technologies are kept going by loyal groups
>of supporters without any mandated requirements needed
>to recruit new participants...archery, muscket shooting, manual
>shift automobiles, etc.

Could it be that a person can learn how to use a bow and arrows,
fire a black powder muzzleloader, and drive a stick-shift car without
learning a completely new and non-intuitive way to communicate?
It takes one heck of a lot more commitment to learn Morse code
at useful proficiency levels than it takes to do any of those other
things. If you're going to compare apples to oranges, you need to
set an orange on the table alongside the apples.

>Why shouldn't morse code use be in
>that same catagory?

It really can't be, because most people need a compelling reason to learn it. I wasn't attracted to Morse code due to it's character or charm as an activity in the class of archery, musketry, horseback riding, fly fishing, painting, or anything of the sort. I wasn't "attracted" to it whatsoever, due to the fact that I had to commit to the challenge of learning it. I can pick up a book, read for a few hours, and then be reasonably safe to shoot a muzzle-loading rifle. I can ride a horse with some rented horse time, the appropriate equipment, and about an hour's worth of instruction. I've already used a bow and arrow with fair success, and without any instruction whatsoever. However, it took me 14 years and one month to learn the Morse code at a speed greater than 10 WPM. Fourteen years of whining about *having* to learn it, and one month of actually learning it. Had the requirement to learn it never existed, the whining, and the learning, would never have happened.

>> I do

>>The fact that this win/win compromise never made it into the final
>>ruling suggests to me that the best interests of the ARS had little to do
>>with the final decision.
>
>More that the proposal wasn't valued as you see it.

Well, certainly not by the NCTA. They hated it, mainly for it's logical simplicity and win/win nature. I received a lot of love and hate mail over my proposal -- but the hate mail is the most interesting, since the senders were truly convinced that I would keep them from gaining Extra-class status for the rest of their lives. I could not help wondering, "Why is that a problem, if they have everything else they need as far as phone privileges is concerned?" The answer -- it doesn't put an end to the class envy of the terminal underachievers, which is the point of the whole debate. It is now socially unacceptable to be more accomplished than the next guy. We must all be equally ordinary, in order to achieve true whirled peas. Well, forgive me, but I don't share the world-view of the weak and unmotivated. And if you can't forgive me, then you'll just have to suffer the fact that I'm here, I have achieved Extra class under the pre-Restructuring requirements, and you didn't and never will. My so-called superiority over you is your problem, not mine. I didn't seek that status for others, I sought it for myself.

>to. So he never will.

Dick:

Sorry, but you simply cannot sell a person short like that. We really have no idea what Dwight is like merely from the superficial glimpse we get on this newsgripe. In fact, there are very few people in this NG I would care to make any permanent judgements about, without getting to know them personally. The thing that amuses me is the way others in this NG think they know *me* so well. The simple fact is, I, and anyone else, can say anything we want to about anything and anyone while safely hiding behind our keyboards. Therefore, I keep this NG, and my participation therein, completely within the perspective of a hobbyist/pastime, and am no more of a saint or sinner here than anyone else is. I have met people in person who I've communicated with on Fidonet and Usenet, and the experience has always been completely different than what I had expected. Therefore, I simply cannot make a statement that Dwight or anyone else can't, or won't, learn the code. I simply don't know that for a fact. And neither do you. The one thing I can

say with certainty is that if they say they don't want to learn it,
they won't -- unless and until they change their mind.

Bruce/Steve:

Personally, I think you're BOTH wrong. Bruce -- you're wrong for putting up that useless comment. Steve -- you're wrong for whining about it to QRZ without making a mature, direct appeal to Bruce to change it or eliminate it, and giving valid reasons for doing so. As we know, two wrongs don't make a right. The question now is, which of you is going to do the right thing first?

Well, I kind of agree with Larry's comment. Actually, Steve should have e-mailed you about it rather than going behind your back, and I honestly don't think the comment in your bio is in anyone's best interest. We have enough flame wars going now - code vs no code, hams vs cbers, even old vs young. I'll throw this out for grins, however. I've seen a lot of suggestions as to how to test and what to test for (yeah, what is a real ham?). One thing I have never seen is community service. Never. Suppose everyone started with a test on law, operating proceedure, and safety. The new novice. From there on, you have to EARN the progression. Maybe after a year of operating in nets (RACES?) designed to provide communications in an emergency, you might progress to the next level (never missing more than one schedule). Perhaps servicemen and women (and those former service folks

with honorable discharges) might get a bump. Actually participating in a
public service event might get you a bump. Actually working and providing
communications during a real emergency?

Probably a stupid idea, actually earning our privileges! How quaint!

The FCC has not made any public statement that it will drop the
code test in the future. That is not "perception," that is the fact
of publicly-available documents from the FCC.

The code test still exists for General and Amateur Extra class
licenses.

>significant economic importance!

There is a general trend in the whole of the US government to
reduce spending. A very small part of this happens at the FCC.

Did the FCC "save a bunch [of money]" due to the 99-412 R&O?

Any accountant surveying the public budget figures of the FCC from the years 1999 through 2001 can see that it did not save a "bunch." [one has to qualify and quantify "bunch"] [the projected budget of the FCC was made available on their website about a month ago]

Restructuring of many radio services was mandated by Congress, not just amateur radio. Restructuring, as needed, will proceed every two years, again by direction of the US Congress.

The FCC's task is in US civil radio regulation, not in the "business" of "making money." Income from certain radio spectrum auctions goes into the General Fund of the USA, not to the FCC.

The National Park Service of the USA governs 192 million acres of national forest land. It does not do that for "economic reasons" but for the entire citizenry to enjoy. In that same manner the FCC regulates the amateur radio service for the enjoyment of citizens, not to "make money."

>without impediment.
>
>   Do you deny this?

Absolutely, by all the USA history texts available. The USA declared its independence in 1776. At that time slavery existed and women did not have the right to vote.

Slavery was not abolished until the ratification of the 13th Amendment to the Constitution of the United States in 1865, 89 years after the Declaration.

The 15th Amendment, ratified in 1870, removed race as a bar to voting rights.

Women did not have the right to vote until 1920 and the 19th Amendment, 144 years after the Declaration of Independence.

Those three amendments, absolute fact, not opinion, destroys the "EVERY" person claim at this nation's "FOUNDING."

Since the creation of Class C and D Citizens Band Radio Service
in 1959, then-long-tenured radio amateurs were adamantly
opposed to non-code-tested "civilians" being allowed to inhabit
a very small portion of the HF spectrum...without being tested.

That resentment grew into a general bigotry that still exists today,
three generations later. QED.

>Doc Williamson isn't the underachiever, Cecil -- you are!

Ridiculous personal attack.

>Reason?
>You have to use someone else as an excuse while whining about
>something you don't like!

Cecil Moore has stated many, many times that "CW is [his]
favorite mode." That is not whining.

Cecil Moore has also stated many, many times that he is
against the morse code test, not the use of morse code mode.
That is not whining.

>If Dr. W. doesn't want to progress in
>ham radio beyond Technician class, that's his choice, and I don't
>see anyone here criticizing him for it.

Roll needs to review his past writings, such as demands that
"Dr. W." be in this newsgroup...or Roll's other comments
denigrating his abilities, experiences, intelligence, knowledge.

>After all, he's not in here whining
>about code testing, or anything else, for that matter.

Discussion, debate, and arguments for or against code testing
is not "whining." The subject can be addressed on its own
without resorting to pejoratives against personalities.

>You would do
>well to confine your remarks to your own thoughts, feelings, wishes,
>desires, etc., as does everyone else.

Ridiculous patronizing of those older than Roll and who have been
in US amateur radio longer than Roll.

Discussion, debate, and arguments for or against code testing
is not "whining." The subject can be addressed on its own
without resorting to pejoratives against personalities.

Xref: archiver1.google.com rec.radio.amateur.policy:23750

In article <9fur01$er8$0@208.206.142.91>, Dick Carroll <dixie@townsqr.com> writes:

> I'm convinced that is correct, based on the simple fact that so very few persons learn Morse code to productive speeds without study for testing. There will be a few, for now, but the abandonment of the test in the general case will constitute the abandonment of radiotelegraphy in total. In addition, the codehaters will in time demand conversion or abandonment of the CW/data segments as voice mode congestion increases.

Carroll's opinion seems based on CW-in-HF as the ultimate achievement in amateur radio...forever.

The federally-required morse code test for a below-30-MHz privilege license is not, nor has it ever been, for "productive speeds" in CW. "Productive speeds" in CW would apply to a commercial radiotelegraphy license or commercial radiotelegraphy proficiency. Amateur radio is, by definition, not a commercial radio activity ("not for pecuniary interest").

It would appear that the only non-amateur radio service still using morse code for communications is Maritime Radio, a distinct minority in the rest of the radio world. Maritime Radio is changing over to voice and data for regular communications and is no longer required to use the 500 KHz International Maritime Distress frequency for emergencies.

Carroll is seemingly afraid of the loss of exclusivity in the EM spectrum for the tested-at-higher-code-rate licensees. It would seem a part of the democratic process that, as more amateurs go to non-CW modes and fewer amateurs remain with CW, the US HF bandplans should be changed to accommodate the majority.

If OOK CW modes have an intrinsic appeal to anyone, those will learn it and become proficient in it without any federal requirement in demonstrated skill through testing. OOK CW skill is not considered as a valid indicator for US amateur radio licensing (stated by the FCC in 1990 and in 1999) but is a requirement imposed by ITU-R S25.5.

>from the most important issue facing Amateur Radio.

I disagree. In order to "care about amateur radio" one has to be in it
via licensing. In order to be licensed with below-30-MHz privileges,
one has to pass a code test.

Amateur radio coexists in the EM spectrum with other radio services.
The original intent of the federally-required code test was to enable
interference mitigation through a common communications mode.
Since there is a dearth of morse code use as communications in all
radio services except amateur and maritime, it is no longer logical
for the federal governments to require any morse code skill in a
license test.

Morse code skills are highly prized by a number of long-tenured
radio amateurs. So much so that they are fearful of loss of their
exclusive EM spectrum subdivisions in the HF bands. This

exclusivity is demanded, almost (to some) as a "noble right" despite the greater use of data and telephony by other amateurs on HF bands as compared to OOK CW modes. This exclusivity came about by man-made regulation changes, not divine intervention. The exclusivity "necessity" (as it is viewed by some of the long-tenured) is artificial, a benefit only for a minority.

One of the rather obvious problems with exclusivity through code skills is the class discrimination of the code skilled as "superior" to others in the hobby. Class discrimination has created the artificial barrier which has morse-code-on-HF as the ultimate attainment in amateurism on one side and radio-as-a-general-hobby-activity on the other side. Newcomers have long since changed from entering US amateur radio as code-tested Novices to the no-code-test Technician class. It took some time for the ARRL to recognize this, but they finally recognized it. The ARRL took even longer to recognize that code skills are not the ultimate achievment in amateur radio but they have not yet moved enough to recognize the majority view of US radio amateurs.

>Your response didn't mention any money that the FCC will make from its change
>to the Amateur Radio Service. In what way do you think that the FCC made
>money from its restructuring of the Service?

It would seem that the FCC is not "making money" by rather saving money through license testing privatization.

Carroll has ignored the fact that the FCC also privatized commercial radio operator testing at the same time as they privatized amateur radio operator testing. There are 9 different commercial radio operator licenses that require testing. Testing privatization removed that field office workload enabling field office personnel to concentrate on the larger non-amateur radio service tasks.

Carroll is incorrect in saying that [the FCC] "retained NONE of the testing responsibility." All question pools must be approved by the FCC before being used. Sub-Part 97.519 (d) indicates that the FCC may, at its discretion, do individual radio operator testing.

Carroll seems to ignore the fact that the written element questions and answers are generated by licensed radio amateurs in the VEC Question Pool Committee. The FCC only specifies the number of test questions per element and a minimum number of pool questions. This seems the idealistic situation of "amateurs testing amateurs" has been fulfilled to a great degree...yet Carroll still complains about the license testing as "being dumbed down."

Larry Roll K3LT wrote:
> Doc Williamson isn't the underachiever, Cecil -- you are!

You're right, Larry. Compared to Dr. Williamson, I am an
underachiever. But then, so are you.

> You have to use someone else as an excuse while whining about
> something you don't like!

I'm happy with things the way they are. It is you who is unhappy
and whines constantly about returning to the past.

> You would do
> well to confine your remarks to your own thoughts, feelings, wishes,
> desires, etc., as does everyone else.

You would do well to stop whining about Dr. Williamson. I know it
chaps your posterior no end to be faced with the fact that a nocode
tech is superior to you, but that's reality, Larry. Live with it.

So why do you and others assert that some people are wanting
privileges without meeting the requirements? As far as I know,
nobody (except a few criminals) have ever obtained privileges
without meeting the requirements. Your strawman argument is
exposed for all the world to see. Nobody demands privileges
without meeting the requirements. Some folks are taking advantage
of their legal rights to petition the FCC to change the requirements.
You are not advocating the denial of their rights as citizens of the
USA, are you?

In article <2UOU6.74509$4f7.5759078@bgtnsc06-news.ops.worldnet.att.net>, "JAMES HAMPTON" <j.r.hampton@worldnet.att.net> writes:

>We have
>enough flame wars going now - code vs no code, hams vs cbers, even old vs
>young.

This newsgroup was created to take the morse code testing issue away from rec.radio.amateur.miscellaneous. If a "flame war" erupts on the code test issue, then it is the fault of an individual who tosses lit personal matches...

>I'll throw this out for grins, however. I've seen a lot of
>suggestions as to how to test and what to test for (yeah, what is a real
>ham?). One thing I have never seen is community service. Never.

That subject has been broached in here before some time ago.

Before going further, let's examine the test itself. An amateur radio license test is required by the FCC as part of its task of regulating US civil radio. Sub-Part 97.1 (a) makes a general statement about radio amateurs serving the public during emergencies. That is all well and good, but amateur radio is not defined as being an intrinsic part of emergency communications. Amateur radio is basically a hobby activity involving radio, licensing required because that activity emits radio energy.

>Suppose
>everyone started with a test on law, operating proceedure, and safety. The
>new novice. From there on, you have to EARN the progression.

This is not a personal attack, but way too many get into the "EARN" mode in regards to a hobby. This is especially ture of the long-tenured radio amateur...who will never have to take another test in their lifetime (if they renew within time). It is way too easy to sit back and write "requirements" for newcomers to fit some personally-defined profile of what-is-good, but much,

much harder to do so from the perspective of what the FCC
requires as part of their regulatory task (the only reason for a
license in the first place).

>Maybe after a
>year of operating in nets (RACES?) designed to provide communications in an
>emergency, you might progress to the next level (never missing more than one
>schedule).

The California state Auxilliary Communications Service provides
an opportunity for those willing to participate in community service
and emergency communications. The ACS is an integrated
organization, not amateur-only, and does not discriminate on
license class or tenure in amateur communications.

>Perhaps servicemen and women (and those former service folks
>with honorable discharges) might get a bump.

My military experience was 1952-1960, three years with a US
Army station ADA. As with many ex-military-communicators,
a "bump" would be relative. There is no "bump" in field radio
while exposed to extreme elements, there is no "bump" in
fixed station radio doing 12-hour shifts.

>Actually participating in a
>public service event might get you a bump. Actually working and providing
>communications during a real emergency?

Does working communications during a major urban-area earthquake
(with complete loss of electrical power for 10 million) constitute a
"real emeregency?" Been there, done that, no "bump" whatsoever.

Some in here have insisted that 17 Jan 94 earthquake in the Los
Angeles area as "not a real emergency." Perhaps others can
define "real emergencies?"   :-)

>Probably a stupid idea, actually earning our privileges! How quaint!

Community service is not a stupid idea. IMHO, having to achieve
licensing and certification and whatever other geegaws go with
such credentialism seems to be a stupid idea. Everyone's
mileage will vary, of course.

I rather like the California ACS idea, total integration of radio and
landline for Real Emergencies, utilizing whatever is still operating
by those who can operate. No class fights, no discrimination,
no nonsense. Flexibility and adjustability to accommodate as
many disaster situations as can be conceived...and do the
training and regular drills for it rather than pointing to credentials
awarded years back with no drills since that time.

Real Emergencies can happen at any time or with only an hour
or two warning (tornados in middle USA). Emergencies aren't

limited to hurricanes that can be tracked for two days or rain storms tracked for 24 hours [the Houston, TX, deluge as a recent example]. "Real emergencies" on the amateur "news" sites seem limited to hurricanes and rain storms...

One doesn't need certificates, credentials, and "earned" credit to prepare for emergencies.

LHA

I can't help but point out that my Southern Baptist preacher used virtually identical words about "being saved" this morning. You continue to appear to be a Morse code cultist, Larry.

May I suggest that you deprogram yourself and take a rational look
at the subject? Asking someone to "give your mind over" is the
brainwashing techniques upon which cults thrive.

If someone suggested that you "give your mind over" to Buddhism, would
you do it? Please stop suggesting that anyone should "give his mind
over" to anything except rationality.

Maybe he is just one of those people who refuses to "give his mind over"
to anything external, Dick. Brainwashing techniques are well understood
in this day and age. Larry should try something else. So should you. How
about a little old-fashioned encouragement?

I believe in peace within ham radio, Larry. I believe in a brotherhood of hams each with identical castefree licenses. When the FCC set up different classes of licenses, they set up class warfare within ham radio. I'm against class warfare and advocate its abolition.

What's *your* excuse.

Which footnote in 99-412 references the Roll "win/win" proposal?

>I received a lot of love and
>hate mail over my proposal -- but the hate mail is the most
>interesting, since the senders were truly convinced that I would
>keep them from gaining Extra-class status for the rest of their lives.

One message is hardly sufficient to show a trend, is it?

>I could not help wondering, "Why is that a problem, if they have
>everything else they need as far as phone privileges is concerned?"
>The answer -- it doesn't put an end to the class envy of the
>terminal underachievers, which is the point of the whole debate.

Class envy is the "point of the whole [code] debate?!?"

>It is now socially unacceptable to be more accomplished than
>the next guy. We must all be equally ordinary, in order to achieve
>true whirled peas. Well, forgive me, but I don't share the world-
>view of the weak and unmotivated.

:-)

>And if you can't forgive me,
>then you'll just have to suffer the fact that I'm here, I have
>achieved Extra class under the pre-Restructuring requirements,
>and you didn't and never will.

Classic puerile "nyah-nyah" heard on every schoolyard each
school day. :-)

>My so-called superiority over you
>is your problem, not mine. I didn't seek that status for others,
>I sought it for myself.

Roll is convinced he has achieved "superiority." He is not
reticent about telling everyone. :-)

The unfortunate part, for Roll, is that the regulations have
changed. Some old requirements are gone. Grandfathering
licenses still exists and Roll will never have to take another
test in his life...provided he renews on time. Roll no longer
can claim any "superiority" under the new regulations nor
does he have the credentials under the new regulations. His
credentials are from a past era in amateur radio.

Sic transit gloria mundi.

> In what way could I not speak out in favor of code testing in the face of that policy?

Think about it, Ed. If you agreed 100% with Larry, would he be saying the same things about you? :-) Larry, et.al. try to find a weak point and attack it, not matter how irrational that attack might seem to be. Never mind that you don't have a real weak point at all. They attack my Morse code skill level. They attack your ARRL employment. They attack Dr. Williamson's silence. They attack Bill's NCI board position. They attack my friend's inability to get past 10wpm. See the pattern? They attack and attack and attack! For them, it's The Crusades all over again. Change "Silence the Jews and Moslems!" to "Silence the "Nocoders and NCTA folk!" For them, it's a Holy War. After all, it's a small change from a Norse god to a Morse god.

You guys are funny-farm material. You really think Ed would be in
trouble at the ARRL if he still supported 5/13/20wpm? I'll bet there
are some ARRL employees who do support 5/13/20wpm. Do you think
they are in trouble? Get real, Dick, or is that too much to ask?

Dick's been reading his Tarot cards again. Baskin Robins would not have

been successful without a governmental requirement to force citizens
to eat ice cream.

That's funny, Dick. 1/4 of those hams are nocoders. 1/4 of those
hams are slow-coders. What kind of psychosis makes you think they
agree with you? I think the FCC has done exactly what the majority
of hams want done.

I didn't go behind anyone's back, Jim. I e mailed a "cc" of the item to this creep and I also published my comments in public.

Nothing was done clandestinely.

I don't really expect "QRZ.com" to do anything about it (who DOES accept any responsiblitiy for ANYTHING anymore?), but at least I took a stand.

     Just like the Chronically Offesnive, scream about "free speech" when one
is called on about thier abuses.  Always makes it seem like some sort of noble
crusade.

    You are just a creep, Bruce.  A functionally illiterate on at that.  I know
it.  I don't expect anyone to do anything about it, but I expressed MY free
speech about it too.

    And trust me, Bruce, you DON'T want ME "sticking" anything anywhere.  If
anyone in this forum knows where to "stick" things with the most effectiveness,
it is I.

Larry, Morse code was extremely easy for me compared to a bow and
arrow and learning to drive a stick shift. I'm sorry it was so
difficult for you that you felt compelled to turn it into a cult.

It took me about four hours to hit 5wpm using Morse code. It took
me tens of hours to learn to drive a stick shift and after tens
of hours trying to hit the broad side of a barn with a bow and
arrow, I gave up on it. Get real, Larry, learning Morse code is
trivial compared to bows and arrows.

>> Congratulations on your years of service. However it does not negate
the FACT that the Constitution of the United States AND numerous seperate acts
since CODIFY the protection of certain minorities or subsets of our society.

>USA history is not a debate subject in here.

We are not discussing "history"...we are discussing the United States' customary protection of the rights of minorities. Nice attempt at redirect.

>>Our nation was FOUNDED on the principle of making sure that EVERY person was allowed the opportunity to express themselves or pursue thier interests without impediment.

>> Do you deny this?

>Absolutely, by all the USA history texts available. The USA declared
>its independence in 1776. At that time slavery existed and women
>did not have the right to vote.

And these injustices were corrected. No one expects taht anyone, even the Founding Fathers to get everything right the first time.

>Slavery was not abolished until the ratification of the 13th Amendment
>to the Constitution of the United States in 1865, 89 years after the
>Declaration

Ooops, you DO agree with me...Thanks.

>The 15th Amendment, ratified in 1870, removed race as a bar to
>voting rights.

Did it again...proved that the United States DOES have a custom of correcting injustices...even when it's a black eye of it's own....

>Women did not have the right to vote until 1920 and the 19th
>Amendment, 144 years after the Declaration of Independence

And AGAIN...! THANKS LEN! I appreciate the help.

There we have it...proof positive from the keyboard of Leonard H. Anderson himself thatit IS the policy of the United States government to protect EVERYONE'S rights...and I think we can expect them to continue this in the future.

>Those three amendments, absolute fact, not opinion, destroys
>the "EVERY" person claim at this nation's "FOUNDING.

Was it PERFECT from the "git go"...?!?! No. No one, least of all me says it was. The wording of the original Constitution and even the Declaration of Indipendence would have SOUNDED like it did, but we all KNEW better.

The United States DID correct those injustices. We can expect them to do so in the future.

Including the rights of those who enjoy using Morse Code.

This was not a "resentment" over testing. It was a well founded expression of concern over putting an allegedly "short range" communications service on a part of the spectrum KNOWN to propagate globally with low power and modest antennas......the kind that would be "allowed" the new service.

>That resentment grew into a general bigotry that still exists today,
>three generations later.

The results of thier concerns was to become manifest. Unless you call what exists between 26 to 28Mhz "acceptable"...?!?!

Where your argument falls down, Dick, is exactly the same techniques can be used with any other digital mode. Is RTTY a language? Is PACTOR a language? Is AMTOR a language? Get real, will you? Any two hams running RTTY can do *EXACTLY* the same thing. Q-signals are *codes*. Prosigns are *codes*. Please learn the difference between a "language" and a "code".

Nobody wants to "remove code". That's just your strawman.

"CAM" <Cecil.A.Moore@IEEE.org> wrote in message
news:3B23F186.8F634FD4@IEEE.org...
> Dick Carroll wrote:

> > Evidently you never heard of the term "incrementalism". The more one knows, the better he can communicate. I can damn sure communicate basic information via CW using Q signals, prosigns and other universally known CW shortcuts, with another ham who knows no English, and I knowing none of his native tounge.
>
> Where your argument falls down, Dick, is exactly the same techniques can be used with any other digital mode. Is RTTY a language? Is PACTOR a language? Is AMTOR a language? Get real, will you? Any two hams running RTTY can do *EXACTLY* the same thing. Q-signals are *codes*. Prosigns are *codes*. Please learn the difference between a "language" and a "code".
> --
> cheers, Cecil
>

I'll go back to my original question, though. Dick mentions that communicating in CW allows for the transmission of basic information [using Q signals, etc.]. Everyone who knows me knows that I made one QSO in CW and that was the night I passed the CW test for my Tech+ license. However, I also don't particularly care for HF communications and mainly for the reason that I got so damned tired of "quickie" RST contacts. That's not a slam on anyone who likes it, is into DXing, etc. It's just not my bag and, therefore, I don't do a lot of HF. (I also don't like the squelch noise).

Now, if CW is more designed for "basic" contacts, not much beyond an RST QSO, then how can it be called the "universal" language? Or, what I mean more by that question is *why* is it called the "universal" language. I am not trying to be argumentative here, I really do wonder. Cecil, I think (I've never done a whole lot of digital modes either) RTTY, PACTOR, AMTOR, etc., do allow for full conversations--*if* once again, two or more people can find a common language among them. So, does this mean that in ham radio, as in the rest of life, there really isn't a "universal" language (except for the language of facial expressions--we all understand them!).

If a 40 year old radio service is "acceptable" to the FCC,
why should it be not "acceptable" to you?

I don't speak for the majority - I stated what I think.
I could be wrong. Could you be wrong?

Guys,

To know Dick Carroll is to love him. Now, you should have plenty of love for the guy, Mark. Take it easy on him though, you might've inadvertently touched upon a good point re. being "jaded." Sit down and think about what life experience(s) it would take to make you that negative angry. Kind of puts it in a different perspective, eh? Now do you feel any emotion from him...or "for" him, yeah...me too. At least he's not difficult to figure out. If all else fails, just treat him like the "code requirement." Give it a little time...and he'll eventually just go away. (BTW, I'm VERY PRO-CW!...the analogy just fit so perfectly.)

Not CB mentality, per se, but a statement demonstrating, tongue in cheek, about the debate taking place here. I do my own thinking and have come to several conclusions:

1. Ham Radio has a problem recruiting new members, especially from the "CB" crowd because they fail to recognize several differences:

A. CB is the first and only contact most of the general public have with 2 way radio. FRS has the potential to become another CB wasteland UNLESS it is stewarded by a responsible public, however, with the limited distance of UHF, we might be spared the indignities which has been visited upon 27MHz.

B. The General public assume all radios are CB and have not a clue about Ham Radio and its licensing requirements.

C. The diehard CB crowd does know the difference but likes to thumb its nose as an earlier postee had said and I was poking at his logic with my tongue in cheek.

D. No enforcement. Riley is a start but 95% has been HAM stuff and if you read the EB website stuff at fcc.gov you will see only a handful of cases. Heck most stuff is ignored and I know this just as well if not better than anyone. See Enforcement below.
E. Very little openess or downright hostility to "CB" type ops. Radio Hobbyists need to be encouraged, not turned off by hostility. A Han raving about "illegal amps" or "freeband" is usually right by it can turn off a person by making the person you are trying to raech very defensive. I do try to explain why certain things such as amps and freebanding are against the rules but leave the personal judgment out as not to turn off the person and make him or her hostile. We could (WE NEED TO) take a page from the CB ops "book" and try to to be more sociable.

2. We need to recruit in unlikely areas:

A. We need to recognize that people need communication.

B. We have a resource to fulfill their personal needs.

C. Once we recognize the first two statements, we need to make ourselves more visable among outdoor and sport enthusaists such as:

1. HUNTERS and OUTDOORS PEOPLE such as hikers, etc.
2. FISHERMAN and BOAT OWNERS

3. BOAT and MARINE SPORT TYPES (ie Sailboats, etc)
4. RVers are a plentiful source for new hams.
5. AARP members (most retired folks are inclined to like a second hobby like Ham Radio.)
6. TRUCKERS (yeah, I know what you think) But these guys and gals have lots of "spare time" if you can call sitting behind a wheel and staring out at the white line "spare time." Ham radio could give a new dimension to their world just as CB does and the question of whether "Business use" is included would have to be defined but a trucker asking for help for breakdown or dirctions over ham sounds like what was intended by "Emergency Communication" inorder to prevent an accident or mishap. Business Communication would have to visited but it can be taught.
7. Anybody else that needs communication (the list is not complete but fuel for thought.)

D. Keep Amateur Radio fresh and exciting for all interests in the hobby, not just DXers, CW, QRP or digital to name a few but to open up new worlds. Share our expertise and learnings with each other and further develop the self pride which comes with being a Amateur Radio Op without gloating or being a snob.

3. ENFORCEMENT

This one of the bright spots in Ham Radio but not without its problems:

1. Most violations so far are low hanging fruit, easy to document, investigate and tend to be open and shut cases. This has kept FCC resource involvement to a minimum and allowed for the most noticiable violations to come to the attention of the FCC via Riley. Our hats should be off to Riley since he other fish to fry at FCC and Amateur Radio is not considered high priority. We are starting to see a change. Thanks Riley.

2. CB on the other hand is such low priority that it doesn't make a blip on the regulatory radar screen. In my area, we had "SUPER KEYCLOWN" who wanted to run power and blacked out the cable for a mile around. One of the neighbors contacted the FCC to no avail since the FCC did send out a form letter to the offender but it was ignored. With no relief in sight, the neighbor got his lawyer on the case and started "sonmething" rolling. The lawyer contacted the offending party by lawsuit and got our offender's attention. The offender wrote to the court and stated he was a "HAM" and state court in Louisiana had no jurisdiction in this case. The Judge agreed since the FCC seemed to have jurisdiction in this matter and he threw it out and the neighbor was now back to square one. Only after Federal Political INVOLVEMENT did the FCC come down to check it out. The FCC guy wasn't happy since he thought 11 meter stuff was small potatos to him. A helluva long time and effort was spent on this character to restore peace to neighborhood. The FCC could have nipped this in the bud if more attention was paid to this part of enforcement.

A. Since CB enforcment is very limited or non-existant most people are inclined to believe the Federal Governemnt is not interested in strict enforcement of Part 95 which appears to be the case except for some noteworthy cases which are reported from time to time.

B. Without enforcement on a general scale, this perception takes hold among the general public. The main cause of the "no enforcement" policy perception is due to closing of some FCC ofices and downsizing along with "resource allocation" policies.

3. What is needed to change the perception on enforcement and would help in resotring some type of order to the radio spectrum:

A. Develop a plan which focuses on:

1. Devote more resources (MORE MONEY) to forming a Spectrum Task Force to get more into flagrant violations.
2. Set up checkpoints for illegal CBs and such at weigh stations and be consistant but not constant. Only a few hours, seize the illegal stuff and issue warnings/fines on the spot, then leave and repeat the process at another location/weigh station. If any BS, just seize the rig under Federal Law. (Called IN REM SEIZURE). Keep this up on steady basis and the illegal amp will disappear. BTW-get the DOT to make a part of their violation code also just like radar detectors and see what happens.
3. Make sure the trucking companies know the score, a fine for repeat customers.
4. Run down the highpower guys with the sophisticated equipment, make your dossier and keep score, bust when in town. Keep tabs on your local radio shops which cater to the outlaw crowd. If a local radio shop is caught selling verboten goods, pull the commercial tech licenses and all other radio licenses since is it in the Public Interest, Necessity, and convienence to have only the persons of the highest integrity workig and performing repairs on radio transmitters.
5. Develop the HR 2346 CB LAW into something workable for local jurisdictions plauged by problem children with proper guidelines and resources.

With consistent, constant and fair enforcement, the problem would not go away but would diminish.

3. This doesn't mean that the Amateur Radio doesn't need further sheparding, we need to develop better reporting and documentation procedures. The OO program needs strengthing and removal from ARRL politics, development of procedures to ensure the local FCC is not kept out to the loop. At present, everything passes by Newington before being forwarded to the FCC in Washington, DC. This delay can cause valuable time to be lost, especially when dealing with time sensitive cases. I knew of some 2 meter bootleggering incidents and the lack of attention let the chance to make an impact pass by before anybody could react.

FINAL NOTE:

The FCC seems to have put some enforcement on the back burner in some
areas and the limited resources simply are not there to help alleviate
the problems. The local FCC ofices must respond to their most pressing
cases and CB along with Amateur Radio rank low when compared to other
radio services and fuctions.

Sincerely
MARTIN N5PZJ

Whooops! Len, you got me there. I had not heard of the California ACS. It sounds like a GREAT idea. As to being prepared for an emergency, there is no better way to prepare than practice. Myself, I have been involved in two emergencies. I was in the Navy at the time. Once, they were shaking everyone out of the rack asking 'can you copy morse code?'. Yep. Seems there was an SOS on 500 KHz and only two of us could actually copy Morse (although you were supposed to copy 16 wpm to graduate from 'A' school). The other was when a typhoon took down the Coast Guard tower on Rota (a small island North of Guam). A chief petty officer and I made contact and when NavCommSta Guam receiver site had problems copying; KG6AAY was asked to pass traffic to ComNavMar directly. The old man himself (Captain DeLaney) appeared at the shack some hours later and secured the 3 operators from all other duties. The hams staffed the shack 24/7 until secured from duty by the Captain. Yep, been there, done that.

As far as grandfathering and never taking tests again. Nope, I let my tickets (1st phone, commercial telegraph, radar endorsement, amateur extra) expire around 1981. I decided to get 'em back (sans the telegraph, of course - no need) in 1993. I hadn't copied Morse since 1969. Hmmmm ... I hope you don't consider any of the tests difficult. While I agree that amateur radio is a hobby, somewhere in there should be public service; then again, most of us are plug-and-play these days. This is not meant as a slam to anyone - I sure wouldn't want to build a transceiver as good (and as cheap!) as the commercial rigs (the $1500 to $2000 range).

73 from Rochester, NY
Jim

ps - I really meant it when I said I like the California ACS idea. If a
group of different people pitched in during an emergency, it would really
take the wind out of a lot of flamers' sails.

From a philosophical point of view, I don't adhere to this communist
notion that there is merit in forcing people to do something because
they will eventually learn to like it. Only people who are too lazy or
incompetent to shows the merits of the activity need to resort to
coersion. Ultimately such things cause more harm than good as more
people end up resenting it than are "converted".

This can be seen by the comparing the number of people who "hate"
Morse compared to those who "hate" any other mode. Guess which one is
hated the most and which one is mandated to get HF access? Of course,
it is absurd to hate a mode, but it does illustrate the problems
associated with using some form of compulsion in an attempt to modify
the beliefs of a person. It often backfires.

> > Interesting that you make no mention of you attempting to learn some

ANY Amateur?? Now that is a bit vague. I can tell you what most people appreciate when they talk to people with another first language, though. It is considered good form to attempt to pick up a few words of their language as sign of respect.

Your attitude reminds me of when I was in the Lourve and this ghastly woman was loudly complaining to everyone with ear shot that the counter attendant didn't speak English (as if we cared). Finally I couldn't stand her grating squarks anymore and I tried to get it through her thick skull that the whole world didn't learn English just for her and if she made a small effort she could pick up enough French to make herself understood. For some reason, she seemed to think that they should learn English so she could be understood. Paradoxically, such people also invariably complain that "foreigners" visiting their own country should learn to speak English!

Which did you know? That I would try to help anyone who wants to learn Morse or that the attempted justification of Morse as "special" was absurd? Or both? ;-)

> We know
> that any logic other than 1100101010001 is beyond you. Sorry for
> upsetting your applecart again. Stuff happens.

Never mind, at least my logic is really logical and demonstrably so - the "universal logic". Just thought I might as well have to have something "universal" to match your "universal language" postulation. ;-)

Mark.

Will that technique get me to 500 words per minute? Will it get you to 60 wpm "with greater ease than you ever imagined?" Of does that technique just happen to work to the level of proficiency YOU have achieved?

Now, Cecil, if every time one of us makes a statement of belief, others claim "Tarot cards," then perhaps none of us should be allowed to state an opinion. Clearly, in Dick's statement, "IMHO" was implied.

What he says has some merit. I am sure that fewer new hams will try CW if they are not tested for it. Unlike Dick, I do not believe that the number will be zero. And unlike Dick, i do not have to call everyone who does not prefer to operate code a "codehater." IMHO, the hate and discontent that is being spread by Dick in a misguided attempt to somehow "save" the mode is turning people away from it. I am pretty sure he realizes this, so I am quite at a loss to explain why he does it.

I agree, and, I will add that in the good old days, it never occured to me to stop copying after 4 minutes and play Wheel of Fortune. :-)

>>The multiple guess tests are about to be history.

>Key words there are "about to be". And the multiple guess WRITTENS are still
>going to be with us...

Yes, they are, an in spite of the opinions of those that want the FCC to go back to secret question pools, they are here to stay. That leaves it up to the Amateur Radi o community to make the best of the pools to be a good test of the body of knowledge we want hams to have to be hams. Clearly, if I could enter ham radio after reading a 4-page study guide, a 350+ question pool to do the same should be able to be made equivalent.

I have been clear about it, Bruce, I will not use my position at ARRL to undermine its policies. But I have been equally clear that I am under no professional obligation to post one word here, so I only post what I personally believe to be true.

Now, as to "yes man," I will send it to my boss so he can get a good laugh. Mark and I have had many an "interesting discussion" and my "rep" at HQ is that of a sometimes very loose cannon. In my dealings with several Board committees, I have no trouble at all speaking my mind and I will gladly tell HQ and/or the Board when I think they are making a mistake.

> By the way since ED claims his Posts are his true fellings then why doesnt
>he put a disclaimer at the bottom of his Posts?.

The usenet convention is that all posts are the personal opinion of the poster, Bruce. Why do you feel that I, and only I, need a disclaimer? I think that most people have no difficulty determining the few instances when I am speaking here with some ARRL authority, such as if I discuss ARRL's policy with RFI, Product Review testing or the ARRL Lab. If you are ever confused, feel free to ask.

However, if it will make you feel better, I will put a disclaimer at the bottom of this post.

Not at all, Bruce. I agree with what Larry said that the FCC saved some small
amount of money by restructuring the Amateur Radio Service.

So that is what "go soak your head" means, eh? I didn't exactly feel scattered, Larry. Petty annoyance was about all the effect it had on me. I am sure he had less effect with than one on others.

Actually, no, I don't get the picture at all, Bruce. I have never told anyone that I am a piano player in a whore house. I have told people that I work at ARRL HQ and that I am happy doing the job I do. I couldn't imagine myself doing anything else. The personal satisfaction I have had leading ARRL's RFI efforts for the past 10 years has been undescribably rewarding.

By my news reader I'm number 2 to respond. You haven't chased
me away because I guess I'm to stupid to run off from somebody
as narrow minded, as you "pretend" to be. BUT you haven't made
me want to upgrade my license and share bandwidth with you!

I left CB (childrens band) to get away from the pain in the***
know-it-all windbags, not to jump into a "higher tech" version of the same.
But once in a while you post something that makes a lot of sense so
you can't be ALL BAD! ;)

Just checked QRZ, Bios still there, what really amazed me was there are 104 Lookups, last time I checked was 1or 2 Years ago, then it was only 20 or 30, I cant understand why so many, I dont get QSL Cards, why heck I dont even send QSL Cards.
I guess QRZ is trying to figure the Odds on someone reading my Bios, I guess there most be Hundreds of thousands of them, so I guess what Stevie figures is when a new Prospect is thinking about become a Ham, they will just Automatically go directly to my call read my Bios, and say since Bruce said that he most be the only real Ham with any real Wisdom, and will just drop my interest in Ham Radio. Yea right, I wonder what the Odds are on this Example, I would figure but I have no Idea what the Total Data Base is.
Now Stevie see how silly your whole premise was.

?? Just what sort of incompetent Southern Baptist preacher you have
there, anyway? Or you just grasping at anything you can use to slam
Larry as usual?
That sort of admonition is used all the time, in about any setting where
it takes determination and dedication to the task before you. That you
would stoop to attaching a religious connotation to it is most
revealing, and of course you set it up for the rest of your abominable
diatribe....

You
> continue to appear to be a Morse code cultist, Larry.

Get this through your granite skull-- THERE IS NO SUCH THING except
within your increasingly feeble mind. Morse code is an acqurire skill
that demands from most people, a concentration of mental assets to
accomplish - so much so that the socalled hams who wail about even a 5
words per minute test claim even that is some sort of extreme burden.

On Mon, 11 Jun 2001 21:34:01 -0500, Martin wrote:

>Setup a checkpoint somewhere in the Mid-West or Great Plains.

Twenty years ago we used to set up checkpoints at the state highway weigh stations and it was like shooting fish in a barrel for issuing NALs.

>FCC finds a driver working for a major line with his soupped up 2950
>sans an AMATEUR RADIO LICENSE and he immediately telephones the US
>FEDERAL ATTORNEY for the State of XXXXXXX to cause to be issued a
>Warrant for the Arrest of the Truck and its Cargo along with all radio
>equipment located thereon.

Dream on, my friend. The fastest that we were ever able to get an In Rem Seizure Order was four hours, and that was a situation where we were getting pressure from the FBI and the FAA because there was actual interference to air traffic communications and I typed the affidavit myself on the U S Attorney's secretary's typewriter and we walked it through the process.

The paperwork is hardly trivial, because it involves a detailed and ACCURATE affidavit from the agent, a seizure order from the Clerk of the Federal District Court, and a Search Warrant from the District Court Judge and then getting the U S Marshal's office to assign a pair of Deputy Marshals to the seizure. (They are as understaffed as the FCC is.)

Telephonic warrants for this type of offense are not issued (except on television).

The usual turn-around time for in rem seizure actions was three days, and that was when the paralegal-in-charge at the Justice Department would accept my completed paperwork with no question or review and we walked it through on the last day.

>The driver has just earned a $10,000.00 NAL to boot. Since the truck
>is now IN REM SEIZED,

The statute authorizing seizure and forfeiture of proscribed radio equipment does not include seizure or forfeiture of the vehicles or structures where the equipment is found. It's hard enough to get most judges to issue the necessary straight seizure warrants - drugs this isn't, my friend.

The trucking industry is dead set against any enforcement action against their trucks and had enough muscle to make sure that the recent legislation giving local governments limited enforcement power was crippled with respect to over-the-road trucking.

>A smooth legal trick would be have the US ATTORNEY for the STATE of
>XXXXXXXXX to enter a deferred consent agreement if this matter does
>not happen agian with this truck line, its employees or contractors.

Dream on, again. The US Attorneys with which we dealt in three states (four Federal Court Districts) were totally uninterested in doing this, and they are the ones who get to pick and choose. Our colleagues across the country had similar experiences, even where the US Attorney was a college classmate of the District Office chief.

When I signed on with the Feds in the 1960s I thought that we could do such things. Boy, was I surprised when reality reared its ugly head.

Dunno, Ed. Suppose you tell us since you're closer to the action.
After salaries, travel, utilities, maintainance of the facility,
insurance and the like, what is devoted to amateur radio? I know there
are far more people working at HQ than in the past and the Washington
lobby has to be maintained. Surely salaries have to be better than they
were when I turned down a whopping $7500 in '75. Have any figures?

Yes indeed it surely is. And you will see not a word posted in response
by W1RFI nor W6RCA. Both will ugnore it and still slam me as some sort
of liar or dreamer for even suggesting such a thing.

"Giving one's mind over" to anything is bad, Dick, whether it's
religion or Morse code. Are you in the habit of "giving your mind
over" to other people? Since you seem to admire "giving your mind
over", how about "giving your mind over" to the NCTA?

> > You continue to appear to be a Morse code cultist, Larry.
>
> Get this through your granite skull-- THERE IS NO SUCH THING ...

No such thing as a Morse Code Cult? Shirley, you jest. You, Larry,
and others are prima facie evidence that a Morse Code Cult exists.
If we only "give our collective minds" over to Morse code, it will
save the world.

Why, that's odd. Not that long ago Lennie the Limp Noodle was holding forth about how well the state's pubsafety communicators were prepared and equipped to handle anything up to and including the "Big One". He must have been doing a laittle surfing and stumbled onto a small dose of reality.

  Popular Communications has always catered to the sleazy side of
communications ("survival" communications, "pirate" broadcasters,
etc), even way back in the mid 80's before the CB'ers you describe
grew up.  Therefore, their support of "freebanders" today is nothing
more than a continuation of that magazine's existing policies - not a
money issue alone.  In fact, if money alone talked at Popular
Communications, I seriously doubt they would carry any of that junk -
they are not exactly a best selling magazine with it's inclusion.
Instead, they seem to have found a niche market that interests them
and that brings in enough money to keep them satisfied.

> [snip] The ex-illegal ops (as well as some
> still active "freebanders") have migrated into
> amateur radio.  [snip]

  I haven't seen any great rush in that direction.  Most of the
"freebanders" I've seen are staying right there on 11 meters.
Instead, of the ex-CB'ers I've seen that have migrated to ham radio,
most have done so because of an aversion to the garbage in the 11
meter band (including the illegal activities of the "freebanders").
And, of those very few new hams who did "dabble" at "freebanding" in
the past, most joined the ham ranks exactly because they rejected that
illegal lifestyle after trying it.  In other words, very few of these
people are a threat to ham radio.

  A rational conversation?  Is that what you call the crap you posted?
 I'm no fan of McViegh, but I found Josh's and Lloyd's comments about
McViegh far less offensive than your garbage.  If that is the best
that you can do, why don't you take your own advice and go away.

I've not done any "laittle surfing" since I don't have a "laittle." :-)

The California Office of Emergency Services is prepared for a lot
of emergencies besides earthquakes. Carroll should educate
himself a bit more instead of living confined in Misery.

Oh, and while a few of us in here were talking about experiencing
an earthquake first-hand, Carroll tried to impress us with his
knowledge of earthquakes gleaned only from books. I was
impressed. About his reading books.

Ahem...don't try a technical snow job here. A 5U4 is a moderate-
current dual diode vacuum tube used as a rectifier. It can't be
"biased." Neither is there anything such as "slider-tuned filaments."

You might recheck suffix letters for tubes...such as the "GB"
version of a 5U4. 5Y3, yes. :-)

>>From my 1958-1959 perspective and memory, there were 11

>forgotten and not a topic today.

CB was hated by most of the long-tenured hams at the beginning
and just about every year afterwards for 43 years. One doesn't
need to be Holmes-less to experience how it was all throughout
the CB (HF classes) history.

>>If such activity is so abhorrent to you, borrow a tape recorder and
>>record the "abhorrent" communications for submittal to the FCC.
>>See the FCC website Enforcement Bureau pages for submittal
>>procedure and requirements.
>>
>I could dump their crap right into my hard drive and e-mail it to
>Riley if I could be even remotely bothered with any such nonsense.

The FCC doesn't want e-mail dumps so much as recordings
of activity. Try to check out the FCC's Enforcement Bureau
page. It will tell you what form and format the FCC wants.

>It's Riley's problem, he's the enforcer and he has radios and tape
>decks out his wazoo, I am not an enforcer, not my problem unless they
>interfere with my comms which they do not. What you are "suggesting"
>here is akin to some FM broadcaster bitching on the behavior on the
>taxicab dispatch freqs. Makes huge "LennySense" as usual.

Translation: Kelly ain't no snitch. :-)

You can translate the CB hatred into something positive and
report infractions. Or you can just continue to mouth off about
it in here without saying anything or mailing anything to the FCC.

Kelly has a choice. Report infractions and crow about it or
button it up and whine, whine, whine.

Oh, and good luck on "biasing" those 5U4s now.   :-)

>grew up.

Agreed, but for some reason I never read a bad word directed at them for their coverage of pirate "broadcast" radio. I've always found that somewhat odd.

>Therefore, their support of "freebanders" today is nothing
>more than a continuation of that magazine's existing policies - not a
>money issue alone.

I'd agree with you, however, during that time period I scoured that magazine for even the most fleeting reference to "alternative" 11 meter operations and trust me...they turned a blind eye toward it. It wasn't until approx. 3 yrs. ago that they started to, at least, provide a little "investigative" reporting re. the subject sans "judiciary robes." They do issue warning re. the consequences though.

>In fact, if money alone talked at Popular
>Communications, I seriously doubt they would carry any of that junk -
>they are not exactly a best selling magazine with it's inclusion.

They were NEVER a "best" selling magazine, they are ,however, a "better" selling magazine with it's inclusion.

>I haven't seen any great rush in that direction. Most of the
>"freebanders" I've seen are staying right there on 11 meters.
>Instead, of the ex-CB'ers I've seen that have migrated to ham radio,
>most have done so because of an aversion to the garbage in the 11
>meter band (including the illegal activities of the "freebanders").

You won't see any "rush," Dwight. I've noticed a gradual migration...but than again, I'm looking for it. In my 150 yrs. of experience, (smile) I've seen many CBers move to the "freeband" because of the "aversion to the garbage" on the 40 channels. With the advent of the cheap (How about $99.99 for a Superstar 3600?) "export" radios, the general CB populace has availed itself to the "freeband." Now, is when the more serious "freeband" ops are again migrating...to the ham ranks. The lids are abhored, however, nobody likes to hear people continously badmouth 11 meter ops, especially with broad general (not to mention dim-witted) comments. This is especially true when they know that there are some pretty damn decent ops on 11 meters, how?...because they've been there. (Remember, the judicial robes are still checked in the coatroom.) The result is exactly what I observed (and so can you) on www.eham.net when currently licensed hams got tired of hearing some of the "callous" general statements re. "chicken banders" and spoke up and defended the idea of "meeting somewhere in the middle."

>And, of those very few new hams who did "dabble" at "freebanding" in
>the past, most joined the ham ranks exactly because they rejected that
>illegal lifestyle after trying it.

NOT!...see above.

>In other words, very few of these
>people are a threat to ham radio.

Agreed...they are the future of ham radio.

Ed Hare can clue you in on just how little power it takes. He holds
some pretty impressive miles-per-milliwatt records.

Mark:

I read plenty of newsgroups to which I rarely, if ever respond to the postings. It certainly is possible that some prospective ham somewhere will read this NG, and, according to Cecil, be totally turned off to ham radio merely by something I've posted here. Right.

Ed:

I don't recall ever disagreeing with Carl on that point. The simple fact is
that you DO occupy a management position on the ARRL staff, and,
as such, your views will naturally be seen as a reflection of the corporate
culture and policies (both internal and external) of that organization. It
may or may not be "pretty" from your side, but from OUR side, it's all
we have to work with. You can't blame us for understanding the nature
of large organizations.

WW:

Well, since you're a licensed amateur, you haven't, in fact, been
"chased away" from ham radio by me, so your response doesn't
put a tick in Cecil's box. Your lack of willingness to upgrade is
more likely due to your own lack of motivation than anything else,
so I'll let that comment go by.

>I left CB (childrens band) to get away from the pain in the***
>know-it-all windbags, not to jump into a "higher tech" version of the same.

Man, did YOU ever get it wrong! Ham radio has a much higher percentage
of "pain in the *** know-it-all-windbags" than any other activity known to man!

>But once in a while you post something that makes a lot of sense so
>you can't be ALL BAD! ;)

Thank you for noticing!

Cecil:

I'm going to assume through your usually slippery answer that you
can't find the requested quote.  Therefore, I obviously never stated that
the "demand" placed on me to learn the Morse code was "sacred" in
any way.  It wasn't sacred, it just got me to do something I had been
reticent to do for a long time.  This "sacred" crap is your own
mental malfunction.  You are forgiven.

Ed:

If the ARRL HQ staff wishes to ignore a significant source of amateur radio
opinion, then I guess there isn't much I can do for them. This newsgroup
provides BOTH sides of one of amateur radio's most controversial issues --
and each side debates with passion, conviction, and intensity. Aside from
the fact that we occasionally run off at the fingertips, I still believe that a
lot
of highly persuasive arguments are made here. I am able to filter out the
"noise," but I don't filter out the arguments of those occasionally making
the "noise" simply because I don't agree with them. I have learned something
from my participation in this newsgroup -- and that is, tolerance for others
who hold a differing point of view. I'm not expecting to receive any credit
for this, but my postings have been drastically "toned-down" over the
years, mainly because I realize that it is all to easy to go into slam-dunk
mode from the safety of your keyboard. A few of us here still have to learn
this, apparently, and I am still not immune from taking the occasional swat.
But, on the whole, I think this newsgroup does provide interesting and
occasionally compelling points of view.

I don't seek to be proven "100% right in everything I've posted." I relate
my experiences in learning the code and mastering the code tests, and
use what I have learned about the Morse/CW mode through first-hand
experience to shape my opinions about it. The unfortunate fact is that the
NCTA's, for the most part, do not have this first-hand experience -- and
therefore, their comments must be seen to be coming from another
place. I recognize that place, because I was here for fourteen years of
my life. That place is laziness, indifference, and a lack of motivation.
These are common behaviors of all people, and I am not being intentionally
insulting by relating them to the NCTA. I'm just telling the truth. Why
the NCTA's consistently ignore this truth is something *they* must
account for, because I cannot.

If any ARRL HQ staffer writes to me and personally expresses his/her

views about the code testing requirements, or lack thereof, I will thank
them for their time, and gladly give an honest and heartfelt reply.

Sure, Dick; if it helps you I will gladly concur that some amateurs came from the ranks of freebanders. If they behave themselves on the ham bands, who is to know -- or care? If it helps you, I will agree that when the code tests are replaced with something more meaningful to modern radio technology, more will enter ham radio. Where you lose me is when you say this is a bad thing and that all those who enter ham radio under such a change will break the rules. Problem here, Dick, is that you embellish my remarks in your own mind then take offense at me for saying what you dream up.

>>what percentage of its resources do you believe are devoted to
>>Amateur Radio?

> Less than 5%

Okay, let's take it line by line and see how this adds up. Give us the percentage of the following that you think is devoted to Amateur Radio:

Contesting Branch
Awards Branch
DXCC
The ARRL Field Organization
The ARRL Clubs program
The ARRL Convention program
ARRL coordination of SAREX
ARRL program on ham radio in the classroom
ARRL Regulatory Information Branch - questions about rules and regulations
ARRL Official Observer/intruder program
http://www.arrl.org
QST articles
QST ads
QEX articles
QEX ads
NCJ articles
NCJ ads
ARRL publications (Handbook, Antenna Book, RFI Book, etc).
ARRL VEC
Publication Sales
Circulations
IS
Comptrollers/Purchasing/Personnel

Shipping and receiving
ARRL Lab
   Product Review testing
   ARRL RFI program
   Spectrum protection
   Technical Information Service - (http://www.arrl.org/tis)

I just went through the HQ building layout in my mind. What percentage of each of these is devoted to the preservation of ARRL vs the percentage devoted to Amateur Radio. Show the math this time, okay? :-)

>But you'll agree that there has certainly been a position shift by the
>BOD?

The former ARRL policy was that it supported the retention of Morse code testing for HF access.

The ARRL Board made a policy that it will not oppose changes to the international treaty requiring Morse code testing for HF access.

The Board also affirmed that it is not changing its policy wrt US testing.

>> the organization and what percentage of its resources do you believe are
>> devoted to Amateur Radio?

>After salaries, travel, utilities, maintainance of the facility,
>insurance and the like, what is devoted to amateur radio?

Are you really offering that paying the salary of people doing things for Amateur Radio doesn't count? They paid my salary when I helped Chris Imlay write the letter to the FCC asking them to take enforcement action against those sellling long-range cordless telephones that operate in the ham bands. Do you think that because the League paid someone to do it, it wasn't Amateur Radio? Are you really offering that travel to an industry meeting, or ARRL convention, is not Amateur Radio? Are you suggesting that the League turn off

the lights? I really can't answer the question, Dave, because I can't
understand it in any context that makes sense to me.

> I know there are far more people working at HQ than in the past and the
> Washington lobby has to be maintained.

There are only a few more staff now than when I started working there over 15
years ago. The DC lobby has been in place all that time. Are you offering that
representing the interests of Amateur Radio in Washington is not devoted to
Amateur Radio?

>Surely salaries have to be better than they
>were when I turned down a whopping $7500 in '75. Have any figures?

I only know the salaries of the Lab staff, and, as a supervisor, I cannot and
should not discuss them on a public forum. If you want a good estimate of the
salaries and benefits, you can get the figures from any of the annual reports.
 Email me at HQ and I will count the number of staff on the HQ phone list, if
you like.

In article <20010611162133.22760.00000641@nso-mk.aol.com>, lenover21@aol.com
(Len Over 21) writes:

>>>The FCC has not made any public statement that it will drop the
>>>code test in the future. That is not "perception," that is the fact
>>>of publicly-available documents from the FCC.
>>
>>Yup.
>>

>>However, the FCC has said that, at present, Morse code testing "serves no
>>regulatory purpose" except conformity to S25.5. Without S25.5, it would be
>>inconsistent with their own statements for the FCC to continue code testing.
>
>Not inconsistent, only a suppostion by some.

How so? It's simple logic:

Axiom: FCC says S25.5 is only reason they keep code test.

Hypothesis: S25.5 disappears sometime in the future.

Conclusion: Without S25.5, FCC would have no reason to keep code test.

Do you think the FCC would keep the code test without S25.5, Len? My good friend K2UNK has assured me that the FCC will be petitioned to remove all code tests if/when S25.5 no longer requires it. How could FCC deny such a petition and still be consistent with their past 10 years of statements re code testing?

>The FCC has not
>attempted to predict its own future decisions well in advance of
>any NPRM.
>

So? They don't have to explicitly predict their actions. The FCC's intended path is clear to anyone who looks at the information in a reasonable manner.

>There is no, repeat no, article among the 11 for amateur radio in
>the ITU-R that prohibits any member administration from requiring
>any code test.
>

So? The subject under discussion is what the FCC will do if/when the S25.5 requirements are no longer a consideration in their decision about code testing. FCC statements for more than the past decade show that the FCC finds S25.5 to be the ONLY reason to keep the test.

>>FCC has repeatedly said that it will not violate S25.5.
>
>So?

Simple: As long as S25.5 is unchanged, FCC will not take further action on the code test issue.

>
>>>The code test still exists for General and Amateur Extra class
>>>licenses.
>>
>>That test has been reduced to the very minimum that reasonably meets the
>>requirements of S25.5.
>
>Incorrect.

No, it's perfectly correct.

> Article S25.5 does not, repeat not, state any code

>rate. There is no, repeat no, "minimum" nor any "maximum"
>code rate specified in S25.5.

For manual Morse use, 5 wpm is very slow, by any reasonable standard. It has long been the absolute minimum standard test used by any country. The consensus of those who are knowledgeable about the subject is that 5 wpm is the very minimum that reasonably meets the requirements of S25.5. Note the word "reasonably".

Do you want a slower test, Len?
>
>>Is there any reasonable doubt that the FCC will remove the code test for all
>>classes of license if S25.5 is eliminated?
>
>Yes. See the latest ARRL BoD policy decision.   :-)

Hope springs eternal, but considering the FCC's statements on the matter, and their actions in the recent restructuring, it is not reasonable to think that the FCC will keep code testing without S25.5 unless something else changes radically.
>
>Let's jump into the hypothesis merrygoround and presume that
>S25.5 is eliminated. If that is done, what is there to prohibit the
>US administration (the FCC for amateur radio) from requiring
>code testing?

Several things:

1) FCC has said that there is "no regulatory purpose" to require such testing other than S25.5
2) At least one group will immediately petition the FCC for code test removal
3) FCC actions of the past decade-plus have all been in the direction of code test removal.
>
>Rhetorical hypothesis. There is NO such prohibition.   :-)

But it is not supported by a reasonable analysis of the facts.

It's true that you never used the word "sacred" to describe Morse
code testing but it seems obvious to me from what you have posted
that you do hold Morse code testing to be sacred.

There are other Morse-style codes (ones that use dit-dah) because not
everyone uses the same alphabet, but to be fair the most commonly used
one is english alphabet. I think the ARRL handbook used to list a few
of the alternate codes such as arabic, but don't quote me on that. I'm
pretty sure that it still lists the extended alphabetic characters
that have attached acutes and graves, etc. that are required in many
european languages.

Morse, itself, provides nothing but an audible symbol for each letter
so I think the "universal language" bit can be more accurately(?)
associated with the abbreviation codes that allow basic contact
information to be transferred irrespective of the languages involved.
Morse and the abbrevation codes are stand alone and can be used
without each other. As you are aware, voice and text (RTTY/packet/etc)
contacts also often use these codes.

However, to call such things a language grossly inflates their
importance. Even the most monosyllabic conversation would fail if it

relied purely on these codes. That is, unless one's converational skills are limited to swapping contact information.

Mark.

The ARRL Lab is a staff of 5, including me. I don't consider any of them to be lackeys; they are all under standing instructions to tell me any time they think I am wrong. They do, and sometimes they are even right. :-)

The pay scale is a "bit" behind normal industry standards for the nature of the work.

I have never sold a t-shirt, Bruce. I have sold a few ARRL memberships, though.

Do you really think anyone is going to believe that the only thing ARRL does is sell T-shirts and magazines, or did you just want to stir up a bit of trouble. This is rrap, Bruce; you are with the big boys so you will have to do a lot better than that!

>near the qualifications needed to work there.

I'm not convinced of that. I think you would do well at ARRL HQ. You have been able to express your ideas here in a productive and reasonable manner. Heck, lately you have been doing better at that than I have; I need another vacation from .policy. I am starting to get testy. :-)

>One of the few things I'm fairly decent at is amateur radio
>history in the USA, both in general and my own personal experiences.

You might want to contact some of the guys on the ARRL Historical Committee. Email me offline, or give me a call at HQ.

> Well, I kind of agree with Larry's comment. Actually, Steve should have e-mailed you about it rather than going behind your back, and I honestly don't think the comment in your bio is in anyone's best interest. We have enough flame wars going now - code vs no code, hams vs cbers, even old vs young. I'll throw this out for grins, however. I've seen a lot of suggestions as to how to test and what to test for (yeah, what is a real ham?). One thing I have never seen is community service. Never. Suppose everyone started with a test on law, operating proceedure, and safety. The new novice. From there on, you have to EARN the progression. Maybe after a year of operating in nets (RACES?) designed to provide communications in an emergency, you might progress to the next level (never missing more than one schedule). Perhaps servicemen and women (and those former service folks with honorable discharges) might get a bump. Actually participating in a public service event might get you a bump. Actually working and providing communications during a real emergency?

Can someone get their licence quicker if they cause the emergency and then help out? Just kidding, but it reminded me of some volunteer country fire fighters a few years ago. One of two of them were setting the fires so they would be called out to extinguish them.

Mark.

Let me get this straight. The No code test agenda is advancing
straight down the track as I want. Indeed, the R&O was even
more than I expected...and being a part of that, stating my
position, makes me look foolish? In your eyes maybe, but
in the world of who is or isn't important to me, I don't
lose any sleep worry about those that oppose my position.

Cheers,
Bill K2UNK

Please provide us with the economics that sustain your
argument. The waivers were handled by the VEs, not
the FCC. Once processed, there wasn't much to do for
a waiver vs any other upgrade.

I actual agree that there will be some people that never
take up code who might otherwise have done so. That

may lower the percentage of morse users, but in the end,
if morse dies it is because hams that loved it let it be so.
Heaven forbid that some morse users may actually have
to "sell" the use of morse to newcomers.

>>If such becomes true, it will because

Actually, I see no reason why a new ham couldn't set up a
sched with another new ham (via phoone) and then agree
to just dive in using morse with a look-up table as a means
to practice.   There is NO minimum code speed to use the
mode.

 So who said you were being dishonest? What was said was that you
wouldn't be on here posting, nor in fact even working at HQ if you were
not completely in tune with the scene there, and if they didn't feel
they could trust you to adhere to the League "line". I believe it even
if you don't.

Interesting thing, however, is that to pass the code tests
for some time, a key has not been needed. When I went
for the 13 wpm, I just spent time using a "morse tutor"
program on my PC and copying ARRL code transmissions.
No key needed...so no key necessary to bury.

I suspect there is a good number of people that can learn
CW very quickly in the same manner as there are people with
inate talents for music, athletics, etc.

>so as to satisfy your silly complaint?

It would seem a nice gestiture to learn to converse in the
language of the ham you wish to contact. Now if all you
need is the QSL card based on the 599 report and exchange
of call signs, then you are right, no language is needed at

all. Indeed, I'd say that almost anyone could view that
basic "contest" exchange of data as not being english at all.

Consider:

CQ CQ CQ de K2UNK K2UNK K
Is there anything particularly of the English language
in that?

Cheers,
Bill K2UNK

>
> What he says has some merit. I am sure that fewer new hams will try CW if they are not tested for it. Unlike Dick, I do not believe that the number will be zero. And unlike Dick, i do not have to call everyone who does not prefer to operate code a "codehater." IMHO, the hate and discontent that is being spread by Dick in a misguided attempt to somehow "save" the mode is turning people away from it. I am pretty sure he realizes this, so I am quite at a loss to explain why he does it.

No, Ed, I don't consider you a codehater, as you're a CW op, I guess. (I have no proof of it, never heard you on, never worked you, even on our RRAP CW net). But all you have to do is read here to see clearly that the many who state for the record they don't object to CW opertions really would throw it away on short notice given any clear opportunity, much less a reason such as "need for more spectrum for SSB". See the post from Mark Little a short time ago for yet another proof.

Hi again Leland,

"Which is what I had originally said. I never said "all" if you go back and reread that post. Those are the "problem" outlaw CBer who will never be interested in Ham Radio, or if they do with end up being a "problem" Ham."

I reread your post and you state "a great many," I was not my intention for you to infer that I thought you had meant "all." My point was solely that while there may be "a great many" exhibiting the behaviour that you'd described, I feel that there are a great many MORE whom do NOT. If you took it that way, please accept my humblest apologies. The problem CBers or hams were problems long before they ever keyed their first mic or "dit-bombed" some poor slob on 75.

"If they had deep pockets there would be little problem now. If you read many of the posts on this news group you will quickly learn that the major problem with FCC enforcement, either Ham or CB, is the lack of enough funds. That can be changed by applying pressure to our congress person(s) to get them to allocate more funds to the FCC with the express understanding it will be used for enforcement of rules and regulations."

Sorry Leland, I don't believe that for a second. I don't want to turn this into a discussion on our country's fiscal health, but if we didn't generate the funds in the past ten years, we'll never do it...at least NOT for the purposes of RF rule/reg enforcement. There's a gent by the name of Ray, W7SNS, who made a sub-hobby of actually documenting and recording "freeband" violations. Actually had a message board devoted to it. He ran into the brick wall of bureaucracy. Like I said, Leland, take your best shot. Just try NOT to end up as sad and disillusioned as Ray. I do report any 10 & 12 meter unlicensed incursions I monitor. I leave the minor league players alone though. (unless they attract my attention by interfering with ham frequencies)

"That's what I like to call the "ostrich syndrome" that seems to plague many Hams. Consider that there are specific rules in Part 97 due to the use of Ham equipment illegally on 11m, namely H.F. amplifiers, which places restrictions on equipment design and sale. Now we are seeing more activity on the 10m band due to freebanders. This is the result of the increase in availability of cheap "export radios", which can be modified to operate on both 10m, 12m and 11m too."

Call it what you will, Leland, but I have over twenty years as both a direct observer as well as participant. The newer crop of "export" rigs are no more sinister than the Yaesu FT-757GX with the "MARS" microswitch nicely tucked beneath that wire bundle. (or we can go further back in time to the legendary "freebander's" choice...the FT-101x series) As for them being much cheaper, point conceded. This is why we have truckers on channel 19 "2 up." I don't lump them (or the nit-wit running a dirty kilowatt on ANY frequency) in the same barrel as the freebander working DX on 27.5550MHz +/- with 30 watts or so.

"Now the question is just how bad, or how long, does the problem have to be before the Ham community pulls its collective head out of the ground and do something about it? What is going on with the 11m band is just a sample of what is spilling over in to the Ham bands. If we don't watch out the "Freebanders" will continue to setup camp on the lower end of 10m, particularly if there is no enforcement action. The same will happen on other bands too, where we will have to deal with bootleggers that have no fear of the law."

One of the points of my original post is that by the time, the ham community will have a sufficient number of ex-freebanders among their ranks. (as if it doesn't already;-))One can only hope that the "been there-done that" crowd will Elmer their ex-breatheren in the right direction. I've already addressed the 10 meter bootlegger issue. Who knows Leland, it may be that chap that used to run those 30 watts on 27.5550MHz that teams up with you at some point in the future to help curtail those 10 & 12 meter incursions. I'd offer you proof, but I think it's way too obvious to even bother.

We disagree on this issue, Leland, but that's ok. It's a nice disussion and no matter what we discuss, right or wrong, time and actions will tell the real story. Take it easy.

73 de Bert
KC2HMN

P.S. Check out that new multi-mode RCI 6 meter rig. Nice addition to the line up.

Ed:

So far, it has worked for me to where I'm good to around 25 WPM,
with occasional bursts up to 30 - 35 WPM during Field Day. I don't
know how it would work toward getting me to 60 WPM, or you to
500 WPM, but I'm reasonably sure that a negative attitude wouldn't
be much help in achieving that goal.

Are you saying that a negative attitude would be preferable, Ed?

>Probably not, Larry, but the multitudes of potential hams that you
>have chased away from ham radio world-wide no doubt would agree.

Cecil:

Hmmm.  Interesting premise.  Let's give this a try:  Anyone out there,
anywhere in the world -- if you were "chased away" from ham radio
due to something I said, over the years, please post a brief message
to this thread so stating that fact.  If I get 10 responses, I will gladly
admit that Cecil is right.  If I even get 2 - 3 responses, I will at least
admit that there is a possibility that he is right.  However, he claims
I've "chased away" multitudes of hams, all over the world -- so if he
really *is* right about that, then this thread should suddenly be flooded
with postings.

OK, Cecil -- it's now up to your "multitudes."  It's put up or shut up
time.

>they are in trouble? Get real, Dick, or is that too much to ask?

Cecil:

Do you think any current ARRL HQ staff employee would be willing to make a public statement totally condemning Restructuring and proposing a return to the pre-Restructuring status quo? I hereby challenge any current ARRL HQ staff employee who feels that way to do precisely that -- preferably in the pages of QST, but I'll accept a posting to this specific thread as long as that person's ARRL employment is clearly identified in the posting along with his/her name and call sign (I'll accept postings from licensed HQ staff only), and their employment can be verified.

I will say right now that it will never happen -- and the reason is because HQ ARRL's corporate culture and internal policies won't permit it. If no such posting takes place within the next week -- more than enough time for the word to get around HQ and the posting to take place, then I'm right and you're wrong. We'll know next Sunday, June 17, 2001. Cutoff time will be 8 PM EDT (2400z).

Bruce:

Well, forgive me, but leaving your bio stand "as is" is definitely NOT
doing the right thing. I don't think the QRZ.COM forum is the righ
place for an "in your face" attack on our fellow amateur radio
licensees, and if Fred Lloyd edits it out of your record, I would not
blame him. After all, you *are* on his turf there. A forum such as this
one is sufficient for me to express my opinions with an occasional
"in your face" bit of rhetoric. And remember -- new hams coming
in now truly are not responsible for the dumbing down of licensing
requirements -- and their status as "CB-plussers" must be left for
them to prove or disprove by their own actions as licensed amateurs.
I do not agree with your statement -- nor do I agree with Steve "blowing
you in" to Fred Lloyd without first giving you a chance to respond to
his comments. His cc: doesn't count in this matter.

Cecil:

Compared to someone with Dr. Williamson's professional-grade technical skills, I'm not even good enough to be called an "underachiever." I'm a non-achiever. However, I am not a professional electronics expert -- I'm an AMATEUR radio operator. Since you have historically refused to comprehend that distinction, I don't think there's much I can do for you.

>> You have to use someone else as an excuse while whining about
>> something you don't like!
>
>I'm happy with things the way they are. It is you who is unhappy
>and whines constantly about returning to the past.

I am not at all unhappy. I have achieved the highest status available in amateur radio, and did so at a time when the requirements were both meaningful and readily achievable. Now, they have just been dumbed-down to insignificance. No future hams can become my FCC-certified equal, much less my superior, because the mechanism to do so no longer exists.

>> You would do
>> well to confine your remarks to your own thoughts, feelings, wishes,

Yes, it is a reality, and I have no problem living with it. Dr. Williamson has superior technical knowledge than my own. However, as a no-code Technician, he is not even my equal as a licensed radio amateur, and now, unfortunately, never can be. Surely, he can gain the same operating privileges, but not under the significantly more challenging licensing system I and the others who achieved Extra class in the pre-Restructuring era have mastered. If there is something anyone here has a problem "living with," that's it, and you're the one with the problem. I won't speculate about Dr. Williamson until he comes into this newsgroup and expresses his own thoughts.

>Never mind that you don't have a real weak point at all. They attack my
>Morse code skill level.

Cecil:

Don't look now, but where and when have I ever "attacked" your code skill level? I don't even know what your code skill level is. You could be capable of 50 WPM, for all I know. Provide quotation, please.

>They attack your ARRL employment.

I never "attacked" Ed's ARRL employment. I've mearly pointed out certain realities of corporate/organizational life to which Ed is not immune, and therefore blunts the impact of what he says here.

>They attack Dr. Williamson's silence.

Again, no. We're attacking your use of him as an example in your postings, when he is obviously capable of speaking for himself. It was you who choose to introduce him by name, therefore you bear the responsibility for any second-hand "heat" he gets here.

>They attack Bill's NCI board position.

Again, provide quotes. I've never attacked Bill's position on the NCI Board, because I just don't deem it to be something significant enough for me to bother "attacking." If memory serves me right, I do, however, recall noting that NCI did succeed in getting ham radio code testing requirements "dumbed down" to 5 WPM while the FISTS organization just sat on their thumbs and let it happen.

>They attack my friend's inability to get past 10wpm.

Provide one single quote specifically from me where I attack your friend (Dr. Williamson, presumably) for his inability to get past ten WPM. Just one. Produce, or you're lying.

>See the pattern? They
>attack and attack and attack! For them, it's The Crusades all over again.
>Change "Silence the Jews and Moslems!" to "Silence the "Nocoders and NCTA
>folk!" For them, it's a Holy War. After all, it's a small change from
>a Norse god to a Morse god.

What I truly suspect is that Cecil just put a big dent in his cache of spoiled grape juice. Stay off the road until you sober up again, Cecil.

Cecil:

Well, my experience with stick-shift vehicles, archery, and the Morse code were just the opposite of yours. The first car I ever drove with a stick shift was my then girlfriend's '65 Mustang coupe, which had a 200 c.i.d. 6-cylinder engine and a 3-speed on-the-floor. I literally just got in behind the wheel and drove it away. It was one of the most intuitive things I'd ever tried. I was exposed to archery at a young age in the usual way -- Boy Scout camp. After my first afternoon of serious, uninterrupted practice, I was hitting the two center rings of the target at 50 yards while the others were still working at 25 yards. I tried a compound bow for the first time last fall at the Dover AFB archery range -- after almost 25 years of never picking up any kind of bow. In around two dozen shots, I was putting nice tight groups into the 50 yard target. We all know the story of how I got into the Morse code, so I won't bore you with it again -- but it's different than those other things I tried because it wasn't intuitive -- it required motivation, concentration, and a dedicated effort for me to master. However, once I reached a level of useful proficiency, it got progressively easier, and the enjoyment kicked in. I just wish that others, in this post-Restructuring era, could be encouraged to give it a try...but in the absence of the requirement, that won't be happening very often in the future.

Well as I said before Larry I forgot it was there, it was original put there about 2 or 3 Years ago as a Joke, and I dont make it a habit to run to QRZ to check Callsign, probably havent been there since I put it there, but since it is and it upsets Little Stevie Im not about to take it down, and about the cc of Stevies, it just shows the type of person he really is, hes like the little Boy in School who use to run to the Teacher and say Teacher, Teacher, Johnnie did this, really I think its kinda cute, I couldnt stop laughing after I read his Post.

Hey guys thanks for the fun this weekend, you to Stevie. With all the Rain and

flooding we have had this weekend it was getting Borring, you guys made for a
fun weekend and rather Cheap Fun at that.
I will try to get back next Weekend if Im not out having fun.
Well got to get ready for Monday morning have a Plane to catch in the Morning
for a meeting next week in Conn, stupid Company meeting, if I have a chance
this week I will try and check in from Conn.
Again thanks for the FUN Filled WEEKEND you guys are really funny.

Interesting. I know the absolute best QSOs I have had are those that
involved a long, long exchange between me and the person on the other end.
I really enjoy hearing from people of other countries, or even areas in the
US, and learning of their bird's eye view there. In fact, that is one of
the reasons my husband enjoys FSK so much. The very first contact he had
was with a guy over in Japan and they talked for about an hour the first
time around!

Yup.

However, the FCC has said that, at present, Morse code testing "serves no
regulatory purpose" except conformity to S25.5. Without S25.5, it would be

inconsistent with their own statements for the FCC to continue code testing.

FCC has repeatedly said that it will not violate S25.5.
>
>The code test still exists for General and Amateur Extra class
>licenses.

That test has been reduced to the very minimum that reasonably meets the requirements of S25.5.

Is there any reasonable doubt that the FCC will remove the code test for all classes of license if S25.5 is eliminated?

You didn't say anything about removing a code test. In your question,
you implied they were going to "remove code". They are not going to remove
code. You and I will still be free to use Morse code even after S25.5 is
history and the FCC drops the Morse code requirement.

I'm not going to waste my time digging up your old postings. You said that you would always be a superior ham to me because you passed a 20wpm exam and I didn't.

> I never "attacked" Ed's ARRL employment.

Yes, you did, Larry. I was born at night but it wasn't last night.

```

"Second-hand heat" is an attack, Larry.

Look up "they" in the dictionary, Larry.

Nice try, Larry, but foolish. You already chased them away so they
don't read this newsgroup anymore. You have to poll the *past* readers
to prove anything.

Seems we have our hands full worrying about amateur radio, Dick. The Bible
says to remove the log from your own eye before worrying about the speck
in someone else's eye.

Unfortunately, there is a slight flaw in an otherwise good plan. If
they have been chased away from Amateur Radio, they wouldn't be
bothered reading AR newsgroups to respond, now would they? ;-)

Mark.

And others simply never get the hang of operating a clutch. I think there is as much variation on how "intuitive" Morse code is to people as there is variation in the ability to learn how to operate a clutch.

Driving a car is literally a life-and-death situation every day, yet I know of no state that still has a test of the most basic and fundamental skill of operating a manual-gear transmission.

Good analogy, Larry; thanks for bringing it up. :-)

Either that or no one at ARRL HQ but me regulary reads r.r.a.p. Most of them chide me for wasting my time here.

I thought about this a bit more and I agree with you -- a negative attitude is harmful and desctructive and tends to have the opposite effect that the person exhibiting it intended.

Can I presume that you will learn from your own words and stop being negative on this forum?

Uh, Larry... I think that those that are chased away would not be here -- they were chased away.

How about you restate the same question in more general terms and post it to sci.electronics?

>much less a reason such as "need for more spectrum for SSB".

As a CW op, all that I would ask is that the allocation for modes be fair. This evening, start tuning your receiver on 4.000 MHz and tune downward. Let me know when the band gets real quiet and tell me which mode is getting the short shrift here.

At a necessary bandwidth of 100 Hz for a CW contact (easy math -- the real necessary bandwidth should be a bit smaller), I count room for 1,225 CW QSOs on the CW/data part of the band. Let us know tomorrow how many were actually occurring.

>So who said you were being dishonest? What was said was that you wouldn't be on here posting, nor in fact even working at HQ if you were not completely in tune with the scene there, and if they didn't feel they could trust you to adhere to the League "line". I believe it even if you don't.

The major flaw in your logic is that my posts here are NOT in complete agreement with the current ARRL policy. The current policy is that ARRL supports the retention of Morse code testing for US HF access. I will take no steps to undermine that policy, but am perfectly free to discuss with hams what I believe should occur in the future.

There are people at HQ that feel that Morse code testing should be eliminated entirely; there are people there who feel that 20 wpm should have been kept. I am among the latter, based on the views I sent to Tom Frenaye prior to the restructuring.

If the only people ARRL could hire are those that believe that there should be four classes of amateur licenses, with a 0,5,5 and 12 wpm code tests, hiring would be rather difficult.

I recently hired someone in the Lab and the subject of his views on restructuring didn't come up. I suspect that his views are different than mine. He is as free to discuss his views as I am to discuss mine. I KNOW one of the other Lab guys' view are very different than mine, based on a few late-night discussions we have had in the Lab. They are irrelevant to the job.

To most of us at ARRL HQ, Dick, there are much more important issues that a restructuring that has been in place for over a year.

In what way are the merits or demerits of my views changed because I work at ARRL HQ? If I have a good idea, it is still a good idea; if I have a bad one, it is still bad.

The only attempt I see at blunting is coming from those who want to use any technique they can to cast doubts on me when I make a particularly good point. WA6VSE used to do that when he tried to convince people that the only reason I said something was because I worked for ARRL HQ. See that pattern here, Larry?
It ain't a pretty one from this side.

>>Those who know me well are laughing themselves silly, Bruce. :-)

>I am somewhat of a "yes man" at work, myself -- for a very practical
>reason: I have a good job, and I want to keep it!

Trust me, Larry; being a "yes man" on rrap is not on my job description. I keep my job by doing it well, not by posting, or not posting, on rrap.

>And when my "bosses" ask me to do something, its always something
>completely within my job description, and totally "doable" -- so why should I
say
> "No?"

My boss has never once asked me to post anything on rrap. It is not in my job description, so this really is a bit moot.

>Keep in mind, certain of my co-workers *do* say "No" when asked to
>do their job -- but due to their seniority, the Union, and the fact that we
>are employees of an operating division of a state agency, they can't
>get their funky little butts summarily canned for doing so.

ARRL is not unionized, and it it were, I would be management, not union. And Mark and I, or Dave and I, or various ARRL Board members and I have had a number of instances where I disagreed with them. Sometime I win; sometimes I lose. And most of the time, when I lose, I have been wrong.

If no one accepts your challenge, what that would be more likely to prove is
that no one is bothering with rrap.  From what Jon told me the other day, the
news feed no longer includes rra.  When I started posting from home, I think no
one else was reading it.  Of course, you are free to claim that it "proves"
anything you like.

Why don't you claim that unless each ARRL HQ staffer personally writes you and
gives you their view, you have been proven to be 100% right in everything you
have ever posted. :-)

C'mon Ed, you already know the answer to this one. The League has itself in the unenviable position of trying to please the core membership, the newcomers (the membership of tomorrow) and the FCC. It is an impossible balancing act. Apparently the board is hoping to take its cue from the political animals in Washington by use of an inordinate amount of mumbo-jumbo.

As K3FK often remarked during our Helsinki luncheon bull sessions, "There comes a time when organizations forget about their purpose and begin to focus on maintaining the organization." There are times when I think the ARRL has reached that point.

Those would be the ones who would likely be interested in getting a Ham ticket. I have talked to a few like that. They get sick and tired of the crap on 11m, both in and out side of the official 40 channels. Some also worry about getting nailed running power and freebanding too. Now that the license requirements have changed, specifically the code test, more are now interested in getting legal.

I remember having a conversation with the guy at the local CB/stereo shop, where I had them pull the power cables through the fire wall in my van for my rig and power amps I would install myself later. The one shop tech said he would really like to get his Ham license because he was tired of bootlegging. I didn't ask him exactly what he meant by "bootlegging" but I have a good idea, and since he was very interested in getting a Ham license I just told him about the recent license testing requirement changes being made. That seemed to be news to him, which surprised me since it was talked about in just about every radio magazine for weeks.

I think the test requirements have done more to scare off potential Hams than attract them, specially the code test. Almost every time I mention to somebody about getting a Ham license the very first thing that gets asked is "do I have to pass a Morse Code test?" Almost nobody asks about the written exams. Seems like Ham Radio has an image problem where most of the general public thinks of Ham Radio operators as some old guy pounding away on a telegraph key. Even some of the CBers think that way too. Some of them are smart and hard working people, but have no use for Morse Code either, and mention that as a reason for not getting a license.

> If you took it that way,
> please accept my humblest apologies. The problem CBers or hams were
problems
> long before they ever keyed their first mic or "dit-bombed" some poor slob
on
> 75.

There was another poster, a short while back, that had a good idea of extending a welcoming hand to CBers from the Ham side of the fence. It's a good idea not to treat CBers as low lifes, but on the flip side it has to be a two way street where the CBers have to clean up their act, and gain a healthy respect for Part 95 rules, which governs their operations. Until that begins to happen I doubt that much in the way of attitude will change on the Ham side of the fence. With the current conditions on 11m many Hams, I suspect, consider CBers a menace rather than another person interested in two-way radio as a hobby.

As I stated before, I doubt they will do anything.

Secondly, the MOST they would (could?) do is prevent you from posting "bio" items again. The rest of the "database" is public information derived from your license.

Lastly, all we can do is hope. America is already rife with offensive punks like you. Time to stop tolerating your ilk.

For the same reasons that slavery was "acceptable" for 200 years in the United States, but now it is not...because accepting something that is NOT right, regardless of how long tenured it is does not MAKE it right.

>Whooops! Len, you got me there. I had not heard of the California ACS. It sounds like a GREAT idea

It is, Jim...it's an outstanding system that integrates countless assets into a well oiled machine.

However...the defining factor here is MONEY! California, if it were an independent country, would have one of the top-10 (per TIME magazine, I think...) Gross National Products in the world.

That kind of tax base can buy a LOT of toys. Most of the other States of the Union don't have that luxury.

>ps - I really meant it when I said I like the California ACS idea. If a
>group of different people pitched in during an emergency, it would really
>take the wind out of a lot of flamers' sails.

It WOULD be nice...and lots and lots of people in Amatuer Radio are quick to state that Public Service is an important resource....UNTIL you try to get them out to help.

Talking the talk is easy.....Walking the walk is not.

Bullshit once more: If the FCC hadn't taken 11m away from ham radio
and handed it to the Class D CBers hams wouldn't have given a patoo
about it. Like hams didn't give a patoo about the establishment of the
462mHz CB band.

More bullshit. The "bigotry" has nothing to do with "history", has
everything to do with being able to cruise 27 mHz right now this
afternoon to witness the abhorrent behavior on that band.

That was a rather long post. I may have missed it while quickly scanning
through it, but it seems you put the weight of the whole monkey,
enforcement, on the back of the FCC. The problem with your idea is it does
nothing to address the idea that people think it's OK to freeband, bootleg,
run amplifiers, etc. on 11m, but just don't let the FCC catch you. There are

far too many CB operators out there that advocate doing just that. So you can have all the draconian enforcement you want, BUT until people get it in their head that the Part 95 rules should be observed, and are there for every ones good nothing will change. I think that is one of the prime differences between CB Radio and Ham Radio. As Hams we know the rules, Part 97, while they may prove to be a limitation at times for the most part we abide by them instead of ignoring the rules when they get in the way. The same can't be said about CBers and Part 95.

The only chance I see for 11m getting cleaned up is through efforts of the few remaining legal CBers who have had enough of the illegal CB operator, and starts to reform the mentality of the "typical illegal CB operator" to a more rule observant one by peer pressure. When you have magazines like "Popular Communications" that featured an article about a CB Radio "Keydown", CBers running huge mobile amplifiers, without a single word of condemnation would seem to signal it's OK to thumb your nose at the FCC and Part 95. As far as I can see there was no social responsibility shown by the after mention magazine, and particularly the author of the article. This is just one example of what, how, and where things must change. While the total elimination of any illegal activity can't be done it can be greatly reduced. That can only happen if the attitude of the people can be changed, and the illegals find themselves in a tiny minority. The resulting tiny minority of illegal CB operators would then be a good target for the FCC to focus their enforcement efforts on.

> Yes, it does. It is international law. Would you ahve the United States break the law?

Adherence to ITU-R S25.5 is an agreement. US law specifies that US radio amateurs must take a code test to obtain a license with below-30-MHz privileges.

Robeson wants to break a Constitutional guarantee of free speech. Twice. The first occurred on 25 January 2000 and the second a day ago. Both occasions were attempts to block a citizen's rights of free speech. QED.

>
> This was not a "resentment" over testing. It was a well founded expression of concern over putting an allegedly "short range" communications service on a part of the spectrum KNOWN to propagate globally with low power and modest antennas......the kind that would be "allowed" the new service.

Nonsense. In 1959 there was out and out resentment by the then-long-tenured US radio amateurs of taking away "their" band (the small band known as 11 meters) and "giving it away" to the "illiterate" civilians. They demanded, not insisted, that all who dare enter into sacred HF territory be first code-tested and pass a written test to "properly" receive a "valid" license.

Robeson was not aware of this at the time, being around 4 years old.

There was little outcry by the then-long-tenured about round-the-world propagation of this new Citizens Band Radio Service. The outcry, indeed hue-and-cry, was about the "despicable" government action of taking away a "sacred" band and giving it away to "civilians" without any license test at all!

>>That resentment grew into a general bigotry that still exists today,
>>three generations later.
>
>   The results of thier concerns was to become manifest. Unless you call
>what exists between 26 to 28Mhz "acceptable"...?!?!

Which of four radio services is Robeson talking about?

How has Robeson's life been disturbed by any of the four radio services using that 2 MHz of HF spectrum?

On the contrary, Robeson's writing indicated everything was perfect.
See "EVERY" person. [Robeson's own capitalization] The founding
of the USA excluded women from voting, did not prohibit slavery,
allowed race to be a bar to voting. "Perfect" for "every" citizen of the
United States? Far, far from it.

>The wording of the original Constitution and even the Declaration of
>Indipendence would have SOUNDED like it did, but we all KNEW better.

Robeson is awash in patriotic double-talk and flag-waving emotion.
Robeson cannot possibly "KNOW better" anything that happened
in 1776 or 1791 except through recorded history. This "American
history" and "constitutionality" is all misdirection to steer discussion
into an area that Robeson claims some sort of expertise. He does
not have American history expertise.

>   The United States DID correct those injustices. We can expect them to do
>so in the future.
>
>   Including the rights of those who enjoy using Morse Code.

Why then did Robeson seek to remove First Amendment rights
of another citizen on 25 January 2000 and yet another a day
ago? Answer that on "constitutional" grounds.

Let's clear the air here and rip out the false bunting of "patriot
games." No one, repeat, no one, is attempting to "ban" the
use of morse code mode in US amateur radio if that mode is
allocated in the US amateur radio service.

The discussion is about the morse code TEST for an amateur
radio license (capitalization mine). Removal or retention of
the code test. Test.

In article <1ZTU6.75050$4f7.5810946@bgtnsc06-news.ops.worldnet.att.net>, "JAMES HAMPTON" <j.r.hampton@worldnet.att.net> writes:

>Whooops! Len, you got me there. I had not heard of the California ACS. It
>sounds like a GREAT idea.

The California Office of Emergency Services Auxilliary Communication Service isn't ideal and may not be "great" but it is realistic in organization considering the overall communications infrastructure, both civilian and government, and the possible emergency situations in this state. For a direct view of the ACS, access:

http://acs.oes.ca.gov/

...and click on the Links button for a menu of text descriptions. This site has some pages under reconstruction at the moment.

I've posted this link before and generally received several depreciatory comments about California itself, "left coast," "fruits and nuts" remarks...the usual from east-coasters. California is a large state (30 million population, the most of any state, a full day's drive from north to south borders) and has had its share of a variety of emergencies and natural disasters. The California Office of Emergency Services (www.oes.ca.gov) is the umbrella organization incorporating the ACS and covers a variety of emergency situations. I think it would be worthwhile for other states to consider the ACS for their own state's emergency preparedness.

The usual remark seen and heard regarding disasters is "the 9-1-1 system always fails and hams have to step in to take over." This is almost a rote mantra among hams and totally ignores the total communications infrastructure existing in any state...wired, radio, whatever. Each state has many, many different forms of communications available in disasters and emergencies plus the assistance of FEMA and the state National Guard. Most of those communications are quite robust and designed for more severe environments than the usual amateur radios (National Guards use military radios). In the total number of communications, amateurs are actually in a minority but are quite useful when the existing public safety groups are busy with a large-scale disaster.

The unexpected may happen as in the case of the 17 Jan 94 Northridge Earthquake when the entire local electrical power grid was tripped off before 5 AM (partially-fallen Pacific Intertie

MHV tower). The primary power to a service area of about 10 million was cut off. How many hams had their own emergency power backup? The Los Angeles area public safety services were prepared for such events and functioned properly. The fire departments, police were linked in backup by leased telephone lines that did not route through teleswitch centers (no overloading from large volumes of calls). The "useless" telephone system does have the capability to dial up public safety workers from certain locations...although the quake did quite well to wake everyone up. :-)

Combine the violent shaking with a total loss of electrical power (no street lights, nothing but a few early-morning vehicle headlights visible) in the normal sleeping hours and you have a situation of sudden borderline panic. The only thing holding anyone together in function is preparedness, training, and practice. There is no warning of such an event, no chance to assemble in a normal manner while NOAA tracks some hurricane or tornado or rainstorm for hours.

How many radio amateurs boosting emergency "service" to the community have auto-start power generation capability? If they don't have such automatic starting, do they have flashlights to see the generator and do they have adequate fuel for it? Can they operate mobile if not equipped for emergency electrical power? If they have mobile radios can they get a vehicle out of a garage or car port clear from any wreakage of that housing? If they have HTs are they prepared to network HT to HT to HT without repeaters? Note: If cell phone towers are toppled it is very likely that the ham repeater towers are all toppled (seldom as robust as the commercial tower structures).

It is one thing to sit solo in front of a radio and dream about emergency preparedness...or to gas off in a newsgroup or club meeting with the brag "we are prepared, bring it on" when there is no preparation, no planning, no practice, no backup-after-backup thoughts.

The old phrase of the 1930s "CW gets through when nothing else will" but it does NOT hold true without electrical power.

>think...) Gross National Products in the world.

Incorrect. As far as GNP, California-as-a-nation would rank about 17th,
not in the "top 10."

The state of California has a 30 million population and is the most
populous of all 50 states. Given such a large population it is not
inconsistent to have a high budget with large total tax income.

>   That kind of tax base can buy a LOT of toys. Most of the other States of
>the Union don't have that luxury.

"That [large] a tax base" is apportioned to all the citizenry. In order
to make Robeson's statement true he would have to use a per capita
value for "toys" [equipment] based on a total state income.

Good luck on this one now...

Not inconsistent, only a suppostion by some. The FCC has not
attempted to predict its own future decisions well in advance of
any NPRM.

There is no, repeat no, article among the 11 for amateur radio in
the ITU-R that prohibits any member administration from requiring
any code test.

>FCC has repeatedly said that it will not violate S25.5.

So?

>>The code test still exists for General and Amateur Extra class
>>licenses.
>
>That test has been reduced to the very minimum that reasonably meets the
>requirements of S25.5.

Incorrect. Article S25.5 does not, repeat not, state any code
rate. There is no, repeat no, "minimum" nor any "maximum"
code rate specified in S25.5.

>Is there any reasonable doubt that the FCC will remove the code test for all
>classes of license if S25.5 is eliminated?

Yes. See the latest ARRL BoD policy decision.   :-)

Let's jump into the hypothesis merrygoround and presume that
S25.5 is eliminated. If that is done, what is there to prohibit the
US administration (the FCC for amateur radio) from requiring
code testing?

Rhetorical hypothesis. There is NO such prohibition.   :-)

Class A and B CB (the UHF CB bands) were created in 1958 before
the class C and D HF bands were added.

From Kelly's vast life experience in the amateur radio of 1958-1959
he should be able to pull out more definitive "patoos" by "hams" of
that era...and reference them somehow. Where was all the
experimentation and such on UHF in 1958-1959? Using 6J6 dual
triod oscillators with Lecher Line tuning?   :-)

From my 1958-1959 perspective and memory, there were 11
then-long-tenured hams of my acquaintence (I worked for two
of them then) who were adamantly opposed to the whole idea
on the basis of (1) License testing lack; (2) Morse code testing
lack; (3) "Stealing" a "sacred" ham band and "giving it away."
All eleven had one to all of those reasons.

>>That resentment grew into a general bigotry that still exists today,
>>three generations later. QED.
>>
>More bullshit. The "bigotry" has nothing to do with "history", has
>everything to do with being able to cruise 27 mHz right now this
>afternoon to witness the abhorrent behavior on that band.

The discussion on CB started with its creation in 1959, not about
"today."

If such activity is so abhorrent to you, borrow a tape recorder and
record the "abhorrent" communications for submittal to the FCC.
See the FCC website Enforcement Bureau pages for submittal
procedure and requirements.

Good luck on this now...

You wonder what "secrets" he took with him to the grave. Things we will never find out now since there is nobody to ask about the so called second person in the rent-a-van. Only McViegh could have answered that question. He reminds me of those suicide bombers in the middle east quick to die for their cause. He was just a little too "agreeable" to get the poison needle, not putting up a fight to stop or delay his execution, maybe to protect others that were involved but never found.

To me, it is a lot more apparent that the League believes it can better plan a
position wrt Morse code testing after the international issues are settled when
it knows exactly how those international issues will be settled and what rules
changes are actually put on the plate.

The closest I think they will come to a balancing act is that I can't imagine
that ARRL will initiate the request for rulemaking. :-)

```

>Yup. Been over the top for sometime.

What percentage of ARRL's resources do you believe devoted to maintaining the organization and what percentage of its resources do you believe are devoted to Amateur Radio?

I have to agree with you these guys should worry about something that makes
a difference to ham radio like educating the new breed of ham coming into
the amateur ranks since they are really dumbed down. Hell some Generals or
higher don't even know how to check swr that's is a sad state of affairs for
Ham Radio, Not what he has written in his qrz profile. If you don't like
what he has in his bio don't read it. 2 Candy asses Steve and Larry. Look
who is calling who a coward.

> When you have magazines like "Popular Communications" that featured an article about a CB Radio "Keydown", CBers running huge mobile amplifiers, without a single word of condemnation would seem to signal it's OK to thumb your nose at the FCC and Part 95.

If I may play Devil's advocate at this point. After all, there has been mention of the "demonization" of CBers in this thread. The reason that 11 meter (including freeband) activity is receiving more coverage in the aforementioned periodical (as well as CQ Amateur Radio...gotta pay close attention to the fine print, Leland) is because the 11 meter ops of the mid 80s (freebanders VERY much included) have since settled down, grown up, are earning a decent living, and are, quite frankly, PAYING THE BILLS! That's right, it's there because the subscribing "constituency" has demanded it's inclusion. Much in the same way that they "demand" that "export" and easily modifiable rigs be available. Money "pays the bills" and bull$**t walks.

> As far as I can see there was no social responsibility shown by the after mention magazine, and particularly the author of the article. This is just one example of what, how, and where things must change.

Social responsibility?...While I commend your taking the "high" road, I must remind you that the word "social" is derived from "society." Why Leland, things ARE changing. That particular publication is responding to it's responsibilty to the segment of "society" that "pays the bills." Want to change that? Encourage more hams to subscribe and then they can "demand" a change in the editorial style and format. It's much the same with the idea of "11 meter enthusiasts" joining The ARRL. Complain and quit the league? Great, make room for another 11 meter voice. Admonish Pop'Comm for catering to their subscribers without subscribing yourself?... great, then the "freebanders" really do call the shots. Why?!...ready...that's right...THEY'RE PAYING THE BILLS!!!

>While the total
>elimination of any illegal activity can't be done it can be greatly reduced.

To steal a quote from Robert Deniro..."If you were gonna do it, you'd have done it already!" Like I said Leland, take your best shot. If you can make a real dent, I'll be the first to salute you. Just don't end up like W7SNS and end up wasting perfectly good time that you could've been otherwise enjoying. Unless, that is, you plan on similarly turning it into a sub-hobby onto itself.

>That can only happen if the attitude of the people can be changed, and the
>illegals find themselves in a tiny minority. The resulting tiny minority of
>illegal CB operators would then be a good target for the FCC to focus their
>enforcement efforts on.

Quite the opposite has occurred. The ex-illegal ops (as well as some still active "freebanders") have migrated into amateur radio. I was involved in a thread on www.eham.net not too long ago. (as a matter of fact, it was Mark's proposal) After the initial barrage of anti-CB rhetoric, more than a few hams actually came to Mark's defense...openly admitting "freebanding" in the past. Some of the "old guard" actually commented that they never thought they'd hear the day when licensed amateurs would admit to "freebanding." (as if it wasn't always happening...ding-a-ling-a-ling, the alarm clock's sounding; Time to wake up!) Some even suggested that Riley should "retro-punish" these hams, based on their open admissions. You're right, Leland. Attitudes have changed, just not the way you'd like. It's not Kansas anymore and presently the only "good target for the FCC to focus their enforcement efforts on" is STILL licensed amateurs. You think this is happening now, just wait till' they completely drop the code as a requirement for HF access, possibly as soon as 2003. TODAY will be "the good old days." Take it easy Leland.

In article <20010611104739.11416.00004415@ng-mp1.aol.com>, k4yz@aol.com (Steve Robeson K4YZ) writes:

> However...the defining factor here is MONEY! California, if it were an independent country, would have one of the top-10 (per TIME magazine, I think...) Gross National Products in the world.
>
> That kind of tax base can buy a LOT of toys. Most of the other States of the Union don't have that luxury.

1998 values of GSP (Gross State Product) in The World Almanac of 2001 (a newsstand annual publication) and the 1999 values (Almanac) of state populations can be used to show a GSP-per-person that is useful in seeing how a state can afford emergency preparedness. Dividing the GSP by population yields an average of $33,230 per person among the 13 states in the following table -

	GSP/person (dollars)	
CT	43,297	(1.303 x Average)
NJ	39,199	
NY	38,843	
NH	34,388	
MN	33,815	
CA	33,188	(0.999 x Average)
GA	32,589	
TX	32,209	
MD	31,864	
RI	30,676	
PA	30,349	
TN	29,103	
MS	22,463	(0.676 x Average, Mississippi being a "poor" state)

Note that Georgia is very comparable with California with a 98.2% GSP/person compared to CA. California has a GSP/person only 1.14 times that of Tennessee. Doing an average of GSP/person of all 50 states yields a value very close to these 13.

Note also that small-area Rhode Island has a GSP/person very close to the average value of the 13. This sort of comparison and ranking is not perfect but it does show a remarkable similarity of the ability to equally build a "luxury" state emergency infrastructure.

Good luck on the claim that California "can afford luxury" above "poor" states...

> I've posted this link before and generally received several

> depreciatory comments about California itself, "left coast," "fruits and nuts" remarks...the usual from east-coasters. California is a large state (30 million population, the most of any state, a full day's drive from north to south borders) and has had its share of a variety of emergencies and natural disasters. The California Office of Emergency Services (www.oes.ca.gov) is the umbrella organization incorporating the ACS and covers a variety of emergency situations. I think it would be worthwhile for other states to consider the ACS for their own state's emergency preparedness.
>
> The usual remark seen and heard regarding disasters is "the 9-1-1 system always fails and hams have to step in to take over." This is almost a rote mantra among hams and totally ignores the total communications infrastructure existing in any state...wired, radio, whatever. Each state has many, many different forms of communications available in disasters and emergencies plus the assistance of FEMA and the state National Guard. Most of those communications are quite robust and designed for more severe environments than the usual amateur radios (National Guards use military radios). In the total number of communications, amateurs are actually in a minority but are quite useful when the existing public safety groups are busy with a large-scale disaster.
>
> The unexpected may happen as in the case of the 17 Jan 94 Northridge Earthquake when the entire local electrical power grid was tripped off before 5 AM (partially-fallen Pacific Intertie MHV tower). The primary power to a service area of about 10 million was cut off. How many hams had their own emergency power backup? The Los Angeles area public safety services were prepared for such events and functioned properly. The fire departments, police were linked in backup by leased telephone lines that did not route through teleswitch centers (no overloading from large volumes of calls). The "useless" telephone system does have the capability to dial up public safety workers from certain locations...although the quake did quite well to wake everyone up. :-)
>
> Combine the violent shaking with a total loss of electrical power (no street lights, nothing but a few early-morning vehicle headlights visible) in the normal sleeping hours and you have a situation of sudden borderline panic. The only thing holding anyone together in function is preparedness, training, and practice. There is no warning of such an event, no chance to assemble in a normal manner while NOAA tracks some hurricane or tornado or rainstorm for hours.
>

>

True, commercial towers are often 'larger', but sometimes their size may also be their downfall. A 40 foot self-supporting tower would not have to be nearly as large at the base as a 100 foot self-supporting tower. Some of our local repeaters are located on commercial towers - perhaps halfway up. At this point it is conceivable that a large wind or ice storm could take down part of the tower and leave the amateur installation intact (obviously, you can't loose the bottom half and leave the top untouched!). In any case, there is safety in numbers. Even if 80% of the amateur installations are taken down and only 40% of the commercial, it is nice to have some of the amateur installations left to fall back on. Despite the heavy infrastructure of internet, telephone, microwave, and so on - the ice storm in the northeastern US and Canada a few years back pretty well destroyed that infrastucture. They were asking for mobile HF hams! Regardless, as you well stated, all the brag and talk won't help. It is for that reason in particular that I hate to see the animosity between CBers and hams. Despite the limited range of CB, they have numbers. In the same sense that a higher percentage of amateur installations may be taken out, the numbers help make up for it. Frankly, if I was drowning I wouldn't much care what class ticket (if any) someone else held! You mention the emergency power. This certainly is nice, but a mobile HF rig would likely do as well in a pinch (sure, you won't make DXCC with it - but that isn't the point). Certainly the mobile HF would have some serious advantages over an HT (if all the repeaters were out - and especially so if everything was out in a 100 mile radius). These are, of course, rare occurances and your points were well made.

Yes, that's what inferences are for. Of course, you have your Tarot
Cards so you don't have to infer anything.

Read it carefully, I only covered some subjects superficially.

I may have missed it while quickly scanning
> through it, but it seems you put the weight of the whole monkey,
> enforcement, on the back of the FCC.

Lealnd, the monkey is on the FCC's back, they do the enforcing and
issue the NALs. We can ONLY point out Part 95 and 97, not take any
action. It is sorta like seeing a speeder on the street, you can
report but it will take some kind of enforcement action to get
the perp to slow down.

The problem with your idea is it does
> nothing to address the idea that people think it's OK to freeband, bootleg,
> run amplifiers, etc. on 11m, but just don't let the FCC catch you.

I will try to point this fact out, DIPLOMATICALLY, but without teeth in
the law, most scofflaws just flaunt it. Human Nature being what it is,
we can not provide guidance to fools. The best thing we Amateurs can
provide
is a good example, keep good intel (keep a running list on who has been
naughty
and who has been nice) |-) and just smile. No need to wrestle with the
pigs, you get muddy and pigs love it! No need to piss off the world,
you ain't
going to change their minds, that job belongs to mr. nal 8-{}!

> There are
> far too many CB operators out there that advocate doing just that. So you
> can have all the draconian enforcement you want, BUT until people get it in
> their head that the Part 95 rules should be observed, and are there for
> every ones good nothing will change.

The prime words are DRACONIAN ENFORCEMENT!!!

Without enforcement, all the preaching will not stem the tide because if
someone thinks he can beat the system, he will try. Case in point, My

truck driving Brother-in-law loves his 2950 soupped up rig with ALL THE CHANNELS. I have tried to show him the error of his ways, does he listen, NOOOO. He drives for a national outfit with lot of cargo to haul, so if Mr. FCC was to suddenly start clamping down here is how to drive the message home:

Setup a checkpoint somewhere in the Mid-West or Great Plains. The MR. FCC finds a driver working for a major line with his soupped up 2950 sans an AMATEUR RADIO LICENSE and he immediately telephones the US FEDERAL ATTORNEY for the State of XXXXXXX to cause to be issued a Warrant for the Arrest of the Truck and its Cargo along with all radio equipment located thereon.

The driver has just earned a $10,000.00 NAL to boot. Since the truck is now IN REM SEIZED, I would bet a shiny Silver Dollar that you would have some lawyer types for the trucking company trying like hell to un freeze that asset! After a bond is posted for truck and to cover the Section 301 violation you could bet that SAME SHINY SILVER DOLLAR that the driver would be lucky to be employed. At the same time, the trucking co would probably (via the legal staff) comb their trucks to see if the same conditions exist. A memo from legal after an incendent which is potentially costly will get their attention. A smooth legal trick would be have the US ATTORNEY for the STATE of XXXXXXXXX to enter a deferred consent agreement if this matter does not happen agian with this truck line, its employees or contractors.

Keep up steady pressure, keep up inspections and the FCC would get a handle on this problem in a short time. Remember my poor trucker with $10,000 NAL? Well if he is lucky enough to keep his job, so be it but the FCC upon its conference with him (Believe me, MOMMA and the 4 rug rats at home will help him make up his mind to completely cooperate) could offer him the deal of a lifetime, give us sworn testimony about how you acquired this gear and who modified it and we drop the fine. Believe me, 9 outta 10 will sing like a bird when Momma and the 4 Rug Rats realize they may miss a few meals.

Draconian Enforcement, maybe, just a fine to the Driver and a call to

his
legal staff via the dispatcher would probably get the message through.
Do
it with conviction stay the course and I guarantee some results would be
forth coming.

> I think that is one of the prime
> differences between CB Radio and Ham Radio. As Hams we know the rules, Part

> few remaining legal CBers who have had enough of the illegal CB operator,
> and starts to reform the mentality of the "typical illegal CB operator" to a
> more rule observant one by peer pressure.

Peer pressure!!! It is too late in the game to hope for a conversion,
the
only way I see any change is with the RADIO COPS of the FCC issueing
some
serious NALS and following up on complaints from the legal CB and HAM
Community inorder to make enforcement work.

> When you have magazines like
> "Popular Communications" that featured an article about a CB Radio

> condemnation would seem to signal it's OK to thumb your nose at the FCC and
> Part 95. As far as I can see there was no social responsibility shown by the
> after mention magazine, and particularly the author of the article.

If any half baked joe can fing a keydown, why not the FCC?

This is
> just one example of what, how, and where things must change.

You wil get change when you empty some change outta some pockets and
bring embarressment by public release of info.

While the total
> elimination of any illegal activity can't be done it can be greatly reduced.

EXACTLY.

> That can only happen if the attitude of the people can be changed, and the
> illegals find themselves in a tiny minority.

If the FCC sends a message the rest of the community will take notice
and see

it is a joke.

The resulting tiny minority of
> illegal CB operators would then be a good target for the FCC to focus their
> enforcement efforts on.

Believe me, bust a few bad ACTORS and the rest will get the message. I
would
not want super draconian enforcement but a few weigh stations/truck
stop/
cb shop busts along with catalogueing the Bad Actors which come to the
attention of the FCC would show the rest of the country that it will not
be tolerated.

Because their egos always talk louder than any shred of human decency they might possess, and they think they are going to pull it off and go scott-free.

Either that, or they don't give a damn about you and me, so why should we give a damn about them?

Maybe it has something to do with their warped ego knowing it'll get huge publicity. There should have been no more than 4 McVeigh news reports: The crime, the capture, the conviction, the execution (three if the accused was acquitted). Instead, it has been non-stop media circus showtime - just the thing for getting the next doofus' ego to spin up.

I hope they are planning to spread his ashes on a cow pasture, so he can be shit on for eternity.

Hi Dwight,

I've been working on my Morse code also, and have had some problems along the way, maybe some of my experience can help you. I didn't pass the Morse test a few weekends ago, (guess that makes me an idiot-for all those who find it so easy) At any rate, I came close, but no cigar. In the week afterward, I actually moved *backwards* in ability - I'd freeze on a letter, and then get downright angry. Fact is, I know the code, but my hearing problems aside, there are a few things that need work:

My personality is such that I expect perfection. That can get in the way, so I have to work on that.

I went back to doing test QSO's in my program at a slower rate, to where I didn't screw up. I am going to work my way *well* past 5wpm so I can be assured of success for the next test.

RELAX!!! The difference in my ability to copy CW depending on whether I'm tired, or annoyed, or relaxed is amazing. Last night, after a session in the Jacuzzi, I copied for over 40 minutes with only a couple mistakes. Now if I can just get the VE's to administer the test while I'm in the hot tub...hi hi.

- Mike -

Dwight Stewart wrote:

>
> Of course not. At this point, I'd just be thrilled to pass the 5 wpm test. In fact, based on my experience with the code program I downloaded last week, I doubt I'll ever get up to the speeds you're talking about. Any clues? While I can recognize individual characters when they're repeated alone, once the program starts sending groups of characters I've supposedly learned, all those beeps quickly start sounding the same to me. I don't think I'm any closer to taking that test now than when I started. Aaagggghhhh!

 Ah, but it DOES, as far as the late example is concerned.
 It always amazes me to read of someone who has been convicted of
murder, sentenced to life or some very lengthy sentence who, upon being
paroled in a few short years, murders again. You find that common with
serial murderers. Putting their lights out at least assures *they* won't
do it again. Nothing else seems capable of assuring that.

At least one of my multiple personalities can't copy Morse
code at any speed. :-)

You should go look at my look-up counter on QRZ if you think 104 is a lot.

Only if you catch them. And in the present case we may not have done so.
Capital punishment does nothing to deter the person who is willing to die
for their cause, and I think McViegh falls in to that category. For an
example of that just look at the middle east. There doesn't seem to be any
shortage of suicide bombers there. There seems to be no end to the violence
there even when it involves a self imposed death sentence at the conclusion
of the act.

The worst that could have happen to a person like McViegh would be to live
out his life being butt bugged everyday, among other unpleasantries to be
experienced, then spend the next 10 to 15 years slowly dying from AIDS.

I was close to ACS in the years that I was in California, and worked with both the late founding director (Stan Harter) and the current director (Ben Green) - both active hams - in my role as San Francisco Ringmaster. ACS is preety good, becasue it has good people there.

Make no mistake, ACS coordinates State RACES, the broadcast industry's Emergency Action System (EAS), REACT, other similar non-governmneteal communication groups, and therefore relies strongly on amateur and non-amateur volunteers to function, just as the rest of OES (Office of Emergency Services) relies on the agencies which make up the Public Safety Communications sector. Thankfully we got rid of the buffoon in the latter agency who, when contacting us for something special, would say that he was calling from "The Governor's Office of Emergency Services" (its official title) with emphasis on the first three words and often leaving off the rest of the name....

Cooperation is the name of the game.

>to the "illiterate" civilians.

There is "nonsense" here, but it is not in what I wrote.

And here it is........

>They demanded, not insisted, that
>all who dare enter into sacred HF territory be first code-tested
>and pass a written test to "properly" receive a "valid" license.

>Robeson was not aware of this at the time, being around 4
>years old.

This is true. However it does not negate my current ability to read,
learn and formulate an INFORMED opinion based on historical documents NOW.

If one were to accept your insinuation that we are not able to do this,
for what purpose would we build libraries, databases, etc? Are we to assume
that ONLY first hand recollections are valid for the formulation of an opinion?
I would hesitate to make that suggestion to the members of the Supreme Court
whoi make judgements based on a document that was drafted almost 2 centuries
before they were born.

>There was little outcry by the then-long-tenured about round-
>the-world propagation of this new Citizens Band Radio Service.
>The outcry, indeed hue-and-cry, was about the "despicable"
>government action of taking away a "sacred" band and giving
>it away to "civilians" without any license test at all!

You have quoted the words "despicable" and "sacred", insinuating that
these were words used in archived texts by persons or entities who may have had
occassion to comment on the creation of CB.

Please provide the text from which these words were drawn.

>>>That resentment grew into a general bigotry that still exists today,
>>>three generations later.

>>The results of thier concerns was to become manifest. Unless you >>call what
exists between 26 to 28Mhz "acceptable"...?!?!

>Which of four radio services is Robeson talking about?

Anyone who has any PRACTICAL experience in Amatuer or radio as a hobby knows what I am talking about. Unfortunately this omits you. (Poor attempt at obfuscation....didn't work...never does....)

>How has Robeson's life been disturbed by any of the four
>radio services using that 2 MHz of HF spectrum?

How has the presence of a Morse Code proficiency exam distrubed Anderson's life...?!?!   You are not an Amateur and have repeatedly stated your intent to not be licensed.

     That's what I said...And we have worked hard to correct those
shortcommings.

>Robeson is awash in patriotic double-talk and flag-waving emotion.
```

I earned that right.

>Robeson cannot possibly "KNOW better" anything that happened
>in 1776 or 1791 except through recorded history.

Excuse me...I am sorry...I forgot that only you can possibly know all these things first hand.

> This "American
>history" and "constitutionality" is all misdirection to steer discussion
>into an area that Robeson claims some sort of expertise. He does
>not have American history expertise.

And YOU do...?!?! And by the way, I will again ask you to prove an assertion you have made and please provide a quote where I said that I claim "some sort of expertise"...

You are rapidly regressing to a non-truth-expressing mode, Len. Please don't do it.

>Why then did Robeson seek to remove First Amendment rights
>of another citizen on 25 January 2000 and yet another a day
>ago? Answer that on "constitutional" grounds.

I didn't. You made your comments. I countered them. You are no less able to come and go "Constitutionally speaking" than before either of those occassions.

And I suggest you check those dates. You are getting your own rant wrong, Len.

>Let's clear the air here and rip out the false bunting of "patriot
>games."

Anderson-to-English translation: I can no longer continue to obfuscate on matters on which I have been "called", ergo I will make unfounded allegations and try to redirect the questions.

No problem, Len. I never really expected an answer. Not a direct one, anyway.

>No one, repeat, no one, is attempting to "ban" the
>use of morse code mode in US amateur radio if that mode is
>allocated in the US amateur radio service.

No one, repeat, no one, is attemptoing to "ban" the licensing of retired electronics technicians who don't like Morse Code tests.

>The discussion is about the morse code TEST for an amateur
>radio license (capitalization mine). Removal or retention of
>the code test. Test.

You are the only one arguing this, Len. Everyone else in the world is simply awaiting the deletion of S25.5. You see dark forces ready to covertly overthrow the Govenment at the last minute and not only retain the TEST, but to REinstate the 13 and 20 WPM tests.

Ain't happen'n. The FCC has said so. Almost every major adminisitration in the world has said so. Only YOU aren't listening. (capitalization mine)

>Incorrect. As far as GNP, California-as-a-nation would rank about 17th,
>not in the "top 10."

At one time an article in the Wall Street Journal put it at 6th. I presume that persons who write for the WSJ have a better perspective than EITHER of us, Len. Sixth is better than 10th, I believe.

>"That [large] a tax base" is apportioned to all the citizenry. In order
>to make Robeson's statement true he would have to use a per capita
>value for "toys" [equipment] based on a total state income.

No I don't. It's already a fact. Unless you care to prove that all those "toys" were donated by some benevolant benefactor?

And one cannot prorate this type of expenditure to the census when individual income is not the only funding.

>Good luck on this one now...

Don't need luck, Len...Facts work just fine, thank you. (You should try to use your own "tag" line, Len...this one didn't work for Hans and it's even LESS effective for you....)

W9INN (Bill) has authorized me to publish a web page devoted to his great-performing line of wire antennas. There is contact info, technical data, and illustrations of his most popular antenna the MPD-5C 5-band dipole.

The W9INN Antenna Page is located on the site listed below.

>Good luck on the claim that California "can afford luxury" above
>"poor" states...

Don't need luck, Hans... The original assertion stands. No two states have the same budgetary obligations or objectives. You are comparing apples and oranges.

The ES needs of most eastern and southern cities are NOT the same as Californica...volunteerism is more established in those regions.

Nice try, Len.

The fact of the matter is that California DOES spend more money on this program since it historically NEEDS them. Hedonism and volunteerism are inversely proportionate, and this is never more apparent than Californication.

No Brag...Just Fact.....

>All eleven had one to all of those reasons.

NOW I SEE! Here's the "quotes" Len was refering to...people he had to work with. NOT public comment...NOT official "policy" of the League or any other REPUTABLE or ARCHIVED source...

Obviously we are again subjected to the situation of "The Superior Intelect" (Larry Roll being the other...) having to "tolerate" working with/for persons he deems LESS qualified than he.....So we now see that his hatred of All Things Amatuer are almost as long-tenured as his career as a technician.

Of course in this time frame Len would have been in his late 20's...No doubt still full of "P&V", a bit more confident of his skills than the truth would bear out.

>Good luck on this now...

Still copy-cating a tag line that is as ineffective for you as it was the original author. The old imaginative juices drying up, Len?

Prozac You Anonymous Coward,

>Steve You seem like the Biggest Punk of all and Ill bet if you and him >were face to face you might not say the same things as you do behind >the keyboard. You give Ham radio a bad name not his bio. Get your >head out of your ass because all that shit your talking is stale.

I am sure you think so...and speaking from behind an anonymous screen name, I bet you find THAT a lot easier to say, too!

Please take a few courses in sentence structure, spelling and punctuation before you take another swipe at me, Anonymous Coward. What would your mother think you did with the money she paid for your education?

(Perhaps "Rob St Denis" could provide you a few pointers)

Now, go back to flaming 8 year olds in "Pokemon" chat rooms...perhaps you'll find someone there you can impress, Putz.

>Steve, now you know exactly how I feel about the drug laws and the
>war on drugs.

No, Cecil, I am afraid I don't. I have to deal with the "side effects" of drugs, both "illegal" ones and ill-gotten or abused "legal" ones.

This past week alone I have had to pump the stomach of the same 20 year old twice...We put a pregnant 17 year old who was admitted for cocaine toxicity in the Intensive Care Unit...We had to LifeFlight a 33 year old mother of two to Nashville who was hit by a drunk driver...

And my hospital is far from "The Big City".

Unfortunately drugs from both sides of the DEA roster are things that we humans will never "responsibly" use without some sort of artificial restraints.

I appreciate your opinion, Cecil. I just don't appreciate having to deal with the results.

I think that he is enough of a man not to be bound by stereotypes and the inevitable attitudes of a few regressives. There are no more "woman's jobs" than "men's jobs." For most of us, we are in an age where people are recognized for their abilities.

Hey, Steve -- Way to go, man!

Gee, lookie here, one of the more mentally challenged CBers, from the =
other news group, decided to poked his nose in to the tent again. I =
guess he can't read. Nothing in this thread has anything to do with his =
comment above.

Did you know this guy like likes to fancy himself as a kind of trouble =
shooter, helping other CBers to get their hands on those trouble some =
"export" rigs? Just check this bit of prose out he wrote, particularly =
at the end. That should be enough to explain where his head is at. =
Please note that the E-mail address listed above his quoted comment =
matches that above the referenced article.

http://sporadic1.tripod.com/page7.html

The other thread had a few posts about "problem" CBers, and - well one =
just showed up just to remind us. Thanks Twistedhed. I knew I can count =
on you to provide the required example.

Unless by their death one turns them in to a Martyr. In cases like that, =
a Martyr for the "cause" can be the source of more violence than if the =
person was still alive. That's why some countries aren't so quick to =
execute certain well known prisoners.

Proz, let me tell you how it is here. Name and callsign bring credibility,
neat handles do not. May not be PC, may not be fair, may be pure bullshit,
but it is the reality.

>
>   Len...we have been doing so well this week and now you are starting to
>not tell the truth again.

On public record of the 2600+ Comments on FCC 98-143 dated
25 January 2000 is a one-paragraph "comment" to the FCC
that they should not accept my Reply to Comments dated
13 January. That's control and an attempt to stop a citizen's
First Amendment freedom.

On public record a couple of days ago in this newsgroup is a
copy of Robeson's attempts to control/stifle another radio
amateur's statements at QRZ.COM, namely Bruce Beynon,

WA8ULX.

That's telling the truth and verifiable by anyone.

>   Shall we resume?

That's up to Robeson. I care less except for all those times
when Robeson has been incorrect, not factual, never giving
references to supposed "facts."

>and oranges.

My name is not Hans. Robeson has me confused with another
individual in this newsgroup.

>   The ES needs of most eastern and southern cities are NOT the same as
>Californica...volunteerism is more established in those regions.

It is true that all the United States have differing needs, however the
"volunteerism" being "more established" in eastern and southern
cities is a personal geocentric viewpoint not borne out by published
facts.

The most populous state in the union is spelled California, not
"Californica."

>   The fact of the matter is that California DOES spend more money on this
>program since it historically NEEDS them.

Hurricanes are rare in California or even over the whole of the west
coast...yet they are an annual event on the east coast and on the
Gulf coast (see TX and LA of recent days)..

>Hedonism and volunteerism are
>inversely proportionate, and this is never more apparent than
>Californication.
>
>   No Brag...Just Fact.....

No fact, just another geocentric pejorative, an insult hurled by
those against states not their own, regions not their own, for
varying personal reasons. Not at all factual.

>   This is true. However it does not negate my current ability to read,
>learn and formulate an INFORMED opinion based on historical documents NOW.

Heh heh heh..."historical documents" written by now-long-timers
witnessing some very angry then-long-timers?

Robeson needs to cite the source of his "historical documents."
Now.

>   If one were to accept your insinuation that we are not able to do this,
>for what purpose would we build libraries, databases, etc?

I make no "insinuations," merely indicate observations of the
late 1950s during and after the creation of Class C and D CB
radio service.

>Are we to assume
>that ONLY first hand recollections are valid for the formulation of an
>opinion?

No, not "only." However, Robeson hastily jumps high conclusions
(at a single bound) by trying to deny the observations of those who
were there and silently witnessing the anger and resentment of so
many then-long-timers.

In another posting, Robeson insisted on his recollection of some
Wall Street Journal ranking of states as being "correct." Robeson
did not cite the issue date of such WSJ document, merely
"recollecting" it.

Libraries are vast collections of data of history and, not surprisingly,
have many, many "recollections" of the times and activities of its
authors. One could use Robeson's "debate technique" and ask if
Robeson wished such "first-hand recollections" be removed becasue
of lack of factual data?   :-)

> I would hesitate to make that suggestion to the members of the Supreme Court
>whoi make judgements based on a document that was drafted almost 2 centuries
>before they were born.

When Robeson argues any case before the Supreme Court of the

United States, I will celebrate by buying Phil Kane and his wife a
dinner of their choosing at any location of their choice within the
lower 48 states of the USA.   :-)

>   You have quoted the words "despicable" and "sacred", insinuating that

>>>what exists between 26 to 28Mhz "acceptable"...?!?!
>
>>Which of four radio services is Robeson talking about?
>
>   Anyone who has any PRACTICAL experience in Amatuer or radio as a hobby
>knows what I am talking about.

Anyone who has any practical experience in communications on
HF (which includes me) will know that the 2 MHz wide region
between 26 and 28 MHz has Region 2 allocations of: Broadcasting,
Maritime Mobile, Fixed and Mobile, Meteorological Aids. That same
2 MHz region is allocated in the USA for: Radio broadcast,
auxilliary broadcast, Maritime Mobile, Maritime Fixed, Land Mobile,
Private Land Mobile, and Personal.

>>How has Robeson's life been disturbed by any of the four
>>radio services using that 2 MHz of HF spectrum?
>
>   How has the presence of a Morse Code proficiency exam distrubed
>Anderson's life...?!?!

Robeson did not answer my question. As to Robeson's question,
I am not "distrubed" in the least. :-)

>You are not an Amateur and have repeatedly stated your intent
>to not be licensed.

Incorrect. Wrong. Error!

I have never stated any "intent to not be licensed."   :-)

>Conclusion: Without S25.5, FCC would have no reason to keep code test.

The Axiom is incomplete. :-)

It ignores many comments during and after the 98-143 NPRM Comment period, the recent policy statement by the ARRL BoD in regards to "keeping the code test [for a US administered exam]" and many other statements by the PCTA. It's rather obvious to everyone that many, many radio amateurs want to keep the code test.

>Do you think the FCC would keep the code test without S25.5, Len?

I really don't know. I cannot discount the superior amateur extras
who insist that morse code is such an essential, versatile, mode
[see K3LT for a full list of appropriate adjectives]. The FCC will
listen to all citizens. If enough citizens say that the code test must
be kept, then they might consider it necessary to retain it. Or not.

I cannot predict the future with certainty. My balls are not made
of crystal.

>My good
>friend K2UNK has assured me that the FCC will be petitioned to remove all

Bill is a "good friend?" :-)

>... How could FCC deny such a petition
>and still be consistent with their past 10 years of statements re code

>>
>So? They don't have to explicitly predict their actions. The FCC's intended
>path is clear to anyone who looks at the information in a reasonable manner.

Noooo. The probability of future action is high that the code test
will be removed if S25.5 is changed. Probability.

There is no such thing as a "clear path" to the future. In anything.

>>>>The code test still exists for General and Amateur Extra class
>>>>licenses.
>>>
>>>That test has been reduced to the very minimum that reasonably meets the

>>
>>Incorrect.
>
>No, it's perfectly correct.

Terribly, badly, not-good incorrect. S25.5 does not specify any
code rate. There can be no "very minimum" when there is no
quantified code rate given.

>> Article S25.5 does not, repeat not, state any code
>>rate. There is no, repeat no, "minimum" nor any "maximum"
>>code rate specified in S25.5.

>
>For manual Morse use, 5 wpm is very slow, by any reasonable standard. It has
>long been the absolute minimum standard test used by any country. The
>consensus
>of those who are knowledgeable about the subject is that 5 wpm is the very
>minimum that reasonably meets the requirements of S25.5. Note the word
>"reasonably".

S25.5 does not specify any code rate. Ergo, there can be no
quantifiable "minimum" or "maximum." The code rate is all
left up to individual adminstrations.

>Do you want a slower test, Len?

No, I want S25.5 to be changed to simply state that no
administration need require any code test to obtain any
amateur radio license...perhaps adding the definition that,
for OOK CW communications, the morse code is defined
as International Morse Code.

>>Rhetorical hypothesis. There is NO such prohibition.   :-)
>
>But it is not supported by a reasonable analysis of the facts.

Hypotheses are simply hypotheses. A hypothesis may be
based on facts but facts can seldom "prove" any hypothesis.

Negatives cannot be "proved." Negatives are non-existant.

There is nothing right now in all 11 articles of S25 that prohibit
any nation's administration from requiring a code test. S25.5
is so worded that it's second sentence reads: "The
administrations concerned my, however, waive the requirement
in the case of stations making use exclusively of frequencies
above 30 MHz."

The first sentence of S25.5 requires the code test. The second
sentence allows a waiver of that code test. There is nothing in
all 11 articles of S25 that prohibits any administration from
requiring a code test for any amateur radio license.

>>United States? Far, far from it.
>
>   That's what I said...And we have worked hard to correct those
>shortcommings.

Robeson originally said that the founding of the USA was "perfect" for "every" person. When countered with that he attempted to prove (unsuccessfully) that he wrote something else.

>>Robeson is awash in patriotic double-talk and flag-waving emotion.
>
>   I earned that right.

By what? The grant of an Amateur Extra license class?!?   :-)

[all will now be treated to the semper fry of the usmc faithful]

>>Robeson cannot possibly "KNOW better" anything that happened
>>in 1776 or 1791 except through recorded history.
>
>   Excuse me...I am sorry...I forgot that only you can possibly know all
>these things first hand.

I cannot possibly know what happened first-hand 225 or 210 years ago.

Neither can Robeson...yet he writes as if he were there.   :-)

By the way, what is the significance of the year 1791?
Does Robeson understand its importance?

>>Why then did Robeson seek to remove First Amendment rights

>>of another citizen on 25 January 2000 and yet another a day
>>ago? Answer that on "constitutional" grounds.

>occassions.
>
>   And I suggest you check those dates.

Quite right on checking those dates. Make it 25 January 1999 for
Robeson's single-paragraph "reply" to a "reply to comment" of
mine. Robeson's "comment" does not address one single point of
the 14 text pages of my Reply to Comments. Not one. Robeson's
only remark was that the FCC should not listen to me. Period.

Fortunately, the FCC listens to all citizens.

>>No one, repeat, no one, is attempting to "ban" the
>>use of morse code mode in US amateur radio if that mode is
>>allocated in the US amateur radio service.
>
>   No one, repeat, no one, is attemptoing to "ban" the licensing of retired
>electronics technicians who don't like Morse Code tests.

Now, now, Robeson is lapsing into name-calling. I am a retired
electronics engineer who does not dislike morse code tests but
does not consider the morse code test to be valid for an
amateur radio license examination.

Robeson did attempt to ban my Reply to Comments on 98-143
and the attempt is public record. It is amazing that he continues
to defend such things and, on top of it, deny that he did anything
wrong or unethical. Amazing.

>   You are the only one arguing this, Len. Everyone else in the world is
>simply awaiting the deletion of S25.5.

Robeson should read the commentary in this newsgroup more
carefully.

Robeson is in error in saying "everyone else in the world is simply
awaiting the deletion of S25.5." Robeson has to somehow prove
the "everyone else" group, yet he has not and cannot. He will
attempt to rationalize that it is so because he will not retract
anything he has said in the past, however erroneous.

>You see dark forces ready to covertly
>overthrow the Govenment at the last minute and not only retain the TEST, but
>to REinstate the 13 and 20 WPM tests.

I see no such thing. In this post I see only Robeson making strange,
erroneous comments.

>   Ain't happen'n. The FCC has said so. Almost every major
>adminisitration in the world has said so.

Please list ten of the "major administrations" in the world who "are awaiting the deletion of S25.5." Or list five. Or three or two.

Is the administration of the United States "waiting the deletion of S25.5?" The Advisory Group at the FCC IB has not yet gotten any position on any of the 11 articles in S25, let alone S25.5. [that information is all public and available to anyone...Robeson seems to ignore such matters]

Only one official at NIST has made any mention of S25.5 and that in a Draft Paper to be later submitted to the entire USA WRC administrative team.

Robeson seems to know nothing of all that despite all the information being public-access. What Robeson does is issue erroneous one-liners such as:

>Only YOU aren't listening. (capitalization mine)

It is getting increasingly difficult to discuss, debate, or argue anything with Robeson in this newsgroup. All Robeson wants to do is fight petty little word games, deny things he wrote in public, refuse to reference factual data, and accuse others who do give references as "liars" or "putzes" (to use an unbecoming Yiddish pejorative that seems a favorite of Robeson's).

For terrestrial DX, senior.   :-)

No slam against Ed Hare, but I find JPL's DX record a tad more
impressive.

Go for the Goldstone. :-)

My name is not Hans.  Robeson has me confused with another
individual in this newsgroup.

>    The ES needs of most eastern and southern cities are NOT the same as
>Californica...volunteerism is more established in those regions.

It is true that all the United States have differing needs, however the
"volunteerism" being "more established" in eastern and southern
cities is a personal geocentric viewpoint not borne out by published
facts.

The most populous state in the union is spelled California, not
"Californica."

>    The fact of the matter is that California DOES spend more money on this
>program since it historically NEEDS them.

Hurricanes are rare in California or even over the whole of the west
coast...yet they are an annual event on the east coast and on the
Gulf coast (see TX and LA of recent days)..

>Hedonism and volunteerism are
>inversely proportionate, and this is never more apparent than
>Californication.
>
>     No Brag...Just Fact.....

No fact, just another geocentric pejorative, an insult hurled by
those against states not their own, regions not their own, for
varying personal reasons.  Not at all factual.
```

>>Incorrect. As far as GNP, California-as-a-nation would rank about 17th,
>>not in the "top 10."
>
>   At one time an article in the Wall Street Journal put it at 6th. I
>presume that persons who write for the WSJ have a better perspective than
>EITHER of us, Len. Sixth is better than 10th, I believe.

"At one time" is not a specific reference nor can I believe that
Robeson regularly, or even irregularly, reads the WSJ.   :-)

A "Gross State Product" or GSP is calculated the same as a
Gross National Product or GNP. It is an accepted indicator of the
productivity and money flow in a region. As given in the 2001
edition of The World Almanac (a newsstand annual publication)
the 1998 GSP of the state of California was $1.1 trillion. That can
be compared to the GNP of nations in the same publication.

The equivalence of "17th or 16th GNP as a 'nation'" for California
has been widely quoted in the news by CBS, NBC, ABC, CNN,
CNBC, PBS TV networks and in the New York Times, USA Today,
and Los Angeles Times newspapers throughout 2000 and 2001.
[there is a slight variation of 17th versus 16th which may be due
to varying GNP years used by those news organizations...GDP
is now the commonly-accepted comparison of a nation's
productivity]]

California has the greatest population of any state in the union at 33,145,121 (1999, from The World Almanac 2001 edition). California ranks third in the land area of all 50 states (Alaska the largest, Texas second).

The same World Almanac uses "GDP" or Gross Domestic Product as an indicator, taking into account the changing dollar value on the world market but giving GDP values in US dollars. This would favor the ranking of California-as-a-nation but the 1998 GDP values in The World Almanac all rate China, Germany, India, Italy, Japan, and the United Kingdom as having GDPs larger than $1.1 trillion. The USSR would be in there except that the breakup of the USSR has the several republics listed individually...their combined GDP would be in the list for a total of seven.

>>"That [large] a tax base" is apportioned to all the citizenry. In order
>>to make Robeson's statement true he would have to use a per capita
>>value for "toys" [equipment] based on a total state income.
>
>   No I don't. It's already a fact. Unless you care to prove that all
>those "toys" were donated by some benevolant benefactor?

Robeson's "fact" is erroneous. Since there were already (1998) six nations with a GDP higher than $1.1 trillion, California cannot be "sixth." If the GSP were calculated the same way as GDP-for-a-state, California might rank lower. Robeson's recollection of the "WSJ ranking" may be in error.

>   And one cannot prorate this type of expenditure to the census when
>individual income is not the only funding.

Individual and corporate incomes and all the other money flow is used by all states and nations to calculate their taxation and thus income to governments. Those very same figures are used by commerce to indicate market areas with profit potential.

Taxation income is from both individuals and corporations. A state with a large tax income can have a large emergency communications infrastructure. However, that same infrastructure has to extend to all state citizens over the whole of the state. California ranks third in geographic size among the states and is long north to south. It is a ten-hour drive (no stops) on Interstate 5 to go from Yreka near the northern border to Los Angeles, at least another hour and a half to reach San Diego near the southern border. Such a long length requires more communications lengths as compared with Rhode Island, yet Rhode Island has a GSP/capita close to California.

Hello Leland,

>A good many of those so called "Freebanders"
>and others using amplifiers etc. do so for the "thrill" of getting away with
>it.

Tell you what, why don't you visit www.sugardelta.com or www.alfatango.org? Really look around and peruse. I don't think you'll find much (read ANY) indication of 11 meter operators seeking the "thrill of illegality." I personally know a good many operators from division "2" (Hey, that's the USA!) and none exhibit this trait.

>They have zero interest in getting in to AR because the "thrill" of law
>breaking would be gone. How else would you explain why the technically more
>astute among them refuse to get a ticket regardless of the volume of offers
>of help, and even equipment at times?

Many are already licensed amateur operator and yes, "I have seen it myself" as well.

>I have seen it myself, it's the thrill
>of being a pirate operator, sort of like the modern day antihero. For these
>people getting a ticket so they can shoot skip, run high power, legally,
>would take all of the fun out of it.

No comment, although I find "expert testimony" re. the wolves' behavioral motivations without having actually having spent some time operating from "within the den," highly suspect at best. Leland, you've never actually operated on the 11 meter freeband, have you? You're not going to tell us that "some of my best friends are...," are you? If so, wouldn't you be duty bound to report them to the FCC? Geez, alot said for "no comment."

>The only thing you can do for these
>people is pull the plug on them.

Umm humm.

>Then on the slight chance they do get
>licensed

Your about half-a-step behind, with a step equaling approximately ten years.

>do we really need to add to the problems on lets say 75m, where
>high power and language seem to be a bit out of control?

Now there's a garden that needs weeding. The 11 meter garden is "not an amateur radio concern." (A direct quote from The ARRL, your...er, OUR league.) Take care and 73.

Mark

As a second priority, sure. The first priority is keeping, preserving
and enhancing ARRL.

Hi all,

Just a quick update. I received both the Signature Jr. and the Concept 2000 (pretty interesting name for a product of the 60s/70s) "Base Units." What pushed me to write this update was the Concept 2000's "Operating Maual." It contains not only a nice schematic, but a "decoding" chart for Morse code...sort of like a tree chart. Then yesterday, I received this month's issue of 73 Amateur Radio and it featured pretty much the same outline. Cool!

Another nice thing is the quality of things manufactured twenty plus years ago. Even though they were ostensibly "toyish" items, their build quality along with the inclusion of a nice schematic is a pleasant reminder of past craftsmanship. It's nice to open a box and find an older item in "mint" condition, for all practical purposes, brand new. The Signature Jr. will find a permanent position on my "active" desk with the telescoping antenna replaced by a "hard wired" length of coax connecting it to the antenna switch. A mini-phono jack will also be added so I can use the Vibroplex straight key instead of the integral unit. Thanks again to all.

73 de Bert
KC2HMN

P.S. They are both 200mW. Anybody want to support the newly formed 11 Meter CW/QRP Club?:-D

It's all kind of like the "Which Came First, the Chicken or the Egg" debate.
Can't have one without the other.

What you are dealing with is human stupidity, not drugs, Steve.
Do you also advocate outlawing ice cream because some stupid
people eat too much of it? You also deal with the results of
tobacco. Do you advocate outlawing tobacco? When are we going
to stop blaming inanimate things for human actions?
--
cheers, Cecil

>S25.5 is eliminated. If that is done, what is there to prohibit the
>US administration (the FCC for amateur radio) from requiring
>code testing?

There will most definitly be a filling of an RM if the FCC
doesn't come out with an NPRM on its own. The reality
is that the FCC did not endorse any rational to retain
code testing offered by anyone with the single exception
being the need to maintain treaty compliance because
of S25.5.

Is there anything to prohibit continued CW testing by
the US as a requirement after S25.5 is ended? Short
answer is no. Rational answer is that continued incorporation
of CW testing foor US hams after S25.5 ends is very
unlikly (IMHO).

Cheers,
Bill K2UNK

Guess what Stevie, my Bios is still there, I bet that just burns you BIG TIME. And guess what else Stevie, my lookup count is getting higher,and Thanks to you I have had a Bunch of Hams E-Mail me, to tell me that they think it is great, and you know what is sad Stevie, alot of them were No-Coders, other wise know as CBplussers, oh and I wont repeat the comments they had about you.
So again Stevie thanks again for the Advertisment. And just for your benefit I will repost it here, 15 CBplussers begged me to.:

" One of the only Real Hams left, most of the new ones are CBplussers"

Isnt Freedom of Speech wonderful?

Who gives a hoot? The decision to end or retain a
code test after deletion of S25.5 won't be governed
by a popular vote of licensed hams anymore than was
the case for going to only a 5 wpm test last year.
The FCC asked for and didn't get a single reason worth
noting in the R&O that by any stretch would hint that
the FCC would/could justify any code test without the
S25.5 treaty requirement.

>>Do you think the FCC would keep the code test without S25.5, Len?

None of us can, but I have a reasonable confidence
level that I'd happily wager a lobster dinner with those

that believe otherwise.

>>My good
>>friend K2UNK has assured me that the FCC will be petitioned to remove all
>
>Bill is a "good friend?" :-)

While N2EY has always been an ardent debater, he has never
said anything that would lead me to think otherwise. We've
never actually met, but I can and do respect his opinion
and his right to have his opinion. Beyond that I hope (as
his comment suggest) that we are, indeed, amateur radio
operator friends.

>>... How could FCC deny such a petition

5 wpm is defined as being an FCC opinion as to minimum

compliance (IMHO). Would 4, 3, 2 or 1 wpm be
acceptable? I don't know since it has never been
proposed or recommended so we have no direct FCC
thoughts on it.

>>> Article S25.5 does not, repeat not, state any code

The probability is that S25.5 will be deleted, not changed.
As Len noted, even without S25.5 an administration is
still free to require code testing if that country wants to.

>>>Rhetorical hypothesis. There is NO such prohibition.   :-)

Just what is not right about CB (assuming the CBer and
CB operation is according to regulations?

CB has many good uses for those not technically
inclined enough to desire a ham license.  My car club
uses CBs when we convoy to shows.  Makes for
a much more enjoyable trip.

>
> My personality is such that I expect perfection. That can get in the way, so I have to work on that.

I think that is close to my problem. When I miss a character, I have to look at it again to figure out what was wrong. Of course, the darn program is still going like crazy, which means that I missed one or two addition characters while looking at the one I missed. At that point, things start to fall apart quickly. But, hey, I'm getting it. Some of the suggestions have worked, and I'm learning to avoid looking back at anything I miss (and that alone takes practice).

> I went back to doing test QSO's in my program at a slower rate, to where I didn't screw up. I am going to work my way *well* past 5wpm so I can be assured of success for the next test.

My program defaulted at 13 wpm code with 5 wpm spacing, which the author insists is the best way to learn code. I wonder what they do for the tests? I'm going to look that up on the internet tonight, because when I tried slowing the program down the other day (5 wpm with 5wpm spacing), I was totally confused (nothing sounded the same). I probably should set the program to whatever is used for the exams.

> RELAX!!! The difference in my ability to copy CW depending on whether I'm tired, or annoyed, or relaxed is amazing. Last night, after a session in the Jacuzzi, I copied for over 40 minutes with only a couple mistakes. Now if I can just get the VE's to administer the test while I'm in the hot tub...hi hi.

That is exactly what I thought while reading the first part of that paragraph - I wonder what the VE's would say if I brought a hot tub to the exam session (along with a little wine and my wife to give me a back massage). Hey, this could change the whole concept of license exams (and the image of ham radio as well). I like it. :-)

I don't "throw" anthing around, Bruce. YOU are offensive and sling your putrid effluent from a keyboard, but at least you have enough integrity to put your name to it.

THAT Anonymous Coward doesn't...(s)he makes allegations of "hiding" behind a keyboard, yet can't even tell us who (s)he is.

That IS a coward.

As it happens, on the weekend I watched a program on the ABC
(Australian Broadcasting Commission, that is) which discussed the
post-WWII boom in the US. It was highlighting the aerospace industry
explosion. The program stated that, at that time, California had the
sixth largest economy in world.

Mark.

>Heh heh heh..."historical documents" written by now-long-timers
>witnessing some very angry then-long-timers?

FCC records..."S9 Magazine", "CB Magazine", "CQ", "QST"

>Robeson needs to cite the source of his "historical documents."
>Now.

Done. I see you still have yet to do so.

I expected as much.

>I make no "insinuations," merely indicate observations of the
>late 1950s during and after the creation of Class C and D CB
>radio service.

Uh huh...That which a court of law would dismiss as "heresay".

I'm impressed.

>No, not "only." However, Robeson hastily jumps high conclusions
>(at a single bound) by trying to deny the observations of those who
>were there and silently witnessing the anger and resentment of so
>many then-long-timers.

Not "jumping" at anything, Len. Anxious for YOU to validate you assertions.

You ahve not done that yet.

>In another posting, Robeson insisted on his recollection of some
>Wall Street Journal ranking of states as being "correct." Robeson
>did not cite the issue date of such WSJ document, merely
>"recollecting" it.

Far more easy for someone to search the archives of a specific, well known and respected journal than YOUR "recollections".

>One could use Robeson's "debate technique" and ask if
>Robeson wished such "first-hand recollections" be removed becasue
>of lack of factual data?

So far, Len, all you have done is offer your opinions as alleged fact. You assert that Amateurs "demanded" the blocking of the creationof the CB band from thier "sacred" spectrum.

And all you have done to "validate" your "quotes" is cite having worked with some Hams who allegedly made these comments.

No names...no callsigns...just "I knew 11 Hams once...."

>>You have quoted the words "despicable" and "sacred", insinuating that these were words used in archived texts by persons or entities who may have had occassion to comment on the creation of CB.

>You betcha I did! Those very words were absolutely used, along
>with a great deal of swear words, all by then-long-tenured hams.

I am sure that those Hams did, at one time or another, "use" those words. I am just as sure that it was not in reference to CB radio.

>>Please provide the text from which these words were drawn.

>Hah! Most publications of 43 years ago would not publish such
>words.

If they were used within the body of official comments to the FCC they would. I can't find anything like it.

So what's up with that, Len...?!?!

Very convienient for your "debate", isn't it, that you can use some asinine claim that "Most of publications of 43 years ago would not publish such words"....

Sounds like your oft claimed "obfuscation" to me, Len.

>Anyone who has any practical experience in communications on
>HF (which includes me) will know that the 2 MHz wide region
>between 26 and 28 MHz has Region 2 allocations of: ...(SNIP)

Yes, Len, those "allocations" are on paper. How many of them are ACTIVE and productive for the assignee of the allocation...?!?!

I know for a FACT that most military applications in the 27mHz range (specifically MARS spots at 27.950 and 27.975mHz) are abandoned.

I am not aware of any current users of the band other than a few obscure hanger-on remote broadcast users at 25 and 26mHz and CAP, which likewise makes scarce use of it's allocations at 26.617 and 26.620mHz.

YOU, of course, can cite some wholesale productive use of the other allocations here, Len?

(Kinda like you can cite your quotes as mentioned previously...?!?!)

>Robeson did not answer my question.

That's OK, Len...you haven't answered ANY of mine in 3 1/2 years.

>As to Robeson's question, I am not "distrubed" in the least.

Denial.

>I have never stated any "intent to not be licensed."

Allow me to answer this with your own words:

>Incorrect. Wrong. Error!

You are failing to utter truthful statements again, Leonard.

Didn't I just do it? Wouldn't "sleazy" qualify as "a bad word directed at them for their coverage of pirate "broadcast" radio?"

> (snip) The lids are abhored, however, nobody
> likes to hear people continously badmouth 11
> meter ops, especially with broad general (not
> to mention dim-witted) comments. (snip)

I must have missed something. I haven't seen many Hams badmouthing CB'ers in general. Instead, what I've seen are Hams talking about the unseemly "freebanders," the illegal equipment, the obnoxious behavior, the troublemakers, the foul-mouthed kids (of all ages), and so forth. And I certainly see nothing wrong with talking about the truth. Of course, since those things are so much a part of CB today, it may seem like they are talking about CB in general when discussing those things.

> > And, of those very few new hams who did

I saw nothing in your message that would challenge that statement. And I'm certainly not going to run around www.eham.net looking for something you say will support your view.

Thanks Ed and Bert. The Spineless Cajun Wannabe and his Anonymous Coward accomplice are invited to join me for a "tour of duty" one night.

For the ignorant and cowardly, nursing was originally a "man's" job. It was only through the tragedy of war that women were, in most "western" countries, called upon to do this task to allow men to fight.

Many women, including the likes of Florence Nightengail and Clara Barton had to overcome the stereotype of trying to "be men" and not go home and raise thier families instead.   Clara Barton championed what we now call "battlefield medicine".

I, for one, am greatful she chose to do so.

Senior, the above is incorrect. I have mentioned the California ACS over two years ago in this newsgroup and been rebuffed by the amateur-only RACES boosters (the ACS includes RACES within its organizational envelope but does not depend on them as sole radio facilities).

Carroll is perhaps confused with my mention of the Northridge Earthquake of 1994 with the loss of all electrical power to ten million in the Los Angeles area. The local (Greater-L.A.) emergency organization already existed then, had drilled for such things and worked very well. Whether or not the Calif. ACS went operational is not relative to this discussion since the suddenness of events of that earthquake and immediate cessation of all primary power required the local infrastructure to respond immediately. They did. The many incorporated cities in this area cooperated, had cooperated on emergency planning and training. Fire engines rolled out at the first shaking (standard procedure here), police departments were on alert, hospitals had their own emergency power generators.

Carroll's musings in front of a computer, however incorrect his recollections, is not the same thing as being confronted with the suddenness of a disaster event. With no warning

whatsoever a Richter 6 scale earthquake struck after 4:30
AM followed by the entire electrical power cut-off for the
area. Darkness everywhere plus following aftershocks.
Was there time to mobilize a statewide network immediately?
Not really. There was no need when a local network was
already in place, functioning, trained, and also tied into the
ACS. The local net worked. The key is preparation,
equipment, and training.

Some folks just read about emergency situations, imagine
they can handle everything, with or without CW. :-)

>>The Axiom is incomplete. :-)
>
>How so? The FCC has said that S25.5 is the ONLY reason for continued code
>testing in the USA.

Really? Please point out the "ONLY" (with or without caps) in
either 90-53 or 99-412. :-)

>The axiom is about the FCC's opinion, not the opinions of others. FCC
>specifically rejected all other reasons and opinions for code testing in

>their Report and Order on 98-143. The only reason they found compelling was
>S25.5.

The Report and Order on amateur radio restructuring was 99-412.

I think you have inferred too much on "specifically rejected all other reasons and opinions." The FCC expressed their viewpoint that code testing is not necessary for their purposes in amateur radio licensing. The FCC stated that the code test must be kept because of S25.5 but I have yet to see where that was the "only" reason.

>Try reading FCC's words on the subject since 1990 or so.

I have copies of FCC 90-53 and 99-412. Suppose you point out exactly the "compelling reasons" or whatever necessary to "prove your point." Use whatever pointers needed to paragraph number or other identification. That's for the edification of others...I have been "reading FCC words" since 1956 on a number of different radio services, amateur radio included.

>FCC has rejected other petitions to change ARS rules that were widely
>supported, simply because they did not see that the petitions served a
>regulatory purpose.

There's a greater probability that such things as the "WAD" campaign were done too late. That's something that Mssrs Wormser, Adsit, and Dinelli might correct in the future.

>Neither can I. The discussion was about whether retaining code testing
>without
>S25.5 would be consistent with previous FCC comments on the subject. I have
>proved beyond a reasonable doubt that it would be very inconsistent for the
>FCC to do so.

Nah. Mostly you've gone into fly-speck twiddling over minutae on words and phrases. :-)

>> The probability of future action is high that the code test
>>will be removed if S25.5 is changed. Probability.
>>
>When you argue minor semantics like that, Len, it's obvious that you know I'm
>roght but won't admit it.

Don't fall off your own pedestal there. :-)

Since Miccolis is an ardent PCTA, I am sure he will try to discredit any NCTA opinion by whatever means. The fly-speck phrase and sentence arguments are an indicator of that.

>>There is no such thing as a "clear path" to the future. In anything.
>
>Sure there is. That's what engineering is all about.

"Engineering" is not the subject here. Those who have been IN
the practice of engineering will know that the unexpected can
happen any time. The same is true for law and regulations.

>Sure there can. The very minimum is derived from the standards of those
>knowledgeable about the subject. Those knowledgeable about the subject agree
>that 5 wpm is the very minimum that meets the letter and spirit of S25.5.

Oh, there is a "letter and spirit" to S25.5?   :-)

Mr. Fly-speck should reread S25.5 again. It does not specify any
code rate. None. Nada. Nyet.

S25.6 states "Administrations shall take such measures as they
judge necessary to verify the operational and technical qualifications
of any person wishing to operate the apparatus of an amateur
station." S25.6 demonstrates some "letter and spirit" insofar as
requiring some kind of license test by all adminstrations but it does
not specify details. In the same way, S25.5 states only that a code
test shall be given ("letter and spirit") but does not state details on
code rate.

Admit it: S25.5 does not specify any morse code test rate.

>Then why all of the blather about 5 wpm?

Miccolis is the one blathering about 5 WPM. :-)

I'm just trying to get Miccolis to admit that S25.5 does not
specify any morse code test rate.

Odds are in favor of Miccolis not admitting it and/or trying to
hide it under another deluge of "neverending story" material.
:-)

We really aren't sure of that. WRC-03 is only about
two years away and FCC 98-143 NPRM started about
three years ago. Internet access has been growing all
the while. Recall the "WAD" petition and the many
form letters that showed up in the 2600+ Comments on
98-143.

It would seem logical that NCTAs should be alert and
ready for any PCTA form letter campaign, then be able
to counter it. The FCC hasn't yet shown that it is blind
to a mass opinion input.

>The FCC asked for and didn't get a single reason worth
>noting in the R&O that by any stretch would hint that
>the FCC would/could justify any code test without the
>S25.5 treaty requirement.

?   Most of the PCTA Comments seemed to be of the

"personal" variety on the code, namely that "they had to
take the test (usually a long time ago) and that all
newcomers should also have to take the test." It is
practically axiomatic that PCTAs regard morse code as
part and parcel of US amateur radio and that it must be
retained at all costs.

>>>Do you think the FCC would keep the code test without S25.5, Len?

>
>Now I'm sure you are just having some fun with this.

No, I am being a bit sarcastic. But...popular opinion is still of
the citizenry, whatever it is. The FCC is not blind to it.

Look at the pessimistic (from NCTA point of view) side:
With privatization of license testing, the FCC does not have
to hold code examinations. VECs do that for amateurs,
COLEMs for commercial licensees. The FCC can simply
keep the current Element 1 without doing anything to revise
the existing regulations in that regard. In recordskeeping on
VE test results, a code/no-code datum is only one field to
enter for a clerk, taking a few seconds to do. All the testing
itself is done by outside-the-FCC organizations.

>>I cannot predict the future with certainty. My balls are not made

Make it roast beef for me, but it's too early to tell yet. Wait
until the FCC IB WRC group gets another draft going on
establishing a position in regards to all of S25.

Sorry about that, Bill, but I was having fun with that one.

I know too many show business types...the ones who use
"close personal friend" phrases to refer to casual
acquaintences. :-)

>>>>>>The code test still exists for General and Amateur Extra class

>thoughts on it.

A quantified rate is always a spark for a lot of comment. My
remark was that S25.5 does not specify any code rate. S25.5
does not specify any code rate. Period. To say a "minimum"
rate is specified in an S25 article is simply incorrect.

>>There is nothing right now in all 11 articles of S25 that prohibit
>>any nation's administration from requiring a code test. S25.5
>>is so worded that it's second sentence reads: "The
>>administrations concerned my, however, waive the requirement
>>in the case of stations making use exclusively of frequencies
>>above 30 MHz."
>
>Which is exactly what the USA does now.

Of course. :-)

But having an international waiver is no guarantee that administrations
will use it. FCC 90-53 could have kept the code test eleven years ago.
The FCC did not keep it, but for different reasons. Licenses are issued
by the FCC for the purposes of regulating radio. The FCC stated in
90-53 that the morse code test did not demonstrate anything to them
for the purposes of licensing.

There is a sizeable number of amateurs who think that morse code skill is an integral part of amateur radio and of a "necessity" in any license issuance. The form-letter "WAD" campaign is a sign of that and also a warning for NCTAs. NCTAs cannot be complacent in thinking that a code test removal is a "sure thing" in the future.

The Cbers on the other news group are always sniffing around looking for dirt on anybody whose opinion they don't like. Since I use my real name and callsign they start with that. The first thing they try is to poke fun at me about the old Morse Code thing. Once they get convinced I could care less about operating on H.F. currently, no room for H.F. antennas in my apartment mainly, they get the message. You can't attack somebody over an issue when there is a perfectly rational explanation why I don't feel the need to up grade at this time, and not because I can't. The huge number of look ups really says volumes about how many people lurk in a news group, but never post anything.

You want another good one to look up then check out N8WWM, which is of
course another Ham with the name Doug Adair, on QRZ too. 8->> You will also
find Richard McCollum makes an appearance the CB news group from time to
time too, but he doesn't list his call sign so it's just a wee bit harder

for the CBers to look him up.

The apartment doesn't have to stop you from using and enjoying HF. When I was apartment bound, I had all sorts of wires in the trees, in the eaves and just about any other which way I could imagine.

You are also interested in digital radio, so you could do quite a bit with very little on HF with those modes. Maybe you could even design a high-speed digital link to a remote HF base in your care. :-)

>The principle is that a person's body belongs to that person, not to
>you or the government.

And I agree with that too, Cecil...it's when you cause something to ALTER that body in such a way that it negatiely impacts society or the enviroment that it becomes problematic.

Perhaps YOU can sit in the privacy of your own home and responsibly enjoy a joint or whatever other recreational pharmaceutical you care to consume...however YOU would be only a tiny, tiny fraction of that group.

Unfortunately, YOU are having to suffer the tribulations of "drug laws" based upon the actions of the majority of the REST of society.

>Lots of things that are rights are against the law. Blacks using white
>restrooms in Texas in the 50s, for instance.

The use of a restroom is not about to cause a motor vehicleto cross the centerline and kill some innocent citizen.

>We should wake up and
>treat drug problems as social problems, not as crimes.

Any person who causes a death while comsuming thier favorite recreational drug should be either hung with a hemp rope or a lethal dose of whatever the drug of choice was.

Drug dealers should be publically executed.

>Simply smoking marijuana in the privacy of one's home is no
>worse than consuming alcohol in the privacy of one's home...(SNIP)

IF and ONLY IF that parameter is met, you are correct. However just like alcohol, most people under the influence usually think THEY are the ONLY one who can safely operate a motor vehicle, and THEY are the ones who cause the accidents.

>....."and is a lot healthier."

This is NOT correct. It is your opinion. Medical facts prove otherwise.

>Smoking a
>joint in the privacy of one's own home is certainly not.

Again, I agree. However, just like alcohol, it usually doesn't stay there. When "legalized", it will be in parties, bars and anywhere else one cares to consume it "because it's my right". These people are first and loudest to proclaim THIER rights, but usually shrug thier shoulders when countered with the suggestion that people who do NOT use it are of right to be afforded protection FROM it's use....like pedestrians, other motorists, etc.

>The wife is just as dead either way.

True. And the cost of an IV catheter and the necessary chemicals to ensure it never happes again comes to just under $100.

73

>I've NEVER placed the blame on the rig. It lies squarely on the
>shoulders of the operator..."Personal Responsibility" is what I
>believe I've heard it described as.

I don't think a rig will transmit on its own. However, I don't think an operator will transmit without a rig. If either is eliminated, the problem is solved.

> When The ARRL involved itself with the legal efforts of legal CBers, it

missed a

> valuable opportunity to gain an ally in the "war" against "export" rig
> availability.

Why, people and organizations can work together in some areas and still disagree with each other in other areas. Many of the people I work with on RFI matters have different views than I about lots of things. The solutions to many of our problems are not found in the things we disagree about; they are found in our common ground. And if removing export radios and amplifiers truly is a priority for the legit CB community, I suggest that they ally themselves with everyone that they can.

Who knows, by doing so, maybe the next time there is an opportunity to disagree, the improved communication will prevent the disagreement. It has worked for me over the years far more often than not.

> as ex- (and current) 11 meter ops become hams, league members, and more
> politically savvy...

As ex and current 11-meter ops become hams and ARRL members, they have the tools to shape the League to be anything they want, if they can field 8 candidates for Director and convince half of the voting ARRL membership to vote for their candidates.

>Now is the time that we can possibly compromise and meet "somewhere in the
>middle."

Then work on the common ground. Win, lose or draw on the rest, that will be worth the doing.

Hi again Ed,

>I don't think a rig will transmit on its own. However, I don't think an
>operator will transmit without a rig. If either is eliminated, the problem
>is
>solved.

Your presumption is correct, provided ALL avenues of obtaining those rigs are blocked. I personally don't believe that is possible. I feel the "grey market" will always supply what is in great demand. I share that view re. drug enforcement as well, target the user, not the dealer. In my earlier years as an "associate programmer," I put in the requisite time "in the city." I rather see the "Biffs" and the "Brads" on Wall street get busted than the sleazeball on the corner "uptown," where these guys go to "score" their dope. Ruin a few "budding careers" and the resulting drop-off in demand will take care of said sleazeball all by itself.

I'd rather see the "freebander" eliminated by educating him/her and gently nudging them in the right direction. In order to educate someone, you need to make that person "approachable." You do NOT accomplish this by calling them a "chicken bander" or interfering with their legal efforts re. a FCC rule making proposal. It's done by opening a dialog and attempting to gain some insight into "why" they engaged in said activity (Unlike some here, who claim to know exactly why they do it. ;-p) and showing them how much they're missing. Doesn't work for all, but definitely a sufficient number to warrant a change in tactics. Sorry, sermon ended...whew! :-) Then take those "export" rigs and slap transverters on em' and have a ball.

I couldn't agree with you more, Ed. If I may pay you a compliment at the risk of drawing the ire of some of the "angrier" participants of this NG; I find disagreeing with you a far more pleasurable experience than I have found when discussing issues with others with whom I'm (supposedly) in total agreement. Thanks for making it more than just a useless exercise. Although you appear to disagree with what I ask of others, you actually go ahead and do it.

Alcohol impacts society. Why is alcohol legal? Why was prohibition repealed?

> Unfortunately, YOU are having to suffer the tribulations of "drug laws"
> based upon the actions of the majority of the REST of society.

Actually, about 25% of the country is not suffering the tribulations of drug laws. If you are part of the white upper class, you don't have to worry about drug laws.

> The use of a restroom is not about to cause a motor vehicleto cross the centerline and kill some innocent citizen.

Would you get off that kick? Driving and using drugs are unrelated except by real criminals. It is legal to consume alcohol. It is illegal to drive while DUI. That is exactly as it should be.

> Any person who causes a death while comsuming thier favorite recreational drug should be either hung with a hemp rope or a lethal dose of whatever the drug of choice was.

I agree 100%, Steve. But please don't punish the 95% of the citizens who don't cause any problems while drinking or smoking.

> Drug dealers should be publically executed.

Using exactly the same logic, gun dealers should be publicly executed.

Why not make it a capital offense to engage in DUI? I'll vote for that.

> Medical facts prove otherwise.

Oh? We can't do any research because it is a class A (1?)drug. The last valid research was done by the mayor of NYC who wanted to prove that marijuana had bad side effects. He failed. Jamaicans smoke marijuana and get a lot of lung cancer. Bingo, marijuana causes lung cancer. Nope, Jamaicans lace their marijuana with tobacco.

--
cheers, Cecil

Nope, with freedom comes responsibility. Citizens should be held responsible, including financially, for their actions.

> >We should wake up and
> >treat drug problems as social problems, not as crimes.
>
> Most of the time, the users of drugs are treated like social problems.

That's true if you're white and have some money. Why do you think the penalties are so much harsher for crack cocaine than for powdered cocaine?

> And Cecil,
> do you believe mainlining heroin is healthier than drinking alcohol?

"Healthier" doesn't enter into it. Bung cord jumping is unhealthy for some people but they decide whether it is worth the risk or not. The individual should decide whether heroin is worth the risk or not. I would never use heroin but I believe you have a right to do so if you so choose. I ride a Harvey without a helmet. That's not very healthy but I enjoy it, am aware of the risks, and carry enough insurance to cover any accidents.
--

cheers, Cecil

>>is solved.

>Your presumption is correct, provided ALL avenues of obtaining those rigs are
>blocked. I personally don't believe that is possible. I feel the "grey
>market" will always supply what is in great demand.

Perhaps so, but I think it the illegal equipment could be driven underground enough where it literally was a guy standing on the street corner with a long overcoat and a collection of watches and leenyars, a really good dent would have been made.

> I share that view re. drug enforcement as well, target the user, not the dealer.

Not many of the professionals responsible for drug enforcement share your view.

>I'd rather see the "freebander" eliminated by educating him/her and gently
>nudging them in the right direction.

I agree.

> In order to educate someone, you need to
>make that person "approachable." You do NOT accomplish this by calling them a
>"chicken bander" or interfering with their legal efforts re. a FCC rule
>making proposal.

Name calling never helps, as can be seen from those that do it here. I don't think the name callers really have the respect of those reading their posts. Interfering with their efforts would, IMHO, be a bad thing. To my knowledge, that didn't happen; no one prevented them from filing an FCC rulemaking or from making comments on same. Comments of those with a different view were filed, but that is a process of law. To use that process of law to justify illegal acts in any way is simply not logical.

> It's done by opening a dialog and attempting to gain some insight
> into "why" they engaged in said activity (Unlike some here, who claim to know
>exactly why they do it. ;-p) and showing them how much they're missing.

Do you really think most freebanders or those who shoot skip on 11 meters are not aware of Amateur Radio and what can be done within it?

> Then take those "export" rigs and slap transverters on em' and have a ball.

What percentage of export radios do you think are operated in the Amateur Radio Service with a transverter?

>I couldn't agree with you more, Ed. If I may pay you a compliment at the risk
>of drawing the ire of some of the "angrier" participants of this NG; I find
>disagreeing with you a far more pleasurable experience than I have found when
>discussing issues with others with whom I'm (supposedly) in total agreement.

Many of the people I consider friends on this forum do not share my views on every issue. Over the years, I think we have learned from each other, though, and that could only happen if disagreement was cordial and if we both recognized that the other person reached a different conclusion from the available data. That happens, and somehow, by talking it out, sometimes some really cool things and unexpected understandings can result.

>Thanks for making it more than just a useless exercise. Although you appear
>to disagree with what I ask of others, you actually go ahead and do it.

There are four stages to getting things done:

plan the planning
do the planning
plan the doing
do the doing

It is the last one that seems to be the hardest. With what I do, it is easy, although rather daunting; there is just so much important stuff to do that I couldn't imagine myself doing anything else. In that light, I consider myself the luckiest man in the world! :-)

No, you don't, Cecil. In the first place, you don't want to get me going on gun abuse. We are friends and it is best we keep it that way. As to the others, picking 3 subjects that are not abused 1/10th as often, nor with the same devastating consequences to society, as hard drug abuse is simply an incongruant comparison. I have never felt afraid that I will be mugged by an ice-cream junkie looking for his next fix.

> >You are a horses ass, with nothing good to say to anyone
>
>      You use profanity then chastise another for "(not having) anything
good to
> say to anyone".  Nice job here, too.
======================================================
No! nice job on your part  numbnutz,  Since when is Horses Ass profanity.
But what should it matter.  I am treating you the same way you treat others,
I find this is the best way to get thru to guys like you. Its called a taste
of your own medicine.

> >What good does a name do?
>
>      It gives you credibility and proves that you have the intestinal
fortitude

=======================================================
I know you buy a name you post by on the computer do I think this makes you
credibile or any more credible than the next guy. Nah sorry its the content
```

```
of ones speech which gives credibility. Not some stupid name or nickname on
a NG. Chip and the rest of the Fractenna gang uses there names are they
credibile?

>
>      You have the resources of a computer but can't verify the information
> given you?  You are anonymous AND stupid.
=======================================================
No you are the stupid one, Tell me ohh savy one you also have a computer
tell me what my name is don't you have the same resources as me. Besides I
told you my name is Irving Finkelbober, and Just like you told me your name
is  Steve. We both have the same information as each other. Who is more
credible?
>
> >is that the "Gospel"

----------------------------------------------------------------------------
----------------------
Well give me your ISP name and number and maybe they will tell me actually
who you are, otherwise You as credible as my ballsack.

>
>      I see you are in the "Do As I Say, Not Do As I Do" mode vis-a-vis
"nothing
> good to say".  Typical.
======================================================
Yes I am in the Steve Robeson mode, Nothing good to say, I watch how you
talk to people and figure I mind as well do as you.How am I doing. Catch you
on 14.313 tonite? Ill be the guy calling CQ with the callsign K4YZ

> >I also got your pokemon swinging.
>
>      I am sure you do.  So do most male neonates.
----------------------------------------------------------------------------
-----------------
I hear alot of male nurses like things that swing? Is this true?

>
>      I am sure you THINK so.  But so far you have given us NO reason to
believe
> ANYTHING you offer has ANY validity.
======================================================
Again Steve Don't I remind you of you. Nothing you say has any validity,
just sarcasm .
>
> >I am your new best friend
>
>     You may think so, but I doubt that you have ANY friends, let alone
know the  meaning of "best friend".
======================================================
No Steve I really am, I think we are going to get along just fine.

>
>      Perhaps I could offer you a complimentary "Hooked On Phonics"
package?
====================================================
Is that what you studied? If so I rather pass.

Perhaps I can send you to the NG  FAQ's page to learn how to read posts.
Ain't that right redneck. Listen for me on the air tonight!

>have been made.

Think that "export" rig or "leenyar's dirty now? Just wait until they're sold
by the guy on the corner. Although I've NEVER run an 11 meter amplifier, (I'd
hardly call many of them "linear.") I do acknowledge and have heard the
difference between a "Hurricane 350" or a "Shooting Star" (circa 1983) driven
"full out" and a "Texas Star" (circa 1999) driven at "half throttle." I don't
like either, but will choose the lesser of the two evil every time.

>
>Not many of the professionals responsible for drug enforcement share your
>view.
```

Just my Dad, that's where I got it from. The same man who had to help satisfy the precinct's "quota" (You know, the one that doesn't exist.) of hooker busts on Mon., Tue., and Wed., while having to serve as protection for a certain "affluent" group in Brooklyn (same precinct) to ensure that they could cross (on foot) the BQE safely, get their $15 service unmolested, and return unimpeded to "home' turf on Thu. and Fri. I had a tough time fathoming how this could be possible until I realized just who "paid the bills. Didn't make me any less sad about the situation though.

>To use that process of law to justify illegal
>acts in any way is simply not logical.

Agreed.

>Do you really think most freebanders or those who shoot skip on 11 meters are
>not aware of Amateur Radio and what can be done within it?

No, certainly not all, but some. However, if you treat them with disdain from square one...you'll miss the opportunity to reach those that truly do not. If you check my bio on QRZ, you can read about the affects of a negative first impression. Like I said, I should've just shrugged it off, but I was young and the privileges of that Novice ticket did NOT outweigh the "kiss my a$$" reaction to that first encounter. Had I truly understood the full scope of what I'd be missing, those comments would have slid off me like the slime that spoke them. Perhaps if I'd met my eventual Elmer then and been guided elswhere, the story would've "started" differently. In any case, the responsibility has always lied squarely with me, I recognize that, accept it, and thank god for being the beneficiary of "fools luck." (aided by some prudent RFI precautions and very NON lid operating practices) As always, at the risk of being "burnt at the stake," I offer myself as an example and thus endeaver to "lead by example."

>What percentage of export radios do you think are operated in the Amateur
>Radio
>Service with a transverter?
>

I can only vouch for my own...but every tally begins with one, right? There is a measure of satisfaction int putting the President Lincoln legally on 2 meter SSB rather than spending $1400+ for the new ICOM 910H. I do like that new Ten-Tec though, I'll wait and see how it fares when it's put through it's paces. Now that's what I like to see my ARRL dues pay for. I also like the idea of buying an American made product. I'd seriously considered buying a Patcomm because it's manufactured (wrong term...made) just down the road from my QTH, in St. James, NY. However...the ARRL reviews were not too kind. ;-)

>I consider myself
>the luckiest man in the world! :-)

Most deservedly in this "young" (at heart) ham's eyes. In my experience, luck is often assisted by actions. What can be truly marvelous to witness, is when one's actions result in good luck for others as well. Thanks again Ed.

But in that description you are describing illegal
activity....not CB. The trap or fallacy is that some
people tend to paint such illegal use and operation
as part of CB when it is clearly NOT any part of
legal CB.

> alcohol legal? Why was prohibition
> repealed?

Well, you're consistent, Cecil. We "discussed" drugs just a few weeks ago and you're still using the exact same arguments. As we discussed last time, alcohol does not impact society to the extent _INCREASED_ use of marijuana would (see next paragraph). The same statement is true with "tobacco" or "guns" replacing the word "alcohol" (both brought up by you in the last discussion).

As we discussed last time, alcohol use increased after prohibition ended. Therefore, we can certainly expect marijuana use to increase if it were legalized. After that, it is only a matter of simple math. Take the current marijuana users, and the problems associated with current users, and then increase both in proportion to whatever level you desire (your estimate of potential use after legalization). In each case, the problems are more than we would want to deal with in this society. For example, if marijuana use increased only to the level of current alcohol use, the problems associated with that marijuana use would greatly exceed anything presently associated with alcohol (even more so if we talk about tobacco or guns instead).

Likewise, as we also discussed last time, even if the problems from marijuana use only equaled the problems associated with alcohol use, only a fool would want to _ADD_ to the problems we already have with alcohol use. In other words, it would not benefit society to increase the problems we already have by adding legalized marijuana to those problems.

Of course, if we take your pro-drug argument further, and talk about harder drugs (heroin, crack, cocaine, etc) instead, the potential problems from increased use after legalization would be absolutely crippling to this country. The financial costs alone would be staggering (far exceeding the drug war), not to mention the human costs.

No, my friend, I'll never accept legalization of drugs. Only a drug user, or someone too self-centered (or stupid) to see the big picture, would. Anyone who truly cares about this country, and it's people, would be appalled by the idea.

>Steve, I am not here to impress anyone unlike you.

And so far you are not. Good work.

>You are a horses ass, with nothing good to say to anyone

You use profanity then chastise another for "(not having) anything good to say to anyone". Nice job here, too.

>What good does a name do?

It gives you credibility and proves that you have the intestinal fortitude to stand behind your assertions, right or wrong. However in YOUR case, I am sure your desire to maintain anonymitity has a lot to do with a lack of certainty as to what your name really is.

>I mean how do I know who you are, just because you post a name on a computer

You have the resources of a computer but can't verify the information given you? You are anonymous AND stupid.

>is that the "Gospel"

I am trying to answer your inquiries but have to wade through your lack of use of capitalization and punctuation. No wonder you don't have the skills to figure out if the "Steve, K4YZ" posting here really IS K4YZ.

No, it's not "the Gospel". I never said it was.

>Don't think so Jack Ass

I see you are in the "Do As I Say, Not Do As I Do" mode vis-a-vis "nothing good to say". Typical.

>that should be your name.

Then for you, so it shall be. Be Happy.

>I also got your pokemon swinging.

I am sure you do. So do most male neonates.

>You talk shit instead of ham radio

I am sure you THINK so. But so far you have given us NO reason to believe ANYTHING you offer has ANY validity.

>I am your new best friend

You may think so, but I doubt that you have ANY friends, let alone know the meaning of "best friend".

Perhaps I could offer you a complimentary "Hooked On Phonics" package?

>First Amendment freedom.

Nope. That's an attempt to counter vileness and bitterness. No one, least of all me, want's to keep you from posting anything, Len. It's far better to keep your opponent where you can see them.

>On public record a couple of days ago in this newsgroup is a
>copy of Robeson's attempts to control/stifle another radio
>amateur's statements at QRZ.COM, namely Bruce Beynon,
>WA8ULX.

I see...and trying to blunt rudeness and offensiveness is "censorship"..?!?!

Yeah...right.

>That's telling the truth and verifiable by anyone.

That I authored a complaint is true. In as much as it happened in a public forum is NOT censorship.

>That's up to Robeson. I care less except for all those times
>when Robeson has been incorrect, not factual, never giving
>references to supposed "facts."

Kind of like you, Len? You have a historical track record of your own that includes avoiding direct answers, name calling of your own, and out-and-out lying.

Nothing "supposed" about any of it.

Now...you have yet to acknowledge any of the last weeks' efforts to temper the rhetoric...you simply lapse back into the same pattern.

Not that I expected anything different...but there is always hope.

>"volunteerism" being "more established" in eastern and southern
>cities is a personal geocentric viewpoint not borne out by published
>facts.

OK, Len...YOU assert "...not borne out by published facts". Now, WHICH published facts are these?

Authors? Publication title?

>The most populous state in the union is spelled California, not
>"Californica."

Gee..THANKS, Len! Did >>I<< do that...?!?!

>Hurricanes are rare in California or even over the whole of the west
>coast...yet they are an annual event on the east coast and on the
>Gulf coast (see TX and LA of recent days)..

Gee...NO KIDDING Len..?!?! For real...?!?! I thought all those stories I read in QST, CQ, Emergency Medical Services, and Journal of Emergency Medical Services (JEMS) were all fiction.

>No fact, just another geocentric pejorative, an insult hurled by
>those against states not their own, regions not their own, for
>varying personal reasons. Not at all factual.

From 1979 to 1983 and again from 1986 through 1992 I was not only a resident of Californication, but I was a proactive member of various EMS agencies (Orange County and Inland Empire), ARES, and the Orange County Chapter of the American Red Cross, not to mention working in the ER of two different OC

ER's at various times. (Hoag Memorial in Newport Beach and IMC in Irvine)

Guess that wasn't enough to formulate an "informed opinion" in your estimation, Len?

Per your own comments in RRAP, your last "volunteer" effort in such matters in CA (or anywhere, for that matter) was as a laborer in early 1970-something. From THAT event you have sufficient "data" to discuss the topic?

I am still subscribed to professional EMS journals that discuss current day matters. Do YOU know better than THEY do...?!?!

(I am SURE you do...no need to waste our time, Len.)

>"At one time" is not a specific reference nor can I believe that
>Robeson regularly, or even irregularly, reads the WSJ.

That's OK, Len. I am not concerned about what you believe.

I, on the otherhand, KNOW you DON'T read any current Amateur periodicals in-as-much as your rants here prove you are not situationally aware.

>The equivalence of "17th or 16th GNP as a 'nation'" for California
>has been widely quoted in the news by CBS, NBC, ABC, CNN,
>CNBC, PBS TV networks and in the New York Times, USA Today,
>and Los Angeles Times newspapers throughout 2000 and 2001.

And I do not believe that you personally observed those reports on ALL those media sources. I DO believe you scanned through the "TV Guide" and quoted those cable channels that sounded most likely to discuss financial matters, even in passing.

As for the rest of the post, interesting reading. Whether it is "sixth" or "16th", Californication still has greater assets and resources than the other States of the Union. And far more imperitive need to have the ES resources on-hand than most other States from it's disaster-prone history.

>Such a long length requires more
>communications lengths as compared with Rhode Island, yet
>Rhode Island has a GSP/capita close to California.

When one considers that Rhode Island has nothing close to the transient and indigent population as California, it's not that hard to do.

>What you are dealing with is human stupidity, not drugs, Steve.

They are one-in-the-same. You cannot seperate the two. "Drugs" generally don't occur naturally. (Yes, I know some do ie:cannibis...I am speaking of refined, "hard core" recreational pharmaceuticals)

It takes human intervention to create this mess.

>You also deal with the results of tobacco. Do you advocate outlawing tobacco?

Yes, I do. I also favor (a) taxing the be-jeebers out of it to offset the loss of revenue expended to care for tobacco related illnesses and (b) allowing insurance companies to deny major portions of claims submitted by smokers for thier smoking related illnesses or to charge significant premiums for smokers...And I mean PREMIUM.

Smoking is a voluntary act. Make individuals responsible for thier actions. (like THAT will ever happen!)

>When are we going to stop blaming inanimate things for human actions?

No Drugs = No Drug Abuse. "Legal" drugs or otherwise.

Will it ever happen...?!?! Of course not. But we can limit our liabilities.

Care to join me in the ER for a few days, Cec...?!?!

Agreed with enthusiasm. As pointed out by another (N2EY...?!?!) the FCC has stated that they are bound by the treaty and have no intentionof unilaterally ignoring it. They have, however, provided for the least difficult test that complies with the spirit AND the letter of the law.

For them to NOT move to drop the code test after S25.5 is deleted would be foolhearty. I can almsot imagine that a draft has already been prepared just so they can get it done and over with on Day One!

I think there have been more bad words on this forum directed toward freeband operation and even legitimate CB than there have been bad words directed toward pirate broadcast radio.

Hi Bill,

>Just what is not right about CB (assuming the CBer and
>CB operation is according to regulations?

Assuming that your parameters are met, Bill, NOTHING at all! I DO still have a CB and use it on occassion. I have friends who talk on it and have NO interest in "radio" above and beyond a short range communications tool. For them, CB and/or FRS and MURS would be perfect options.

>CB has many good uses for those not technically
>inclined enough to desire a ham license. My car club
>uses CBs when we convoy to shows. Makes for
>a much more enjoyable trip.

I agree wholeheartedly. My consternation with CB is the lawless operations that make it very difficult if not impossible to use CB for it's stated purpose as codified by Part 95.

The assertions by a few that I don't like CBers or CB is a lie. I don't like ILLEGAL operators. (Be they on 11 meters or any Part 97 authorized allocation, for THAT matter!)

>> We agree, Dick; it is very clear from even a casual perusal of ARRL
>programs,
>> staffing and material that its priority is Amateur Radio.

> As a second priority, sure. The first priority is keeping, preserving
>and enhancing ARRL.

I had posted a list of major ARRL functions. Do you care to comment on that list item by item as to what percentage of the resources are used to preserve ARRL vs the percentage of resources used to preserve Amateur Radio? What percentage of my time do you think is devoted to preserving ARRL and what percentage do you think is devoted to Amateur Radio? The Lab's test engineer's time? The Technical Information Service? The QST article editors? The Book Team editors? The volunteers in the Field Organization? The volunteers that set the ARRL policies on the ARRL Board of Directors? The contest folks? The DXCC

folks? The people that work with school children and teachers? With SAREX?
We can add to that the ~8 people who work in pub sales and the Circulations
Department, then the money spent on an outside janitorial crew, the purchasing
and personnel departments, etc. Add up your estimates, Dick, and give me your
approximation of the percentage of ARRL resources directed in each direction.

>Now there's a garden that needs weeding. The 11 meter garden is "not an
>amateur radio concern." (A direct quote from The ARRL, your...er, OUR league.)

What goes on under Part 95 is not an ARRL concern, IMHO. But those that
operate freeband are operating outside of Part 95, so, IMHO, they are fair
game. And some of those weeds are spilling out of the garden and into mine and
that IS Amateur Radio's concern.

It is my opinion that this problem will persist as long as illegally modified
"export" radios are freely available and amplifiers are openly advertised on
web pages and truck stops. To that end, I hope that ARRL does try to bring
some pressure on the FCC to deal with the illegal equipment. It is affecting
Amateur Radio and it will continue to do so until it is stopped.

> For the ignorant and cowardly, nursing was originally a "man's" job. It
>was only through the tragedy of war that women were, in most >"western"
countries, called upon to do this task to allow men to fight.

AND.....while responding to the call to DO those things, had to simultaneously overcome the "stereotypes" and allegations of being whores and "women of ill repute" because the were required to bathe and touch the bodies of men. Imagine being a nurse without having to touch the patient. (rubber gloves and "universal protection" were only "universally accepted" in the latter half of the 20th century)

Indeed, many of my female colleagues must still try to overcome the "Laugh-In" vision of the bimbo "nurse" all-the-while having sheppered patient care technology into the light of day.

Hardly a "wimpy" accomplishment. Hopefully Bruce will never find himself in circumstances requiring the application of those skills. However if he does, I hope God delivers him to MY facility!

THAT would be justice!

>>
>>Conclusion: Without S25.5, FCC would have no reason to keep code test.
>
>The Axiom is incomplete. :-)

How so? The FCC has said that S25.5 is the ONLY reason for continued code
testing in the USA.
>
>It ignores many comments during and after the 98-143 NPRM Comment
>period, the recent policy statement by the ARRL BoD in regards to
>"keeping the code test [for a US administered exam]" and many
>other statements by the PCTA. It's rather obvious to everyone that
>many, many radio amateurs want to keep the code test.

The axiom is about the FCC's opinion, not the opinions of others. FCC
specifically rejected all other reasons and opinions for code testing in their
Report and Order on 98-143. The only reason they found compelling was S25.5.
>
>>Do you think the FCC would keep the code test without S25.5, Len?
>
>I really don't know.

Try reading FCC's words on the subject since 1990 or so.

>I cannot discount the superior amateur extras
>who insist that morse code is such an essential, versatile, mode
>[see K3LT for a full list of appropriate adjectives].

It's the TEST, not the MODE. FCC supports Morse code USE, they just don't see
that continued code TESTING serves any regulatory purpose other than meeting
the letter qnd spirit of S25.5.

>The FCC will
>listen to all citizens. If enough citizens say that the code test must
>be kept, then they might consider it necessary to retain it.

Hope springs eternal.

>Or not.

The FCC ignored a majority of commenters to the restructuring NPRM by reducing code testing to 5 wpm. A majority of commenters had supported at least two code test speeds, but FCC did not listen. It's NOT a simple majority vote by any means.

FCC has rejected other petitions to change ARS rules that were widely supported, simply because they did not see that the petitions served a regulatory purpose.
>
>I cannot predict the future with certainty.

Neither can I. The discussion was about whether retaining code testing without S25.5 would be consistent with previous FCC comments on the subject. I have proved beyond a reasonable doubt that it would be very inconsistent for the FCC to do so.

>My balls are not made of crystal.

I will take your word for that.
>
>>My good
>>friend K2UNK has assured me that the FCC will be petitioned to remove all
>
>Bill is a "good friend?" :-)

Of course. While we disagree on many things, K2UNK has always been a reasonable, friendly, intelligent, consistent poster here. I have a lot of respect for him. I consider him a good friend. Friends can disagree without being disagreeable.

And while I may disagree with Bill's views on some amateur radio policy issues, and he disagrees with some of mine, I think both of us have the best interest of the ARS in mind.
>
>>... How could FCC deny such a petition
>>and still be consistent with their past 10 years of statements re code
>>testing?
>
>How could the FCC retain the code test for many more decades?

Why do you answer a question with another question?

When I find a way for the FCC to retain code testing for many more decades, I'll do what I can to get the FCC to implement it. All constructive suggestions appreciated.
>
>>>The FCC has not
>>>attempted to predict its own future decisions well in advance of
>>>any NPRM.
>>>
>>So? They don't have to explicitly predict their actions. The FCC's intended
>>path is clear to anyone who looks at the information in a reasonable manner.

>
>Noooo.

Yessssss.

> The probability of future action is high that the code test
>will be removed if S25.5 is changed. Probability.
>
When you argue minor semantics like that, Len, it's obvious that you know I'm
roght but won't admit it.

>There is no such thing as a "clear path" to the future. In anything.

Sure there is. That's what engineering is all about.
>
>>>>>The code test still exists for General and Amateur Extra class
>>>>>licenses.
>>>>
>>>>That test has been reduced to the very minimum that reasonably meets the
>>>>requirements of S25.5.
>>>
>>>Incorrect.
>>
>>No, it's perfectly correct.
>
>Terribly, badly, not-good incorrect.

Absolutely, completely, perfectly, consistently correct.

> S25.5 does not specify any
>code rate. There can be no "very minimum" when there is no
>quantified code rate given.

Sure there can. The very minimum is derived from the standards of those
knowledgeable about the subject. Those knowledgeable about the subject agree
that 5 wpm is the very minimum that meets the letter and spirit of S25.5.
>
>>> Article S25.5 does not, repeat not, state any code
>>>rate. There is no, repeat no, "minimum" nor any "maximum"
>>>code rate specified in S25.5.
>>
>>For manual Morse use, 5 wpm is very slow, by any reasonable standard. It has
>>long been the absolute minimum standard test used by any country. The
>>consensus
>>of those who are knowledgeable about the subject is that 5 wpm is the very
>>minimum that reasonably meets the requirements of S25.5. Note the word
>>"reasonably".
>
>S25.5 does not specify any code rate.

Why do you keep repeating the obvious, Len?

>Ergo, there can be no

>quantifiable "minimum" or "maximum." The code rate is all
>left up to individual adminstrations.

ALL of whom agree that 5 wpm is the very minimum that meets the letter and
spirit of S25.5.
>
>>Do you want a slower test, Len?
>
>No,

Then why all of the blather about 5 wpm?

> I want S25.5 to be changed to simply state that no
>administration need require any code test to obtain any
>amateur radio license...perhaps adding the definition that,
>for OOK CW communications, the morse code is defined
>as International Morse Code.
>
Then why all of the blather about 5 wpm?
>
>>>Rhetorical hypothesis. There is NO such prohibition.   :-)
>>
>>But it is not supported by a reasonable analysis of the facts.
>
>Hypotheses are simply hypotheses. A hypothesis may be
>based on facts but facts can seldom "prove" any hypothesis.

Totally incorrect. Hypotheses vary all over the place in reasonableness and
provability.

For example, I may hypothesize that the sun will set in the west today (as
observed from a givem point on earth). That's a very reasonable hypothesis,
based on previous experience. The hypothesis that the sun will rise in the
west tomorrow morning is not very reasonable. Both are provable/disprovable by
simple observation.
>
>Negatives cannot be "proved."

What negative is to be proved? There are two possibilities here:

S25.5 ends and FCC discontinues code testing because of it

S25.5 ends but FCC continues code testing without it.

>Negatives are non-existant.
>
>There is nothing right now in all 11 articles of S25 that prohibit
>any nation's administration from requiring a code test. S25.5
>is so worded that it's second sentence reads: "The
>administrations concerned my, however, waive the requirement
>in the case of stations making use exclusively of frequencies
>above 30 MHz."

The discussion is about what the FCC will do.
>
>The first sentence of S25.5 requires the code test. The second
>sentence allows a waiver of that code test. There is nothing in
>all 11 articles of S25 that prohibits any administration from
>requiring a code test for any amateur radio license.
>
So? What's your point, Len?

Got that Extra out of the box yet?

Those of you who reply to Prozac have forgotten the basics in dealing
with such people, on-air or on-internet. They are emotional parasites
feeding on your annoyance. Every time you respond, you feed their
egos. Like any parasite, remove the food source and they eventually
drop off.

One word: Addiction.

There are some substances that, when ingested, can cause addictive behavior in
humans. Nicotine, the active substance in tobacco, is such a substance. The
active substances in heroin, cocaine, and several other "drugs" also exhibit
this effect.

Chicken and an egg lying in bed.
Chicken sitting there, big grin on it's face, smoking a cigarette.
The egg sitting there, obviously very unhappy.
Chicken leans over, looks at the egg and says..

Guess that answers that question?

I wasn't offering the opinion that anyone would be turned off (I don't think too many normal people would be), just the basis of your test.

Hang on, I think I see a flaw in my post as well. I'm not sure normal people read this NG. ;-)

Experience doesn't change principles, Steve. An adult has a perfect right to ingest whatever he/she chooses. A silly law against smoking a God-given weed doesn't change that principle. Smoking marijuana wasn't even illegal until the government needed something to control the illegal alien problem.

Vehicles cause magnitudes more deaths than marijuana. Why aren't you advocating outlawing vehicles?

Attempting to undersand the deepest, darkest fears of the paranoid "They Will Force Morse Code On Me Yet" mind, I envisioned the following. No names have been changed to protect anyone. It's a frickin' parody, so get a grip!

Len Anderson>>The Axiom is incomplete.

Jim Miccolis >How so? The FCC has said that S25.5 is the ONLY reason for continued code testing in the USA.

The Story:

Situation: April, 2004, Newington, CT. The WRC2K3 has concluded and it's recommendations have been disbursed to the various administrations around the world. S25.5 will go........

In a closed-door conference consisting of Larry Roll, Ed Hare, Steve Robeson,Jim Miccolis, Dick Carroll, Brian Kelly, several ARRL Board Members and former presidential candidate and multi-billionaire H. Ross Perot, Mr Perot is briefed on the impending end of world order as the capitalist world knows it since S25.5 was recinded in Geneva.

Convinced that the United States is blindly falling into anarchist's hands as a result of the Geneva conference, he donates nearly all his wealth to the now blood-bonded conspirators as they set about to overthrow the Government of the United States by force.

Fast forward to September 2004....the plans laid and the loyalties of nearly all the General Staff of the Armed Forces having been obtained, a pre-dawn strike against known technology centers of the United States occurs, almost completely "blinding" most wireless and digital data communications techniques. Almost immediately, CW communicaitons fill nearly every military communications channel. A lone soldier carrying a man-pack radio quickly sets up, aims his antenna skyward, and hands the key to General Of The Armies Dick Carroll.

He sends his message skyward...."QRV QRV QRV"

In an already orbiting Space Shuttle, the Chief of Staff of the Air Force Brian Kelly himself leads attacks against almost all communications and broadcasting satellites. Looking wistfully at the technology in front of him, he agonizes over the irony that in just 6 hours, his crew will dismount this proud bird back on Earth and set her on fire. "Oh well..." he muses, " at least I will be home in time for the November Sweepstakes!"

In Dover, Delaware, Larry Roll, leading the New Communications Order, leads an armored calvary assault on Washington DC. The Armed Forces, having been sworn to the New Order, wave the columns through and the White House and Congress are quickly secured.

Gleeful, Larry whips out his Vibroplex bug and signals to his co-conspirators .-- .   .... .- ...- . ... ..- -.-. -.-. . -.. . -.. -.. .
-.- ...-- .-.. -

Meanwhile, on the west coast, a U. S. Marine Corps Force Recon team, led by retired Gunnery Sergeant Steve Robeson, drops by HALO insertion to a sleepy suburb in southern Californication. Landing silently, they quickly verify their target then lead the attack with stun grenades and deadly efficiency. No other shots are fired.

In the dim light of the street lamps, thier prisoner is dragged from the unassuming home, and a J-38 key thrust into the decrepit old man's hands. "SEND, DAMN IT! IF YOU WANT TO LIVE, YOU HAD BETTER BEG IN MORSE!"

A woman begs her husband to do as he's told, but he stands defiant. A single round rings out in the still of the night and the now-widowed woman is left sobbing..."Lennie...Lennie! >>I<< can do five words per minute, why wouldn't you...?!?!"

The entire revolt is over in a matter of days. In a bulletin sent out by W1AW, America is told that in thirty days all further news and communications will be carried out in Morse Coded bulletins only and on HF, and they have until then to learn at least five words per minute. All High School students will have an additional 30 days to be at 13 words per minute and all adults will be at 20 WPM no later than New Years.

All 9-1-1 centers are quickly refitted for Morse capable wireline systems and all E911 systems are quickly burned. When asked what will people do now, Jim Miccolis glares at the interogator and says "If they didn't know how to send "SOS", it must not have been a REAL emergency!" The deaf are allowed to keep thier terminals, however they are required to get a physicians waiver to ensure they really ARE deaf.

A small resistance force quickly withdraws to the mountains of Colorado, (summoned by the last remanants of the PACKET network) surrounded by the BoD of NCI, however they are quickly found and are hanged as traitors by the microphone and TNC cables they brought with them.....Bill Sohl is heard to scream "LONG LIVE DIGITAL" as the trap door deploys.

Down in Dallas, Texas, recently crowned Emperor of the Analog States of America, Ross Perot, appoints Ed Hare as his Prime Minister and sets him about the task of creating OO Squads to destroy every PC and CB radio they can find. The ARRL BoD is appointed to various Cabinet Ministries.

Riley is Transfered from the FCC to the newly created "Royal Ministry of the Radio Enforcer". Granted new enforcement powers, the US Marshals and Secret Service are put under his jurisdiction, and in cooperation with the DEA, they set about setting up communications re-education camps. Drive-in theaters around the US become veritible tent cities as the decadant users of cellphones, laptops and WebTV are reintroduced to analog communications and reruns of "I Love Lucy".

Meanwhile, on a deserted, long-since-abandoned Mexican waypoint, a lone bedraggled rider on a Harley stops, takes a long swigg from his wine decanter and looks longingly over his shoulder. He belches, wipes the slight dribble from his chin, and wonders how difficult it will be to pass the Mexican Amateur Radio exams after having been drinking all night. "I guess "XE1RCA isn't such a bad call......"

73 and sweet dreams, America........

Steve

>Experience doesn't change principles, Steve.

No..it doesn't. But if you can still look someone in the eye and suggest that legalizing drugs is a viable options after watching a junkie in convulsions, I have to call your principles into question.

>An adult has a perfect right to ingest whatever he/she chooses.

Thankfully, at this particular moment, that is not true.

If it were 100% possible for someone to consume "recreational pharmaceuticals" without creating a dangerous enviroment around them, then I would likewise support your contentions, Cecil.

Unfortunately, most Americans THINK they are able to do this safely. I don't know of anyone who did this and then set out to intentionally hurt someone, including themselves (suicidal ideations not withstanding)

>A silly law against smoking a God-given weed doesn't change that principle.

If that "silly law" at least deters a potential DUI from driving into my family, then I could care less that it impedes someone's partying. Oh well. No one's life is worth someone else's "right" to get high.

>Smoking marijuana
>wasn't even illegal until the government needed something to control
>the illegal alien problem.

Regardless of the original intent, it has validity today.

>Vehicles cause magnitudes more deaths than marijuana. Why aren't you advocating outlawing vehicles?

There are laws regulating the use of motor vehicles and penalties for NOT using it responsibly in every State of the Union. Why should it be any different for substances that can altr human behaviour to the point of loss of control of one's faculties when that loss can cause loss of human life?

Is my family's (and any/everyone else's) safety less important than your "right" to get high?

73

When I took the test, they used 13wpm@5wpm spaceing, so your on the right track. I know when I listen to 5wpm and 5wpm spacing, my mind can wander.

EUREKA! We just hit on how to have a dramatic increase in the number of new CW proficient Amateurs!!! I'll leave the details to the participants, but I expect some level of decorum, at least until the post test celebrations. ;^)

Okay, what about risky behaviors such as bungee jumping, climbing Mount Everest, an activity where if the last newscast I heard is accurate, has about a 10% rate of people who never come back? What about overeating, the obesely fat are probably worse off than smokers as for early mortality. What about old farts like me who participate in sports where we get hurt (in the past five years, I've broken an ankle and torn an ACL playing hockey. Should we be punished for engaging in these (according to some people) foolish behaviors? Should I be denied insurance because of my playing sports.

While I can appreciate your view, in the end it won't work. Who decides who can do what? There are some who would deny access to an auto upon taking antihistamines, or even if a person has a cold.

This is why we don't have laws like this. It would eventually turn into not having any control over our lives because someone has decided that they must protect us from ouselves.

Right, and of course all are good and useful auxiliary combinations
assets. My point is that Len, *playing* at his role as the crusty
communications know-it-all, had earlier summarily denied that any need
for such auxiliary assets exists. Of course when he learned that they
had long been in place and are much used, he had to alter his scheme to
"already include" them.

Well, obviously, Ed. If we were broadcasters, and people were messing around with our broadcast frequencies, we'd be fussing about that just as hard. But we're not broadcasters, so instead we talk about the frequencies that we can use - the ham frequencies for licensed operators and the CB frequencies for everyone.

By the way, the "everyone" in that last sentence is also supposed to include ham operators, not just the troublemakers and illegals which dominate the CB frequencies now. Therefore, what happens on those CB frequencies is certainly a legitimate topic for ham operators to discuss.

Exactly what I have said here many times. For some reason that is ignored by those posting here who insist that I and others "constantly criticise CB". The part of CB that is legitimate is not subject to criticism. Unfortunately that is a smallpart of it. Even many users who consider themselves 'legal' routinely prove otherwise. Seems if they stay within to the original 40 channels they think that's enough, foul language and linears are OK.

We all know that CB has long been the primary source of new hams, and most of us accepted that lots of them had been illegal operators, and even out ob band operators. Some had no idea that they were committing an offense which could have serious repecussions. To those people, who drop all that in favor of ham radio, even while keeping active in 40 channel legal CB, I have no prpoblem whatever with it. Holding dual roles as a ham and a flagrant freebander is another matter.

> What goes on under Part 95 is not an ARRL concern, IMHO. But those that operate freeband are operating outside of Part 95, so, IMHO, they are fair game. And some of those weeds are spilling out of the garden and into mine and that IS Amateur Radio's concern.
>

Ok, Ed...let's run with this for a moment. I too feel that the league has NO business involving itself with "NON-amateur" frequencies, but for the moment let's say I agree with your assertion.

> It is my opinion that this problem will persist as long as illegally modified "export" radios are freely available and amplifiers are openly advertised on web pages and truck stops. To that end, I hope that ARRL does try to bring some pressure on the FCC to deal with the illegal equipment. It is affecting Amateur Radio and it will continue to do so until it is stopped.
>

I've NEVER placed the blame on the rig. It lies squarely on the shoulders of the operator..."Personal Responsibility" is what I believe I've heard it described as. Like I said, for the purposes of this comment, I'll go along with this too. When The ARRL involved itself with the legal efforts of legal CBers, it missed a valuable opportunity to gain an ally in the "war" against "export" rig availability. (Not to mention a host of other 11 meter related illegal activities, i.e. amplifiers, RFI/TVI, etc.) RM-9807 was NOT the efforts of "freebanders" to get the league to "represent" them. It was a legitimate proposal to "decriminalize" an activity that naturally occurs on CB. If The ARRL had NOT stuck it's nose in RM-9807, perhaps the 11 meter community, as a whole, (yes, "freebanders" included now) would have been more receptive to trying to resolve this amicably. Then we might enjoy a large contingent of CBers and EX-"freebanders" who would then actually be pulling on our side of the rope to help curtail the activities of the more egregious offenders. The alternative is to just keep reciting the FCC Part 95/97 rules and experience the same apathy that has been with us for over thirty years now. The league kind of shot itself in the foot and the wound, while barely evident at the moment, will only get worse as ex- (and current) 11 meter ops become hams, league members, and more politically savvy...especially since they are now aware of who's "paying the bills." It's a concept and a half. Then again we could just say that this is "NOT" happening and there's nothing to worry about? I personally feel it is happening and I am worried about it. Now is the time that we can possibly compromise and meet "somewhere in the middle." I don't want to observe another thirty years of this nonsense.

> 73,
> Ed Hare, W1RFI

Best regards to you also, Ed
Bert
KC2HMN

P.S. As a league member, I'm none-too-pleased that even so much as a penny of my dues went to pay for ANY labor involved in opposing a legitimate rule making proposal that would've been shot down by ITU treaty agreement anyway. I can say this because I'm aware that as a member, I vote, and I too...help "pay the bills" in Newington, CT. Let's clean up our garden first please. Then we'll worry about the neighbors. More neighborly disputes have been solved with a freshly baked apple pie than with a call to the local gendarmes. Food for thought, nothing more.

No, when you hate someone, learn to deal with it, if not forgive them
entirely.  THAT is the universal answer.  Capital punishment is merely a
measure to stop the atrocities of those that are unable to understand the
answer.  It is 100% effective.

Just having an axe to grind does not mean that you should bury it in
someone's head.

SActually, shame shouldn't be capitalized and you need an apostrophe for the word don't. AND you should always end a sentence with the appropriate punctuation mark. In this case either an exclamation point or a period. Just thought you'd like to know that.

BTW .. almost a happy birthday there
from one old dude to another..I guess!?!

The principle is that a person's body belongs to that person, not to you or the government.

> >An adult has a perfect right to ingest whatever he/she chooses.
>
> Thankfully, at this particular moment, that is not true.

Lots of things that are rights are against the law. Blacks using white restrooms in Texas in the 50s, for instance. The drug laws are evil laws, just like racist laws and sexist laws. We should wake up and treat drug problems as social problems, not as crimes.

> If that "silly law" at least deters a potential DUI from driving into my
> family, then I could care less that it impedes someone's partying.

Driving has absolutely nothing to do with using drugs. Alcohol is legal to consume but *DRIVING* under the influence is illegal. DUI *should be* illegal. Simply smoking marijuana in the privacy of one's home is no worse than consuming alcohol in the privacy of one's home and is a lot healthier.

> There are laws regulating the use of motor vehicles and penalties for NOT
> using it responsibly in every State of the Union. Why should it be any
> different for substances that can altr human behaviour ...

Because motor vehicles are life-and-death situations, Steve. Smoking a joint in the privacy of one's own home is certainly not. A drunk just ran over a jogging couple in Brian, TX. Does the fact that it was alcohol to blame rather than marijuana somehow make it more acceptable? The wife is just as dead either way.

Personally speaking, I would say that code testing is more likely to be removed than retained if and when S25.5 is changed to remove the code test. That's only a personal suppostion.

In opposition is the long-timer PCTA amateur community who wish to mount form-letter campaigns to the FCC. See the "WAD" proposals which came some time after the Comment cutoff date on 98-143. Those individuals are likely to be around after the next WRC.

The pessimistic view is that the FCC's International Bureau hasn't yet done anything on establishing a position on S25 en toto. [see the FCC IB WRC page] Only the NTIA has made itself known in a draft letter. Since the US administration hasn't yet made any views known as a group no one can be sure of where they stand. It may very well be that S25.5 will never be changed at the WRC.

Why is that odd?

>>In order to "care about amateur radio" one has to be in it
>>via licensing.
>
>Then you obviously don't care about amateur radio, Len. Why do you post here?

Flawed premise.

Miccolis attempts mind-reading, not a normal human attribute.

Amateur radio should be a fun hobby in this new millenium.
Problem is that so many long-timers insist on "standards and
practices" in that avocation to be like they were in the 1930s
and 1940s, perhaps in the 1950s. Such steadfast, hold-to-the-
old attitudes do not contribute to enjoyment or to seeking to
engage in such hobbies. Indeed, so many of the long-timers
insist on being a "radio cop" or using whatever patronizing
attitudes they choose to establish "turf" as if they "owned"
US amateur radio. The examples abound in this newsgroup.

Why does Miccolis post in this newsgroup?

Miccolis already has an Amateur Extra and, if renewals are
made in the regulatory time periods, will never have to take
another amateur radio test in his life.

Why does Miccolis argue the subject of entrance into amateur radio? Miccolis entered a long time ago, almost in another era of the life of all radio. [all radio reached mid-life in 1948]

>You obviously don't care enough to be licensed, even though you told us, on
>January 19, 2000 that you were going for Extra "right out of the box".

Miccolis practices selective editing. He omitted the conditional "IF" on my statement and then tried to cast some emotional pejorative about "caring." [IF I wanted an amateur radio license I would go for the "maximum" but have worked up some great desire and "caring" to bother to take a test]

Must one "care" about amateur radio to a great extent? If so, why?

The FCC requires testing for issuance of amateur radio licenses as part of its US civil radio regulation task. The FCC does not require some "caring" as a necessary part of amateur licensing. The "care" aspect is an artificiality, an emotional attribute tacked on by those who seem to have too great an emotional attachment to amateur radio. Amateur radio is not a life style. It is just a hobby.

Some in amateur radio seem to have truly adopted amateur radio as a life style, complete with a judgemental ethical-moral viewpoint that they are "superior" human beings by virtue of having passed a test and been granted an amateur radio license. For a few highly over-judgemental types such a license is "superior" to a much more comprehensive commercial test or even many decades of experience in commercial or military radio.

To use the word "care" in a colloquial manner, I do not much care to be held in some "novice" or "apprenticeship" category by a number of long-timers who have neither overall radio experience tenure nor the demonstrated knowledge of radio theory. Yet those same arrogant, patronizing judgemental individuals insist that amateur radio is somehow "different" than other radio, therefore there "must" be an apprenticeship period with all newcomers subservient to them.

The necessity for subservience is a personal attitude device with such individuals which is not part of the traditions of amateur radio (as published) nor of the US civil radio regulations. They assume a "ruling" mantle which was never earned by any test nor of amateur experience; it is simply a psychological flaw of a need for dominance or of "officiality," all to make themselves appear "more superior" to others. In reality, such "superiority" is within their own heads as others observe them differently.

There are a few too many in US amateur radio who daily demonstrate such aberrant traits in here. That is not a welcome to newcomers nor is it an inducement for professionals to join their exhalted ranks.

>bands. None at all.

Heh. A newsgroup fly-specky technicality on OOK CW,
except I did not say that the exclusivity was about CW..

Anyone can look at FCC mode, modulation, and license
class allocations that favor the Amateur Extra.

>How do you know how much of each mode is used on those bands, Len?

That is an extremely easy task on HF and below. One
obtains a receiver and puts up an antenna, turns on the
receiver, tunes around and listens. :-)

It is NOT necessary to understand each transmission heard.
All are identifiable, including OOK CW.

>>This exclusivity
>>came about by man-made regulation changes, not divine
>>intervention. The exclusivity "necessity" (as it is viewed by some

>What is YOUR suggestion, Len? No subbands?

Haven't you been reading at all? "No sub-bands" is what I wrote
years ago in here.

>>One of the rather obvious problems with exclusivity through code
>>skills is the class discrimination of the code skilled as "superior"
>>to others in the hobby.
>
>It's a service, Len.

The word "service" used throughout Title 47 CFR is a regulatory
term denoting the type and kind of radio activity covered in a
particular Part. Phil Kane has agreed with that. Why can't
you? Are you superior to Phil Kane?

>And the possession of skills and knowledge of any relevant
>sort does make one "superior" in a way.

Elastomeric fly-specking. [...a great deal of point-stretching]

It is quite obvious in this newsgroup that PCTAs consider
themselves superior to mere mortals that cannot do code as
fast or as good as they. They use that as some kind of
rationale that morse code skill overcomes any need to know
theory or that it is "better" than radio theory knowledge.

> Do you advocate some sort of classless collective society?

No, clueless clyde, I consider that remark contemptuous and
not at all in the discuss-debate spirit.

>> Class discrimination has created the
>>artificial barrier which has morse-code-on-HF as the ultimate
>>attainment in amateurism on one side and radio-as-a-general-
>>hobby-activity on the other side.
>
>What is your solution, Len? Do away with licenses and tests?

Why does Miccolis insist on a "solution?!?" Is it because of
his position on the "good" side of the barrier?

My advocacy has always been the elimination of the morse
code test for any amateur radio license test. I have written
that before and possibly must continue to do so for those who
troll for arguments and flame-war ignitions.

Why does Miccolis insist on joining Element 1 with the other
three test elements? They are separate. Removal of Element
1 does not automatically remove Elements 2 through 4.

>> Newcomers have long since
>>changed from entering US amateur radio as code-tested

>>Novices to the no-code-test Technician class. It took some
>>time for the ARRL to recognize this, but they finally recognized
>>it.
>
>Your history is flawed, Len.

Miccolis observation is faulty and erroneous. My observation lies in the already-published periodicals and books of the ARRL. Miccolis cannot change that for all his need to make flame-ignition personal comments.

>Long before the 1991 removal of the code test from the Technician class, the
>trend for new hams to start out with licenses other than Novice was going
>strong.

Define and quantify "strong." Miccolis has not. Let's look at the NEW license tabulations on Joe Speroni's amateur radio pages. Between the end of May 2000 and the end of May 2001, the NEW licensees per class are:

Extra	231	
Advanced	3	
General	1150	
Tech+	51	
Novice	24	
Tech	20,480	<- (93.35%)
Total	21,939	

I have pointed this sort of thing for 2000, 1999, 1998, and 1997. The increase in the no-code Technician class license has been roughly 20,000 per year new licensees for all 11 years of that class' existance. Of all new licensees, during the entire history of the no-code-test Technician existance, the no-code-test Tech has far outnumbered all other classes combined.

The number of excuses and rationales presented by PCTAs could fill a book...but no library would bother stocking such a book. Miccolis has given one following -

>Removing the code test from the Technician in 1991 made it the easiest
>license
>to get, and it's no wonder that most new hams after that time got started
>with the Tech or Tech Plus.

Miccolis omits the Novice class license which existed prior to April 15, 2000. The Novice class test was THE easiest of all six classes existing prior to restructuring...even so, the numbers of Novices had been steadily decreasing for at least four years prior to that and the number of new novice licensees were few in comparison to their expirations.

>>The ARRL took even longer to recognize that code skills are
>>not the ultimate achievment in amateur radio but they have not
>>yet moved enough to recognize the majority view of US radio
>>amateurs.
>
>What view is that, Len? And how do you know that it's the majority view?

I wrote "ARRL," specifically the Amateur Radio Relay League.

Does Miccolis consider the ARRL to hold a majority view of US
amateur radio? If so, why? The membership of the ARRL is
still less than a quarter of all licensed US radio amateurs.

>Sems to me that you're projecting your biases and prejudices upon others,
>now.

I am not projecting MY views on the ARRL. :-)

On the other hand, as an ardent PCTA, Miccolis seems to be
trying to foist off HIS biases and prejudices on the majority of
the US amateur radio community...and everyone else. Why is
that?

>>interference mitigation through a common communications mode.

>
>That is only one reason - back in 1912. There are many others that have
>evolved since the first licensing of amateur radio operators.

Not really. Thos -unnamed- "evolved" reasons are simply rationales to perpetuate the morse code hazing test ritual upon all newcomers. All of them have been proven incorrect but the PCTAs persist in carrying on the clear Urban Myth of morse code testing "necessity" because they have no valid argument against the code test removal.

>>Since there is a dearth of morse code use as communications in all
>>radio services except amateur and maritime, it is no longer logical
>>for the federal governments to require any morse code skill in a
>>license test.
>
>That's true ONLY if the only purpose is to prevent inter-service
>interference. There are lots of other reasons for the test.

None of those "other reasons" are valid. They have been disproven time and time again. S25 did not exist in 1912, the ITU-R did not exist in 1912, and the CCITT was barely begun as an international body attempting to standardize communications methods. Indeed, the ONLY way to communicate by "spark" radio was by on-off keying. In 1912 the teleprinter had begun displacing landline manual telegraphy and the days of landline manual telegraphy were waning. The new communications method of radio attracted many landline manual telegraphers who were either downsized out of a job or about to become jobless. The radio of per-WW1 days was a godsend to these manual telegraphers and they made the most of it with a group of new myths and legends. Aided by the rescue-via-radiotelegraph-communications of the Titanic passenger survivors, the myths and legends were cemented into place.

As the "sparkies" and radio telegraphers retired after the WW1 times, many took up the hobby of amateur radio. At that time amateur radio was almost exclusively OOK CW, even with the new radio circuit components called vacuum tubes. The myths and legends of commercial and military OOK CW came with these amateurs and they fostered almost an "obedience" to strict protocol and operating methods. The excuse for such rigidity in standards and practices was simply "it is good practice" without showing the background that lay in commercial and military radiotelegraphy. Those few who dared go farther than a four word descriptor started saying that amateur radio offers a "pool of trained radio opeators" for defense of the nation. In some ways, that rationale, which included morse code skills, had some merit in the 1930s.

By 1940 and the dark days of the USA prior to their forced entry into a truly world war, radio technology had already advanced. Radar existed although kept under secrecy and the teleprinter was used for high-level communications rather than manual telegraphy (encryption devices could be coupled to teleprinters directly for on-line encryption and decryption). Radio broadcasting of voice and music was commonplace and voice communications was being tried out for public safety communications. Radio amateurs were still holding up morse code skills as the epitome of radio communications.

An explosion of electronics technology advances during WW2 brought about the beginning of using spectrum above 30 MHz for communications by land radio services, the proliferation of teleprinter telegraphy, radio facsimile, direct frequency control by quartz crystals along with the manufacturing of man-made quartz in pure crystalline form, real-time televison, multichannel microwave radio relay, FM in wide use for mobile radio. Single sideband communications on HF had already been done by commercial and military radio in the early 1930s. Information Theory had begun forming, aided by the seminal 1947 paper by Claude E. Shannon (deceased February 2001). Amateur radio still clung to CW skills as the epitome of radio communications.

Twenty years later in the mid-1960s, the transistor and then the integrated circuit had entered the design of electronics and radio. The first frequency syntesizers appeared allowing direct, multi-frequency selectable frequency steps of 100 then 10 Hz increments. Single-channel SSB voice had been adopted and adapted to amateur radio on HF. Single-channel FM voice was found desireable on VHF and UHF amateur radio bands. The first modems had appeared for landline use, then adapted for radio. Both slow-scan and fast-scan television was being tried out on higher amateur radio bands. Moonbounce communications was being tried after the first demonstration of lunar reflectivity by the US Army Signal Corps just after WW2. Microwave radio relay of thousands of voice channels, dozens of TV channels was now an integral part of US communications infrastructure. Orbital radio relay satellite placement had begun. Information Theory was now an established science and the compression of redundant data had begun, the only argument over such being the type of compression, not its possibility. VHF and UHF repeaters had been established and coordination begun. Mainframe computers had reached clock rates of 10 MHz with 50 MB mass storage capability. Radio amateurs still considered morse code skills as paramount in radio communications.

In twenty more years, by the mid-1980s, the personal computer had started becoming a household fixture with clock speeds of 40 MHz and 250 MB mass storage for high-end PCs. 60-channel cable TV distributed to every home was an accomplished fact. Orbital communications satellites were there and working, tying the world together by microwaves. Microwave ovens, standardized at 2.4 GHz, were becoming a standard fixture in kitchens and offices. Various forms of networking and packet radio existed, amateurs now beginning to use video terminals and high-speed paper printers replacing the old electromechanical teleprinters. Government and utility company radio was now firmly in place with VHF and UHF FM voice equipment, mobile and hand-held sets

being more numerous than those in use by radio amateurs.
The integrated circuit and the application-specific IC were now available in almost any grouping and function for new equipment. Moonbounce, jargonized as "EME" was now a regular activity by some amateurs...still, amateurs were told by publications and organizations that the epitome of radio communications was by OOK CW on HF.

At the start of the new millenium the average ham shack contains at least one foreign-designed-and-made HF transceiver with precise 10 Hertz incremental selection and precise stability. The circuitry of the average transceiver, including that of the larger QRP units, contains at least one microcontroller used for a number of different functions. There are commercially-designed-and-made radios for all amateur bands from 160m to 23cm, base-station and hand-held. A personal computer of 600 MHz clock rate and 20 GB mass-storage, internal 56K modem and sound card plus a color CRT and inkjet printer and high-resolution image scanner can be purchased off-the-shelf at Wal-Mart and other chain stores for under $1500 (H-P). A few foreign-designed-and-made HF transceivers are directly-controllable by such computers and several data modes, including PSK31, can be modulated and demodulated by such PCs. Antenna designs may now be analyzed by PCs using any of three available, low-cost program packages. Circuit analysis by PC is an established fact by at least a dozen program packages...some including automatic printed-circuit board layout and mask printing along with schematic diagram drawing. HF communications path analysis and contact logging packages for PCs exist by the dozens. Automatic antenna tuners using microprocessor control are available to take the drudgery out of QSYs and tuning up different, switchable antennas. There are even automatic, microcontroller-enabled antenna analyzers that present the complex impedance or admittance of antennas at selected frequencies. The Internet exists worldwide for setting up contact schedules and for the verification of radio contacts plus the web is a storehouse of information on theory, components, and component sellers.

>>Morse code skills are highly prized by a number of long-tenured
>>radio amateurs.
>
>Morse code skills are highly prized by a large number radio amateurs, of all
>"tenures".

Of course. Morse code skill is the epitome of all radio communications, isn't it? :-)

I have my own paper-printed copy of the 1964 National Radio 50th
Anniversary booklet. Nice nostalgia item. Did you get a thrill
out of the National "Thrill Box?" [really was a trade name]   :-)

"Acorn" tubes were cute things but they were of an earlier era
than Kelly could experience. In late 1953 I was working with
829s (that's a VHF dual tetrode) and then 2C39As in 1955 (a
very high transconductance "lighthouse" triode used by GE in
a 1950 microwave radio relay system).

>Then in 1959 came the RCA UHF Nuvistors . . I'm sure you know all
>about those Lenny and the noise figures they had at 500 mHz? Which
>wound up in any number of QST UHF gear construction articles.

The RCA Nuvistor was a last-ditch grab at the tube market when
the solid-state era had begun. The Nuvistor was a bust and became
cheap on the market. My first garage-door opener receiver had a
Nuvistor. Kelly should lionize a certain planar triode for 1.6 GHz...
only about 12 or so million were made for the radiosonde market
for a dozen years plus. [I keep thinking of the GE 6442 but that
was a triode used by MRI on a TACAN/DME test set...can't recall
the part number]

Do you want some stuff on REALLY low NFs? Gotta go solid-state,
senior. Or do the MASER thing. Vacuum state with gms at around
16 millimhos gets way too expensive and too short-lived due to that
pesky filament.

>There was life beyond transpacific HF Army RTTY boxes in the 50s Lenny

>but you obviously have never managed to get past that box. You've
>never recoverd from yer days in the joints in the Ginza.
>>
>Good luck with that one now.

Ooooo...Kelly is getting all flustered and angry there. :-)

Too bad Kelly didn't get to operate a 4 KW PEP SSB Xmtr made
by WE...or a 40 KW linear amplifier made by Collins Radio. Tsk,
tsk, tsk. How about an ancient BC-339 1 KW transmitter (CW,
FSK) or a BC-340 10 KW jobbie or a Press Wireless 15 KW rig?

Oh, you don't like the old days? OK, how about a ##### ## #####
VLF rig in the 60s (sorry, might still be classified unit) or the
SINCGARS family in the 1990s? Fully-synthesized military
transceivers of the 1980s? Ku-band radar checkout sets in the
1960s? "McNamary Wall" SIDs on VHF during the 1970s?
Low L-Band RF sections for the RCA SECANT and RIHANS
position-location R&D of the 1970s?

Actually, I only went to the music bars ON the Ginza in Tokyo.
There were other places to hang out in that large city. :-)

>In 1959 I was 22 years old and working at the Sun Oil Applied Physics
>Laboratory during my engineering co-op stints and had two bench techs
>assigned to my loving care. I wish to hell you had been one of 'em.

Why? So you could have someone to vent frustration on? :-)

I'll just bet you were doing lots of electronics and radio stuff, yes?
In 1959 I was checking out travelling-wave tubes used in the
Quail decoy air-breathing missle (wideband mixer application,
roughly five octaves bandwidth in low microwaves) or (not knowing
it at the time, finding out later) working on the U-2 ground support
equipment at end of that same year. That was at Ramo
Wooldridge. In that year STL was really just a lab within R-W,
would later become the start of TRW and spin off Aerospace
Corporation.

>That's right, I didn't come into it polluted by any Old Fart

>>page. It will tell you what form and format the FCC wants.
>>
>Their technological backwardness is not my problem, they can take it,
>leave it, or supply the tape deck.

You can buy a fairly good tape cassette deck at Wal-Mart for under $40. That should be a small price to pay as self-proclaimed savior of the HF airwaves. Has its own microphone so you won't have to "engineer" an audio hook-up to your receiving thingy.   :-)

However, see Phil Kane's message on rules of evidence. Not only is that correct but is also common sense.

>>Kelly has a choice. Report infractions and crow about it or
>>button it up and whine, whine, whine.
>>
>Don't take another breath until I get around to doing any of the above

Breathing is normal here and should continue...in between paroxyms of laughter at some of the postings... :-).

>>Oh, and good luck on "biasing" those 5U4s now.   :-)

By the way, I can make a dual-diode be PART of an amplifier. Trouble is, it would be at audio and involve a lot of magnetic stuff. [whole thing called a "magamp"]   :-)

 Phil I know you're serious, and rightly so, but I'm afraid that the
miniscule influence of pirate BC pales to the point of disappearance
compared to the outright outlawry routinely played out, with impunity
and with the FCC's back turned, on 27 mHz. By far that is and long has
been the source of almost all the negative influence on ham radio.
 I remember the days before CB was begun, and there was NO profanity nor
illegal operation by comparison. The volume of sheer illegality
routinely gotten away with on 27 mHz showed the way.

And you've ignored my point - those problems will increase if drugs are legalized (see my previous message for why this will happen).

> So what are you going to do when the

I'm going to do what most people do - resist police abuse where I find it. Whatever the case, eliminating laws (drug legalization) is not the solution to these problems. The solution is to keep the police under control. For example, I'm personally opposed to the RICO laws (as they exist now), but that opposition has no effect on my views about the drug laws. Since all that is so obvious, all you're doing is using these problems to distract from the illegal drug issue (and the real problems associated with that).

Why don't you repeat your assertion that CW is the best mode ever,
you know, most efficient, most reliable, etc. Putting Morse code
on such a pedistal that it requires a special exam seems to me to be
the same thing as feeling it to be sacred. It's just another mode with
a certain set of characteristics, Larry, it's nothing supernatural.

That doesn't logically follow at all, Dick. Prohibition was immoral.
That doesn't make free, unrestricted use of alcohol moral.

Ed:

I don't recall ever stating that you were "officially appointed" as an
ARRL spokesman. It is my personal belief that your status as an
ARRL HQ staff employee in a management position cannot be
separated from your participation in THIS newsgroup -- or any other
newsgroup you may participate in, when making comments
relating to amateur radio policy. If I were your employer, and found
you *not* towing the "company line" when making postings in a
public forum, you'd have one heck of a lot of explaining to do! As
the ancient Chinese saying goes, "A wise man does not (deficate)
in his own rice bowl." I have no doubt that you are a wise man.

>The fact that they have me
>post ONLY on rrap and a few QRP reflectors should tell you that they think
>that rrap is the most important venue in Amateur Radio. :-)

If I believed that for a second, I'd immediately cancel my ARRL membership,
in order not to be associated with a bunch of fools!

Ed:

We'll have to agree to disagree, then. How's that for "attitude?"

>As I said before, I couldn't imagine a certain
>well-known
>NCTA who no longer posts here being hired by ARRL. As I said before, a fellow
>like N2EY would probably succeed quite well at ARRL HQ. Jim and I disagree

>the technical qualifications that are needed.

Ed, I have no inclination to EVER work at ARRL HQ -- never had, never will. It's just not something that ever entered my consciousness as a career possibility. I don't have anything near the technical qualifications to fill any position there that I'd be interested in having. I am purely an AMATEUR Amateur Radio Operator; my opinion of HQ staffers is that they, for the most part, have technical qualifications far beyond those required of a pure hobbyist. And that is no more or less than how it should be. The "dream career" for me has always been as an Airline pilot, but poor eyesight stole that dream from me at an early age. I have had to substitute it with a career in Air Transportation, which at least had me involved in aviation in a manner in which I could make a worthy contribution. As my military career progressed, I became an expert in surface modes of transportation as well, and held numerous supervisory and management positions in Aerial Port and Transportation units. I now work for the local transit authority as a Paratransit Specialist, and I work "hands on" providing specialized transportation for people with physical and mental challenges. I thoroughly enjoy my job, and plan to work my way up through the ranks in my second career as far as I can go. Employment at ARRL HQ is not on my radar screen, whatsoever. Regardless of your perception of what kind of a potential ARRL HQ staff employee I would be, your opinion in that regard is completely gratuitous.

>>On my second visit, I just operated W1AW, and kept

>
>Odd. Most people I have met that have visited HQ came away with a more
>positive
>impression. Maybe they approached it with a good attitude. :-)

When I "approached" ARRL HQ that first time, my "attitude" was one
of eager anticipation of one of the most fabulous experiences one could
possibly have as a radio amateur. I fully anticipated being treated like
a fellow ham who invested the time and expense to travel to ham
radio's "Mecca." The reality of my cold, impersonal greeting had the
same effect as a bucket of ice water perched above the door, waiting for
me to enter. If subsequent visitors are having a much better than my
own, all I can say as a member in good standing is that they'd damn
well *better* be!

>How about it -- anyone else visit HQ and want to share your impressions of
>the visit?

I will be interested to see other people's stories as well. And if there is
even a *single* negative story similar to my own, I would expect you
to take personal action to ensure that such a thing cannot happen in the
future!

In article <9galj5$j8l$0@208.207.71.161>, Dick Carroll <dixie@townsqr.com>
writes:

>> Capital Punishment just gives the victims a chance to "get even" by taking their own turn at killing another fellow human being. Anyone with a scintilla of humanity in them would be appalled.

> You're as wrong as you can be, Larry. Taking out a subhumanoid predator is not the same as killing a human. Most of these "people" are not people at all, they just look like it. Some of them kill just for kicks, and will do it any time the opportunity arises.

Dick:

The technology exists to safely and humanely incarcerate these people for their natural lifetimes, without any further danger to society as long as they ARE kept locked up. If our "system" is dumb enough to let them go, for whatever reason, then we need to address THAT issue, and not substitute reason with state-sponsored murder.

> When you closely examine individual death penalty cases you find that juries and judges don't mete it out wantonly. When it is handed down it is because it is apprppriate. Far more life sentences are passed for murders than death penalties, because of the curcumstances. Examine the backgrounds of those who get a death sentence and you see reality. Pretty it isn't, reality at work, yes.

I have no doubt that death sentences are given out only in the most egregious cases of capital murder. I'm sure that in a lot of those cases, the subjects are vicious, unrepentant killers like Mc Veigh. Unfortunately, this does not give a modern, progressive society like ours an excuse to engage in Medieval punitive practices. No matter how painless and efficient we make the process of extinguishing a convict's life, the plain truth is that we are defying any reasonable standard of advanced, decent societal comportment by doing so. I have no problem with a police officer using deadly force to prevent a criminal from injuring or killing an innocent victim, or with any law-abiding citizen to be able to do the same in order to protect his own home and family. But once the immediate danger of harm from a violent criminal is over, and that person is under physical control, there is no longer any possible justification for taking his life. We must even accept the small risk that he may take another life in order to permit him to live to face his lifelong punishment of banishment from society.

Unfortunately, I find myself in a position where I must mourn the death of Mc Veigh as the 169th victim of his terrible act. He lost his life before he was able to come to terms with what he had done, and before he had an opportunity to save his soul through remorse and repentance.
I can only hope that God, in his infinite mercy, will not consign his soul to eternal damnation, due to the fact that he wasn't given the time that he needed to repent. He should, of course, be the last one let out of Purgatory when the time comes!

Jim, nothing pleases me more that you and your XYL had a far different,
and much nicer, experience at ARRL than I did. I wouldn't wish what
happened to me on my worst enemy!

>>>>Jim:

Apparently not. Again, I'm pleased to hear that you were treated much
better than I was.

>I later had reason to work with Al Brogdon, K3KMO, on a QST article (somebody
>had to edit my stuff, and he got short straw). Great guy to work with, even

I had worked Al on HF CW many times while he was K3KMO (now W1AB).
I have his "Tuning the Band" QSL card. Nice chap. He had nothing to do
with ARRL HQ at the time of my visit, to my knowledge.

>>>But they sure were working hard doing good things for the ARS.

>away with a good understanding of the other side's position.

Fine, Jim, I'm truly pleased to hear this. Unfortunately for the ARRL, it
doesn't change anything about my first, and subsequent, impressions
of their attitude toward fellow hams. And, unfortunately, I've heard many
other hams relate stories that validate my own experience many more
times than I have heard positive comments such as yours. And I'm
not saying that a subsequent visit would have the same result -- in fact,
hopefully, some day I'll appear on ARRL HQ's doorstep asking if Ed
Hare can come out for a lobster dinner! However, my first impression
has been, as always, the most lasting, and I don't think I can forget it. A
positive experience in the future, one I haven't had yet, would go a long
way toward helping me to do so.

If you are really into preventing accidents, Steve, then you should
advocate the outlawing of vehicles.

> Paying for sexual favors shouldn't be illegal either, but is. There are
> the same "it doesn't hurt anyone" arguments there, too.

It is legal in some places. Why is it good in some places and bad in
other places? What about gambling, Steve? Do you think gambling should
be illegal?

> I am not the one punishing anyone, Cecil. But I support laws that
> criminalize illicit drugs and abuse of "legal" drugs, including alcohol.

Har, har, if they weren't criminalized then they wouldn't be illicit.
That's called begging the question, Steve.

Why do you want to know the reason? Are you going to forgive one

mugger and punish another one? That's ridiculous! So are the "hate crime" laws. Am I any more dead if I am killed by a racist than if I am killed by a robber?

I didn't ignore your point, I simply do not agree with it. There was a different set of problems under prohibition VS not under prohibition. I say the problems under prohibition were worse than the problems not under prohibition.

>   I'm going to do what most people do - resist police abuse where I

Of course it is, Dwight. It worked for alcohol.

Now Dick, I KNOW I'm not reading this correctly. Are you blaming ALL of the negative elements of amateur radio on the shoulders of those occupying approximately 550 kcs of "the megacycle above 27?" What a cop out!

Several states, Wisconsin for one cause I lived there, have handled 'life
without parole' for a lot of years.  WI hanged the wrong guy about 1852 and
has not done it since.  While it is something of a chicken and egg problem
the states without the death penalty in general have the lower murder rates.

I know that.

> Some of the more serious
> fellows run the AB-1 stuff on sideband. (Texas Star, Skywalker, etc.)

My brother who is a Ham used one of those with is 10m export rig for mobile operations for a while. Found out those "brands" are not exactly "clean" either. They are definitely better than the other junk, but they still needed external filters. He just got a new 706G at Dayton so he doesn't need the old 10m rig and amplifier any more.

Of course not. I have met a few good CB operators. The problem is the ones you see on the above web site gives every one a bad rap. I remember the time my brother was engaged in a QSO on 10m, and was using his Kenwood TL amplifier for DX, when some yo-yo interrupted right in the middle. This guy then proceeded to bitch about him interfering with him! This guy never gave a callsign, but my brother definitely did recognize the voice as belonging to a local CBer a mile or two away. He has had several problems with this guy, and one other, before. The reason why he knows this guy is my brother used to be a CBer too until about 3 or 4 years ago. He's now a General Class Ham.

I think the 910H is over priced for what you get. If you don't need 1.2GHz
you can spend the same amount of money on a Yaesu FT-847 which will give you
far more bang for the buck.

When I talked about "all CBers" being demonized, you said, "They did
it to themselves ..." What does that imply?

I hope I never said "all freebanders" but I do feel that many of them like
the thrill of it. I know one who has been busted twice by the local FCC
office, and he still tries to operate by doing so mobile only. He thinks
he's playing a game with the FCC, "I dare you to catch me again", attitude.
Particularly when he talks about the FCC field engineer trying to follow him
around. Go figure. Several of us Hams keep offering to help him get his Ham
ticket, but nope, he likes what he's doing. I'm sure there are many more
like him out there. How many there are I would agree is anybody's guess.

>Why? Chemically, they are similar.

"Similar" in chemistry is NOT the same. Take H2O and add an extra oxygen atom and you change water to Hydrogen Peroxide. The Germans used it as rocket fuel oxidizer in stronger concentrations.

Want a glassful of that "straght up" or "on the rocks", Cecil...?!?!

Why not...?!?! They are "simialr"...!!!

Maybe not directly, however Mafia Don's have "run" thier "businesses" from inside prison....I see no reason why McVeigh and his ilk couldn't plan other bombings with him "inside".

Unfortunately, McVeigh set himself up as a martyr for his twisted cause. Imagine what might have happened had he been kept alive and allowed to communicate with others.

And before you remind me that the parameter set was "solitary confinement", I remind YOU that despite the occassional use of the death penalty, the United States remains more liberal than not, and it wouldn't be long before "exceptions" would be made for him by such groups as the ACLU and other "rights" organizations.

Paradoxically, Larry wizhes to depend on technology to solve problems that are wholly human in nature. Technology is poor at providing 100% solutions to human problems. Any life sentence is subject to society's ability to contain the subject for life. Any flaw in that scenario causes it to break down, allowing the prisoner to go free and repeat, which is exactly what happens all too often.

Interesting...NOT likely. Wayne Green perceived such an occassion during the "Class E" CB fiasco. Never happened...Not even remotely.

Call it what you wll. I'm saying that before CB got taken over by the
lawless element there were very few such problems on the ham bands. Once
the FCC showed that it was going to just ignore profanity and all the
other illegal operation that they outlaws started up on 27 mHz, the same
sort of problems began to appear in significant quantity on the ham
bands. If you choose to reject this fact, that's your copout, not mine.
I was there watching and listening.

You know where I spent my working career, and I can't begin to recall all the cases I came across where a convicted murderer was eventually freed and did it all over again. I do remember a few specific cases clearly.

I guess when one is very familiar with the reality of this sort of sitiatuon one views it differently than if he just reads the morning paper. I know that a high percentage of murderers are recidivists. Seems to take a specific sort of personality to do that sort of thing, as a general rule. Ted Bundy was just one of the very worst.

>The technology exists to safely and humanely incarcerate these people
>for their natural lifetimes, without any further danger to society as long as they ARE kept locked up.

(1) Thereby vicitmizing society as a whole...by paying to keep them alive to the tune of (depending on whose numbers you believe) $15K to $25K a year each...More for those of notoriety who require greater security.

(2) They never escape?

>If our "system" is dumb enough to let them

>go, for whatever reason, then we need to address THAT issue, and not
>substitute reason with state-sponsored murder.

Then how do we "address" the parents of yet ANOTHER dead child when we say "Well gee whiz Mr and Mrs America...we THOUGHT we had him locked up tight..."

>I have no doubt that death sentences are given out only in the most
>egregious cases of capital murder.

Then it shouldn't matter. Would you invite these creeps to dinner?

Would you invite them to move next door in the remote circumstance that they were paroled after a change of "policy"...?!?!

>I'm sure that in a lot of those cases,
>the subjects are vicious, unrepentant killers like Mc Veigh. Unfortunately,
>this does not give a modern, progressive society like ours an excuse to
>engage in Medieval punitive practices.

Sure it does.

>No matter how painless and
>efficient we make the process of extinguishing a convict's life, the plain
>truth is that we are defying any reasonable standard of advanced,
>decent societal comportment by doing so.

"Decent societal comportment..."...?!?!

LOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOL

McVeigh got it easy. He shudda been the guy with the dry sponge in the movie "The Green Mile".

>I have no problem with a
>police officer using deadly force to prevent a criminal from injuring or
>killing an innocent victim, or with any law-abiding citizen to be able to
>do the same in order to protect his own home and family.

But Larry...using your "Decent societal comportment" theory, we SHOULD use some other form of weapon. Firearms shouldn't be used, period, if we accept your premise. Of course, we KNOW who would have the weapons then.

>But once
>the immediate danger of harm from a violent criminal is over, and that
>person is under physical control, there is no longer any possible
>justification for taking his life.

As long as murderous scum like McVeigh are alive, they will be a danger, regardless of under whose roof they are at any given moment.

An irony that has not escaped me, however, is that some OTHER deranged idiot will pull off a copy cat "attack" next June 11th to "avenge" McVeigh. Other than further decimate our society, it will also give furhter creedence to those who advocate stonger government control over our lives and firearms ownership.

One of McVeigh's "beefs" was his perception of the government's attempt to curb weapons ownership. It will be ironically fitting that his act of terrorism will only potentiate those who wish to see it happen.

You can cease your manipulative BS anytime now, Cecil, you've been ID'd long ago at it. It simply means that to whatever extent that CBers have been demonized, they did it to themselves. Brian has said he has used Cb. I have said I have used Cb. We both know from experience what so many Cbers have done to "demonize"(your word) CB. You know it too, much as you avoid it.

Correlation is a strange thing, Dick. As the church membership goes up,
so does the prison population. Following your above logic, church
membership causes crime.

Moral: That there exists a correlation doesn't mean that there is a
causal relationship. You can also correlate the present day drug problems
with the lawlessness on CB. Did CBers cause the drug problems? You can also

correlate your age with the CB problems. Did your aging cause the problems
on CB?

The cumulative number of human beings in space correlates to the CB
problems. Did the astronauts cause the CB problems?

Good to see you change the subject from "all CBers" to "many CBers".
Try to be that truthful in the future.

I'm not an expert on cocaine but I believe that crack cocaine is just crystallized powered cocaine. I should have said "quite similar". The real-world reason that crack cocaine has higher penalties than powered cocaine is racism. The real reason that marijuana was made illegal in the Southwestern states was to try to control the citizens of Mexico.

I haven't changed my mind. The drug war is immoral.

> each case, the problems are more than we would want to deal with in
> this society.

The problems are already there in spades.

> In other words, it would not benefit society to increase
> the problems we already have by adding legalized marijuana to those problems.

Nothing could be worse than the present conditions where a guy who is going to pay cash for a motorcycle has his cash confiscated by the police who refuse to return it.

> Anyone who truly cares about this country, and it's people,
> would be appalled by the idea.

So what are you going to do when the police get the address wrong, break down your front door, and shoot you? (Like they did in Pasadena, TX). What are you going to do when the police frame you so they can seize your property under the RICO (sp?) laws like they did in CA?

How horribly remiss of me.  Here goes:

I hereby thank you, Ed, and everyone else who participates in this
newsgroup, for expressing your views about code-testing requirements --
whatever they may be.  I look forward to reading your comments on
this and other subjects in the future.  Please keep them coming!

Cecil:

I guess that's the difference between me and the people who make people who run Starbucks rich. I can't see the point of paying over $2.00 for ANY cup of coffee, or a buck for ANY pint of water. The only "spring water" I drink is that which is provided free of charge in my company's employee lounge. I occasionally buy a medium coffee at Mc Donald's, but that's only 89�, so it falls under the magic $1.00 figure. What the country really needs is a good one dollar gallon of gasoline!

Cecil:

I only hold sacred things that are deserving of being held sacred.  Nothing
about ham radio comes close to being sacred with me.  I hold things
like life, family, God, and country sacred.  The Morse code is something
I find useful and an essential skill for a radio amateur, but it isn't even
close to "sacred" in my book.  You really need to stop making such
outlandish pronouncements.

Unfortunately, that is the very same premise under which McViegh justified his attack, his "universal answer".

Mark.

Dick:

Well, DUH!!! To me, a "life" sentence means exactly that. The convict spends the rest of his natural life looking at concrete block walls and iron bars! The only way he gets out is to be taken to whatever burial place he is entitled to when he croaks from natural causes after a lifetime of spending 23 hours a day in a 6 x 8 cell. No parole, ever! I assure you, THAT was one punishment Mc Veigh never would have wished on himself -- yet we were so accommodating in making sure he didn't have it imposed upon him.

Capital Punishment just gives the victims a chance to "get even"
by taking their own turn at killing another fellow human being.
Anyone with a scintilla of humanity in them would be appalled.

>>>
>>>But not for the stances. For the way they were expressed.

No, the problem is "the stances." Liberal, politically-correct stances
expressed with the same "addy-tood" are accepted without question,
if not praised.

>>>As we say around here - "addy-tood"

Funny Jim should mention that. Early in my ham career, I made two
personal visits to ARRL HQ, in the Spring of '84 and '86, respectively.
Prior to arriving, I had expected a warm, friendly welcome extended
to a fellow amateur making his "pilgrimage" to ham radio "Mecca."
What I was greeted with was "addy-tood" all right! The "addy-tood"
was "Who the Hell are YOU and what the Hell are YOU doing HERE???"
I was barely able to get past the recptionist at the main HQ building
when I first got there; I spent an hour and a half browsing through the

Museum before I was met by a staffer for a perfunctory "tour." I
did get much better treatment from Chuck Bender at W1AW, and I
did get a full three hours of operating time which, of course, was my
whole purpose. However, the cold-as-death, bitter reception from
the HQ building really made a lifelong impression on me. Unfortunately,
I had heard virtually the exact same story come from other hams I'd
spoken to who had visited ARRL HQ before, and since my own
experiences. On my second visit, I just operated W1AW, and kept
my distance from the HQ Building, which seemed to have an
invisible "No Trespassing - Keep Out" sign posted on it.

>>Jim:
>>
>>ARRL HQ will have to receive a resume from me before they can
>>consign it to the circular file. I sure hope they aren't holding their
>>breath...
>
>Last time I was there, nobody was turning blue....;-)

I'm sure they aren't! I'm glad to hear that somewhere between arrogant,
cynical snarls made toward fellow hams, they manage to get a gulp of
air now and then!
>
>But they sure were working hard doing good things for the ARS.

I don't recall ever stating that they didn't. I'm not "anti-ARRL," just
permanently disenchanted with the personal treatment I'd received
from the HQ staff during my personal visits and in subsequent
meetings at Dayton, state Conventions, ARRL Forums, etc. I have
many more stories to tell along those lines, but don't wish to take
the time now.

>73 de Jim, N2EY

I wish I would have thought to take a photo of my own operation at
W1AW. Funny they didn't think of it.

No, it the attitude. As I said before, I couldn't imagine a certain well-known NCTA who no longer posts here being hired by ARRL. As I said before, a fellow like N2EY would probably succeed quite well at ARRL HQ. Jim and I disagree about code testing, as do I and at least one guy in the ARRL Lab. I could care less; the guys in the Lab are able to keep civil tongues in their head and have the technical qualifications that are needed.

>On my second visit, I just operated W1AW, and kept

Odd. Most people I have met that have visited HQ came away with a more positive impression. Maybe they approached it with a good attitude. :-)

How about it -- anyone else visit HQ and want to share your impressions of the visit?

Well, if I read what you want people to swallow, Larry, you offer that I am the officially appointed spokesperson for ARRL policy. The fact that they have me post ONLY on rrap and a few QRP reflectors should tell you that they think that rrap is the most important venue in Amateur Radio. :-)

Actually, Larry, the vast majority of test sessions have been fill-in the blank or 1-minute of solid copy all along. I have walked past a number of test sessions at various hamfests and didn't see the EMT or the defibrillator machine.

Ed, you are so right. Given any open minded person who only speaks
and thinks for themselves, clone them and put one into a leadership
position of a group and the clone and the orignal will without
a doubt disagree on many important issues. That is the nature
of the beast of leadership. It is the responsibity of the ARRL
BOD and staff to put aside their own views and adopt a policy
that is best for their members.

So go ahead and bash the ARRL. For me, I am a proud member
and plan on being for life. Do I agree with them all the time?
Of course not, but I don't agree with my wife all the time either,
but I don't have any plans to get rid of her. Mature people
understand they can't have their way all the time.

A lot of effort has been wasted on this subject of CW testing,
which could have been put to good uses. Why continue?
Why waste the bandwidth? Why narrow your mind on something
you can't change?

In article <3B2777AC.C9417202@psu.edu>, mjc5 <mjc5@psu.edu> writes:

>Okay, what about risky behaviors such as bungee jumping, climbing Mount
>Everest, an activity where if the last newscast I heard is accurate, has
>about a 10% rate of people who never come back?

Those risky behaviors usually only endanger those who voluntarily engage in
them.

>What about overeating,
>the obesely fat are probably worse off than smokers as for early
>mortality.

No, smoking is worse. Morbid obesity and smoking are even worse than either
```

alone.

But people have to eat to live. Nobody has to smoke tobacco in order to live.

>What about old farts like me who participate in sports where
>we get hurt (in the past five years, I've broken an ankle and torn an
>ACL playing hockey. Should we be punished for engaging in these
>(according to some people) foolish behaviors? Should I be denied
>insurance because of my playing sports.

Insurance companies charge higher rates for smokers and those who engage in risky occupations or recreational activities. Insurers figure out the various risk factors and charge accordingly.
>
>   While I can appreciate your view, in the end it won't work. Who decides
>who can do what?

It's a question of risk vs. benefit, and the consequences to third parties.

> There are some who would deny access to an auto upon
>taking antihistamines, or even if a person has a cold.

Why do you think so many antihistamines warn the user not to operate heavy machinery?
>
>   This is why we don't have laws like this. It would eventually turn into
>not having any control over our lives because someone has decided that
>they must protect us from ouselves.

What about protecting innocent people? The person who takes antihistamines which make him/her drowsy is a threat to the safety of others if he/she drives while impaired. That's the concern.

And one of the effects of many substances is to impair the judgement of those under their influence. Research has shown that drivers under the influence of alcohol consistently underrate how drunk they are, and consistently overrate how well they can drive.

>Alcohol impacts society. Why is alcohol legal?

Demand and pro-use subsidies from the distillers.

>Why was prohibition repealed?

Because enough politicians were threatened with thier careers if they DIDN'T vote for it.

>If you are part of the white upper class, you don't have to worry about drug laws.

I am part of the "white" middle class, I DON'T use drugs, and I DO have to worry about it. A person who doesn't "worry" about it, regardless of race, creed or socioeconomic standing is only fooling themself.

>Would you get off that kick? Driving and using drugs are unrelated
>except by real criminals. It is legal to consume alcohol. It is
>illegal to drive while DUI. That is exactly as it should be.

I don't consider preventing accidents and other social problems as "a kick", Cecil.

Paying for sexual favors shouldn't be illegal either, but is. There are the same "it doesn't hurt anyone" arguments there, too.

>I agree 100%, Steve. But please don't punish the 95% of the citizens
>who don't cause any problems while drinking or smoking.

I am not the one punishing anyone, Cecil. But I support laws that criminalize illicit drugs and abuse of "legal" drugs, including alcohol.

>Using exactly the same logic, gun dealers should be publicly executed.

If it's an illegal gunrunner, I agree. If it's a licensed dealer, you are out of luck.

>The last valid research was done by the mayor of NYC who wanted to
>prove that marijuana had bad side effects. He failed.

Perhaps because he doesn't have the credentials or the resources to do a valid study.

The American Medical Association does. They disagree with you.

Sorry.

I've found that to be true around here, too. The whole restructuring deal is a
nonissue away from rrap.

My paper on "The Past 50 Years of [US] Amateur Radio Licensing" has been
presented at a number of local club meetings. Always was warmly received - lots
of fun. Old timers had their "bad old days" stories to tell, and newer hams
were interested to hear how it used to be. But did anybody really care what
tests somebody took to get the class of license they had? Nope. Was there a lot
of concern about restructuring? Nope. Main concern was that the FCC would focus
more resources on enforcement.

>It is far from the most important issue facing Amateur Radio.
>
Agreed.

>I disagree.

You think it's the most important issue facing Amateur Radio? How odd.

>In order to "care about amateur radio" one has to be in it
>via licensing.

Then you obviously don't care about amateur radio, Len. Why do you post here?
You obviously don't care enough to be licensed, even though you told us, on
January 19, 2000 that you were going for Extra "right out of the box".

> In order to be licensed with below-30-MHz privileges,
>one has to pass a code test.
>
True - because of S25.5. And ONLY because of S25.5, according to the FCC.

For more than a decade, licensing for above-30 MHz-privileges has not required
a code test in the USA.

>Amateur radio coexists in the EM spectrum with other radio services.
>The original intent of the federally-required code test was to enable
>interference mitigation through a common communications mode.

That is only one reason - back in 1912. There are many others that have evolved
since the first licensing of amateur radio operators.

>Since there is a dearth of morse code use as communications in all
>radio services except amateur and maritime, it is no longer logical
>for the federal governments to require any morse code skill in a
>license test.

That's true ONLY if the only purpose is to prevent inter-service interference.
There are lots of other reasons for the test.
>
>Morse code skills are highly prized by a number of long-tenured

>radio amateurs.

Morse code skills are highly prized by a large number radio amateurs, of all "tenures".

>So much so that they are fearful of loss of their
>exclusive EM spectrum subdivisions in the HF bands.

There are NO exclusive Morse code subbands in the US HF/MF amateur radio bands. None at all.

>This
>exclusivity is demanded, almost (to some) as a "noble right"
>despite the greater use of data and telephony by other amateurs
>on HF bands as compared to OOK CW modes.

How do you know how much of each mode is used on those bands, Len?

>This exclusivity
>came about by man-made regulation changes, not divine
>intervention. The exclusivity "necessity" (as it is viewed by some
>of the long-tenured) is artificial, a benefit only for a minority.

What is YOUR suggestion, Len? No subbands?
>
>One of the rather obvious problems with exclusivity through code
>skills is the class discrimination of the code skilled as "superior"
>to others in the hobby.

It's a service, Len. And the possession of skills and knowledge of any relevant sort does make one "superior" in a way. Do you advocate some sort of classless collective society?

> Class discrimination has created the
>artificial barrier which has morse-code-on-HF as the ultimate
>attainment in amateurism on one side and radio-as-a-general-
>hobby-activity on the other side.

What is your solution, Len? Do away with licenses and tests?

> Newcomers have long since
>changed from entering US amateur radio as code-tested
>Novices to the no-code-test Technician class. It took some
>time for the ARRL to recognize this, but they finally recognized
>it.

Your history is flawed, Len.

The change occurred back in the late '70s and early '80s. When Technicians got Novice HF privileges in the late 1970s, the Novice began to decline as the first license of new hams. The reason for this was simple: It took only a little more written test study to get a Tech than a Novice, but the Tech carried a lot more privileges. And before March of 1987, a Tech could upgrade to General by passing 13 wpm code.

Long before the 1991 removal of the code test from the Technician class, the trend for new hams to start out with licenses other than Novice was going strong.

Removing the code test from the Technician in 1991 made it the easiest license to get, and it's no wonder that most new hams after that time got started with the Tech or Tech Plus.

>The ARRL took even longer to recognize that code skills are
>not the ultimate achievment in amateur radio but they have not
>yet moved enough to recognize the majority view of US radio
>amateurs.

What view is that, Len? And how do you know that it's the majority view?

Sems to me that you're projecting your biases and prejudices upon others, now.

And why not? Pirate BC doesn't have much effect if any on ham radio.
Sleazy CB and freebanders do.

>
> Well, DUH!!! To me, a "life" sentence means exactly that.

And that is exactly why it will not work in practice. If you kept track of even a small percentage of murder cases you'd see that a serious percentage are committed by people who had previously been sentenced to life in prison for a previous murder. Some multiple times.

There is no way that all who are sentenced to "life" will ever serve it. Too many liberal parole boatrd members are out there who can be too easily persuaded to release the poor reformed defendent. Only a few of those so sentenced will ever die behind bars, and most ot those are repeat offenders serving multiple life sentences. Lawmakers try to correct these problems by such things as "life without parole" sentences but somehow there are those who avoid even that. Too many different officials doint the same thing differently. People problems.

The
> convict spends the rest of his natural life looking at concrete block
> walls and iron bars!

Oh, you mean as opposed to taking illicit drugs while behind bars and spending his days relaxing and watching TV courtesy the ACLU?

The only way he gets out is to be taken to
> whatever burial place he is entitled to when he croaks from
> natural causes after a lifetime of spending 23 hours a day in a
> 6 x 8 cell. No parole, ever! I assure you, THAT was one
> punishment Mc Veigh never would have wished on himself -- yet
> we were so accommodating in making sure he didn't have it
> imposed upon him.

But it's pie in the sky, as so many such things are. Won't happen because it CAN'T happen. Our system just won't allow it. We have too many people with hearts that bleed for all the wrong reasons. It's great to feel empathy toward one of these "humans" when you know so little about his "humanity". Close examination makes it a wholly different story.

> Capital Punishment just gives the victims a chance to "get even"
> by taking their own turn at killing another fellow human being.
> Anyone with a scintilla of humanity in them would be appalled.

You're as wrong as you can be, Larry. Taking out a subhumanoid predator is not the same as killing a human. Most of these "people" are not people at all, they just look like it. Some of them kill just for kicks, and will do it any time the opportunity arises.

When you closely examine individual death penalty cases you find that juries and judges don't mete it out wantonly. When it is handed down it is because it is apprppriate. Far more life sentences are passed for murders than death penalties, because of the curcumstances. Examine the backgrounds of those who get a death sentence and you see reality. Pretty it isn't, reality at work, yes.

I had at one time a 2m antenna hidden outside until the coax cable got cut once. After that I did a better job hiding the cable. That's when the neighbor upstairs came done and wanted to know if I had a "CB Radio" in my apartment. Seems like she was hearing me on her TV. I assume she said something because she could no longer reach the cable to cut it. Nice people. I got lucky and they moved out some months back. Now I keep all of the antennas inside the apartment. I think I do most of my Hamming mobile now than anywhere else. Getting on H.F. at this location I think is just begging for trouble. It's bad enough I have my 6m loop hanging from the front room ceiling, which is right underneath the upstairs neighbor's front room floor. I don't use it much because I don't need the them knocking on my door either.

The apartment I live in is a ground floor unit with no private outside area of any kind. I am also located right next to a freeway overpass so I am blocked, signal wise, to the north west. I have a high rise building to my north a quarter of a mile. I think you get the idea. I move in to the place before I got interested in Ham Radio. I don't move because it's only about a mile from where I work, and the rent is reasonable.

So I suppose that the "special security" found at "Keydowns" is just for good looks? One was just held here in the Detroit area which claimed a local motorcycle gang was hired for the security detail. I suppose nobody gets an adrenaline rush going to one of these events to see if the FCC has the nerve to show up and bust someone?

www.bigradios.com

I don't doubt you will find some who don't get a thrill, but I think many do, and just don't talk about it much.

This is exactly the opposite of the reception I received in 1993.

The XYL and I were vacationing in the area, and I convinced her to go to Hq. with me. She has no interest in ham radio, but figured it wouldn't be too boring. We were warmly received, and got a complete tour from Mike, WB8IMY (I think). Saw all the departments, chatted with VP Rinaldo, all sorts of stuff. Saw the lab and they apologized because Zack wasn't in that day. (I later met him at a hamfest). Spent quite a while at the office building - the XYL was fascinated and kept asking questions.

Then we went over to W1AW and I operated the Ten Tec station. Had brought my bug and a collection of cables along "just in case" (....ze barracuda iz alwaze prepared....). Worked W3ANX on 40 CW. It was truly wonderful to sign the famous call "W1AW".

The prevailing "addy-tood" was one of "WELCOME!!!".

I didn't hear any "arrogant, cynical snarls" that day.

I later had reason to work with Al Brogdon, K3KMO, on a QST article (somebody
had to edit my stuff, and he got short straw). Great guy to work with, even
when we disagreed. Learned a lot about writing for publication from Al.
>>

I've had exactly the opposite experience, with both past and present Directors
and Vice Directors, Hq staff, and various appointees. Even when we disagreed, I
always came away with the impression that I'd gotten a fair hearing. Also came
away with a good understanding of the other side's position.

I brought the camera and the XYL to take the photos. Gotta be prepared.

  The effect that pirate b/c has on ham radio is to foster the idea
  that it's an OK thing to operate in complete defiance of radio law
  and the FCC.

> Amateur Radio?

I sense that you grew defensive over my question. Let's take charities
as an example, Ed. When a charity makes a report on its operation, it
states that x amount of what it takes in annually is spent on its
administrative costs and that x percentage goes toward doing the work of

the charity. Of course we all know that the administrative expenses actually go toward doing the work of the charity in that the lights must be on, people must travel, postage expenses and telephone bills must be paid.

While not a charity but a non-profit corporation, the League spends a certain amount of its money in the quest for even more money in requests for donations to cover W1AW renovation, gifts to the Foundation, donations for WARC expenses and the like. A certain percentage of League resources are earmarked for this fundraising. The ARRL also has, as it must, a percentage of its annual budget earmarked for operating expenses. You flying in an airplane doesn't do a thing for amateur radio. You staying in a hotel doesn't do a thing for amateur radio. You eating a meal does nothing for amateur radio. You attending a conference requiring transportation, lodging and meals may do something for amateur radio.

Now, based on what I've outlined above, can you provide an answer to the question which you yourself posed?

No kidding. The La-la Land Artifact Sherlock strikes once again.
>
As a matter of fact Lenny, not that you would have clue one of course,
but there was an enormous volume of ham literature already in print
about ham experimentation in the frequencies above 30 mHz. in 1950.
Some of it involving equipment which operated at 400 mHz and much
higher. UHF acorn tubes like the 954 & 955 were 30s things. The
catalog off-the-shelf *1936* National 1-10 receiver tuned 1 to 10
meters. 1936. Got that Lenny?
>
Then in 1959 came the RCA UHF Nuvistors . . I'm sure you know all
about those Lenny and the noise figures they had at 500 mHz? Which
wound up in any number of QST UHF gear construction articles.

"Technological backwardness" it most certainly isn't.

What it IS is this: you heard it as audio. Send them a copy of what you heard, not your impression, narrative or digest of what you heard without the "source material".

Then, the FCC enforcement folks (agents) will hear it just as you heard it and on the basis of that decide what the proper course and priority of action is.

If in fact it ever gets to trial, the judge will be very loath to admit a statement, written narrative or even a word-for-word transcript into evidence without the recording. This is known as the "best evidence rule".

>(I'd hardly call many of them "linear.")
>
>Particularly when the ads claim they are run "Class C" for more power
>output. 8-)

Leland, I surely don't like em'...but I've got to admit, they're not all "Class C." The guys that run the so-called "competition" garbage run extremely dirty Class C junk. (X-Force, Dave Made, Messenger, etc.) Some of the more serious fellows run the AB-1 stuff on sideband. (Texas Star, Skywalker, etc.)

Please remember that although I'm aknowledging the distinction between the two, I'm in no way condoning the operation of illegal amplifiers on 11 meters. I just want to make sure you don't paint em' all (legal CBers or "freebanders") with the same "www.bigradios.com mentality" brush. Leland, we both know we disagree but I hope you know where I'm coming from. I certainly try to understand your points of view as well. Thanks.

>motorcycle gang was hired for the security detail. I suppose nobody gets an
>adrenaline rush going to one of these events to see if the FCC has the nerve
>to show up and bust someone?

I've never been to a "Keydown." If you've read my posts in the past, (...and I assume you have since you've replied to many of them.) you know that I have indeed "freebanded" for a ten year stretch. I operated exclusively on sideband and felt no need to run more than the 30 watts my AR-3500 generated. I think the problem here is the generalization you make in believing that www.bigradios.com is representative of all "freebanders." Feel free to disagree but I assure you, it just is not so...and I speak from first hand experience, not supposition.

Here's a site that is a bit more indicative of the sheer spread of the 11 meter "DX" community. It should give you a little more "data" to work with when drawing your conclusions re. the "thrill" factor you seem to assign to the majority of "freebanders."

http://www.valkcom.net/portal/

...and this is only some of the 11 meter DX groups. Hmmm, some are even advertised as 11 meter AND amateur radio organizations...imagine that! Do you suppose there are any amateurs among the "freebanders?"
>I don't doubt you will find some who don't get a thrill, but I think many
>do, and just don't talk about it much.
>

I disagree with you, but hey...I'm only talking from experience. Take care and 73.

Mark

Hi Ed and Bert,

I rather enjoyed your open discussion on this topic. There certainly isn't much I could add, however...

>>I'd rather see the "freebander" eliminated by educating him/her and gently
>>nudging them in the right direction.

>
>I agree.
>
>> In order to educate someone, you need to
>>make that person "approachable." You do NOT accomplish this by calling them
>a
>>"chicken bander" or interfering with their legal efforts re. a FCC rule
>>making proposal.

Very well said and refreshing to see such meaningful dialog.

>Interfering with their efforts would, IMHO, be a bad thing. To my knowledge,
>that didn't happen; no one prevented them from filing an FCC rulemaking or
>from
>making comments on same. Comments of those with a different view were filed,
>but that is a process of law. To use that process of law to justify illegal
>acts in any way is simply not logical.

But nobody was using the "process of law to justify illegal acts in any way." RM-9807 was an legitimate proposal to remove the 155.3 mile limit from legal CB operations. No "illegal" activities were encouraged or glorified. Had the members of the league commented against this proposal as "citizens," (thus CB operators) this could not be construed as interference by the league. However, The ARRL (and NAB) commented against this proposal leveraging the full weight (for what it's worth) of ORGANIZATIONS who represent interests OTHER than CB. I'm quite sure if the USCB somehow managed to negatively affect an ARRL proposal, hams would likewise be up-in-arms. I respect your point of view but I certainly disagree with it.

>Do you really think most freebanders or those who shoot skip on 11 meters are
>not aware of Amateur Radio and what can be done within it?

No I don't but there's got to be a reason some don't "make the jump." That's where we (Yes, we!) need to focus our attention...communication. (no pun intended) Let's find out why. I certainly don't think you'll find that silly "adrenaline rush" theory holding much water.

>Many of the people I consider friends on this forum do not share my views on
>every issue. Over the years, I think we have learned from each other,
>though,
>and that could only happen if disagreement was cordial and if we both
>recognized that the other person reached a different conclusion from the
>available data. That happens, and somehow, by talking it out, sometimes some
>really cool things and unexpected understandings can result.

I hope that I can someday be counted among those you consider "friends on this forum." I hope that with each round of "meaningful discourse" we enjoy, we inch closer to the "middle ground" of understanding. You and Bert have set a wonderful example of this for others on the NG. Take care and 73.

Mark

A martyr isn't a martyr until he is dead.  How many will take up arms to
fight for the memory of their fallen nut bag comrade?  Now how many would
have followed his words from in prison?  Same number huh ... well then what
good did killing him do but give ya the finality sense of vengeance.

Hi Zehr. This little program is just 7 kB long, but features outstanding
programming with very solid teaching algorithms. I used it to learn
the letters and numbers and get up to
10 WPM in about two weeks, making the 5 WPM test a cinch. It's only
deficiency is it does not teach punctuation or prosigns, but they are
easily memorized.

> intended) Let's find out why. I certainly don't think you'll find that silly
> "adrenaline rush" theory holding much water.

There is another point to consider why some don't gravitate to Ham Radio. That can be found in the FCC's reply denying the proposal where it was stated it was not the intention of the FCC to create another "hobby radio service". I may have a wee bit of that wrong, but that's what I remember reading. CB radio has in fact become a de-facto hobby radio service as it stands now. Removing the DX limitation would only further blur the differences between Ham and CB. I understand that many countries outside of North America require one or both stations in communications to be a mobile station, just to prevent the situation we have here. CB radio was originally intended as a low power communication service for use by the public to conduct personal and business related activities. I doubt the FCC ever thought CB would turn in to a "hobby radio service". So if you don't like the "adrenaline rush" theory as a partial answer, then consider we have a "hobby radio service" that provides many of the benefits of H.F. access, legalities aside for now, complete with the use of amplifiers etc., without any license requirements. It's hard to compete with a "hobby radio service" where for a few bucks for a "Linear" and an "Export Radio" one can be on the air without having to pass those pesky written exams, a code test, and no Part 97 license crap cramping their style. 8-))

So you could say that the ARRL, and Amateur Radio as a whole, has a growing competitor called "CB-Radio" for the hearts and minds of people interested in two-way radio as a hobby. In that light I can understand why the ARRL got involved with the RM-9807 proposal, it was a legitimate interest in trying

to insure the growth of Amateur Radio by making CB Radio, the alliterative
"hobby radio service", less attractive.

I find it rather funny myself that Alan Dixon, who filed the original RM-9807, is a Ham. It would be a little more clear cut if the person who should have filed the request was a CBer, without a Ham ticket.

Hi Leland,

You left your flank open on this one. I'm not going to respond to this one as I
believe someone else answered this response much more capably on a different
forum. As they say on the local repeater, "Over to you, Mark." Take it easy,
Leland.

>I'm not an expert on cocaine but I believe that crack cocaine is just
>crystallized powered cocaine. I should have said "quite similar".

And my response would have been the same. "Similar" or "quite similar" matters not...A single atom can leave it "similar", but radically alter what you get in the long run.

>The
>real-world reason that crack cocaine has higher penalties than powered
>cocaine is racism.

Again...this is not correct. Crack cocaine is more addictive and more devastating to the body. That it is, unfortunately, the "drug of choice" of certain minority groups only bears out that fact.

>The real reason that marijuana was made illegal in
>the Southwestern states was to try to control the citizens of Mexico.

OK...SO why has it been illegal in the REST of the United States, where, except for the PR population in NY, there has been a very small Hispanic populace until the last few years...?!?!

Cecil:

I think the description you're struggling to recall is "practical, effective, efficient, and universal." Do a Google search on my postings, and you'll find that repeated, er, well, repeatedly! However, I don't think you'll find where I've indicated that there is anything "supernatural" about the Morse/CW mode. Yet another of your failed attempts to put words into my fingertips that I never typed. Shame on you!

Your boys, technician class hams N8WWM and N7VCF are causing a lot of hate and discontent on the cb radio newsgroup. It would be sincerely appreciated if you would extract these two human mistakes from our mist and take them out somewhere and give them a spanking with a rolled up newspaper. Please help. This request is sincere and hopefully the self policing ham radio community will get these twits a new home. Thanks.

As I understand it, both of those guys are active CB users, so both have just as much right to be in the rec.radio.cb newsgroup as you do. Therefore, if you don't happen to like what they have to say, then I guess you'll just have to live with it.

>"Over to you, Mark."

Kerchunk...oops, sorry! I've got it, Bert. Thanks.

This was cut from one of my responses to a post along similar lines on the eHam.net article. It's close enough to fit the bill.

"There are those who might say that if you want to work DX then become a licensed amateur or that 11 meters operators are somehow "imitating" amateur radio. I don’t’ really think 11 meter operators who violate the 155 mile rule are imitating amateur radio. To state such does a great disservice to amateur radio as a whole. Those on 11 meters are responding to a naturally occurring phenomenon, sky wave propagation. Nobody goes out there and says I’m engaging in "pseudo-ham" operations, again, that’s experience talking now. Think of the sheer breadth of amateur radio’s scope…EME, (Moonbounce) OSCAR, Packet, (Although now being utilized on 11 meters too, along with some CW…isn’t THAT something?) AMTOR/PACTOR, PSK31, space shuttle contacts, etc…and the list goes on with a variety of bands and modes to boot. Do you really believe that some unauthorized 11 meter operators are imitating amateur radio because they engage in worldwide communications in a 594.8KHz slice of the HF spectrum? Give a little more credit to the full scope of amateur radio than that. If WE are going to solve this, then WE will have to try and do it together. Any time two opposing factions attempt to resolve an issue, compromise is needed. This is often the sticking point as a line in the sand is usually drawn by those ostensibly on the high & righteous road. This nonsense has gone on for more than thirty years now and without some compromise on BOTH sides of the equation, it will outlive both you and I. There comes a point in time where we must examine the "big picture" and decide that our inability to rise above our differences is far outweighed by the need to achieve a real-world solution, even if it necessitates a compromise. I would look for amateur radio to set the "bigger" example by NOT embracing the "I had to walk to school uphill in the snow, both ways…so you do too!" approach. You can already see what that’s done for the CW argument within amateur radio itself."

Bottom line, I don't think there's any blur between the services. The only result of the RM-9807 fiasco is a little more ill-will between the two "hobbies." I don't think the reaffirmation of any "written" (not to mention, outdated) definition of a service is worth taking a step backward re. the relationship between 11 meters and amateur radio. Agree or disagree, the two services/hobbies are somewhat dependent on one another. Take care and 73.

I distinctly remember you saying CW is the "most practical, effective,
efficient, and universal ..." which would put it into the supernatural
realm compared to PACTOR II, for instance. If it is everything you say,
why doesn't the military use it?

All CBers have been demonized but they are not all to blame.
A small percentage of CBers are to blame for the CB problems.
A small percentage of hams are to blame for the ham problems.

Isn't the delivery system the only difference? Smoking tobacco is more
addictive and more devastating to the body than snorting snuff tobacco.
